Moderate Procedural Sedation and Analgesia - E-Book

January 1985 Through December 1992

: 533 Citations

In retrospect, the dosage of IV sedatives used in the early days of endoscopy both in the USA and Great Britain was frequently too high. Today we are much more careful in the way we sedate patients being acutely aware of the fact that if the patient becomes unresponsive and verbal contact is lost then, by definition, a general anaesthetic has just been administered with all the clinical and legal implications that this holds. This expertly written

book examines all aspects of conscious sedation and will be an essential reference for nurses and other health professionals involved in the clinical care of patients undergoing diagnostic or therapeutic procedures that require conscious sedation. Each chapter covers a particular area of the practice of conscious sedation and the authors come from a wide spectrum of clinical specialities.

Practical resource for all healthcare professionals involved in day-to-day management of operating rooms of all sizes and complexity.

This 2nd edition focuses on the preprocedural, procedural, and postprocedural care of the moderately sedated patient. It is

designed for any clinician involved in the administration of moderate sedation and written by a clinician involved in the practice on a daily basis. The primary focus of this new edition is to provide all the content and tools necessary to demonstrate competency in moderate sedation/analgesia. Includes a greater focus on the core competencies necessary for clinical practice. Concept Checks are integrated throughout to help the learner assess the mastering of the content presented. Includes the recommended standards of practice from the ANA, AORN, American Academy of Pediatrics, and JCAHO's Sample Policies & Procedures. Contains sample clinical competencies for

moderate sedation so the book can be used as a study guide and measurement tool. Incorporates throughout important information on the specific moderate sedation parameters of the pediatric and geriatric patients addressing preprocedural assessment, physiologic variations, pharmacologic considerations and sedative techniques. Includes a comprehensive pharmacologic profile of each medication used in the moderate sedation practice setting. Follows a recommended 'core curriculum' format, but each idea and concept are discussed in detail. Increased integration of actual Clinical Scenarios facilitates the application of content knowledge and utilization of critical thinking skills.
