

Compaq Service User Guide

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

Getting Started with OpenVMS System Management gives new VMS system managers a jumpstart in managing this powerful and reliable operating system. Dave Miller describes the essentials of what an OpenVMS System Manager will have to manage. He defines areas of OpenVMS System Management and describes why each is important and how it fits into the larger management task. Even though some OpenVMS management concepts are unique (for instance quotas), many concepts (such as account creation) have counterparts in UNIX and Windows NT. So, wherever possible, Miller points out to his readers the parallel to other systems. The book is intended as a precursor to Baldwin's OpenVMS System Management Guide and various OpenVMS documents. Thus it refers the reader to other books for the detailed management steps. Getting Started with OpenVMS System Management is a great introduction to the material Steve Hoffman and Dave Miller are revising for the OpenVMS System Management Guide, 2E. - Permits experienced system managers to begin managing OpenVMS more quickly - Dovetails with other Digital Press publications for easier reference by the OpenVMS manager - Points you in the right direction for the complete documentation on each issue - BONUS FEATURE! Includes excerpts from five key DP OpenVMS books

Experience firsthand what makes online information work and why Standards for Online Communication gives you guidelines for how to place information online within your company. It provides both a design and development process and a set of guidelines for the Internet, intranets, and help systems for designers and authors who need to create effective electronic information. Drawing on their design and consulting experience, authors JoAnn Hackos and Dawn Stevens demonstrate how to judge what will work for your users, how to translate users' needs into a set of clear specifications, and how to implement these specifications. Using examples of good design, they provide expert advice and guidance on: * Giving customers and employees the online information they need to do their jobs * How to organize online information so your users can easily navigate through it * Dealing with the special design requirements of the Web, intranets, and online help systems * What graphics users really need and where sound and video fit in * The issues involved with accessibility and navigation-multimedia, maps, indexes, hypertext, and more On the accompanying CD, you'll find a winhelp file of the book designed according to the principles taught in the book. Whether you are a webmaster, user-interface designer, content creator, or technical writer, with Standards for Online Communication you'll experience firsthand what makes online information work and why. Visit our Web site at: <http://www.wiley.com/compbooks/>

The Quick Start Reference Guide provides an overview of the installation and evaluation process, and additional resources.
