In this highly readable and provocative book, Thomas Newkirk explodes the long standing habit of opposing abstract argument with telling stories. Newkirk convincingly shows that effective argument is already a kind of narrative and is deeply "entwined with narrative." --Gerald Graff, former MLA President and author of Clueless in Academe Narrative is regularly considered a type of writing- often an "easy" one, appropriate for early grades but giving way to argument and analysis in later grades. This groundbreaking book challenges all that. It invites readers to imagine narrative as something more-as the primary way we understand our world and ourselves. "To deny the centrality of narrative is to deny our own nature," Newkirk explains. "We seek companionship of a narrator who maintains our attention, and perhaps affection. We are not made for objectivity and pure abstraction-for timelessness. We have "literary minds" that respond to plot, character, and details in all kind of writing. As humans, we must tell stories." When we are engaged readers, we are following a story constructed by the author, regardless of the type of writing. To sustain a reading-in a novel, an opinion essay, or a research article- we need a "plot" that helps us comprehend specific information, or experience the significance of an argument.

As Robert Frost reminds us, all good memorable writing is "dramatic." Minds Made for Stories is a needed corrective to the narrow and compartmentalized approaches often imposed on schools-approaches which are at odds with the way writing really works outside school walls.

A central theme throughout the impressive series of philosophical books and articles Stephen Toulmin has published since 1948 is the way in which assertions and opinions concerning all sorts of topics, brought up in everyday life or in academic research, can be rationally justified. Is there one universal system of norms, by which all sorts of arguments in all sorts of fields must be judged, or must each sort of argument be judged according to its own norms? In The Uses of Argument (1958) Toulmin sets out his views on these questions for the first time. In spite of initial criticisms from logicians and fellow philosophers, The Uses of Argument has been an enduring source of inspiration and discussion to students of argumentation from all kinds of disciplinary background for more than forty years.

The tipping point is that magic moment when an idea, trend, or social behavior crosses a threshold, tips, and spreads like wildfire. In The Art of Rhetoric, Aristotle demonstrates the purpose of rhetoric—the ability to convince people using your skill as a speaker rather than the validity or logic of your arguments—and outlines its many forms and techniques. Defining important philosophical terms like ethos, pathos, and logos, Aristotle establishes the earliest foundations of modern understanding of rhetoric, while providing insight into its historic role in ancient Greek culture. Aristotle's work, which dates from the fourth century B.C., was written while the author lived in Athens, remains one of the most influential pillars of philosophy and has been studied for centuries by orators, public figures, and politicians alike. Abbott helps social science students discover what questions to ask. This exciting book is not about habits and the mechanics of doing social science research, but about habits of thinking that enable students to use those mechanics in new ways, by coming up with new ideas and combining them more effectively with old ones. Abbott organizes his book around general methodological moves, and uses examples from throughout the social sciences to show how these moves can open new lines of thinking. In each chapter, he covers several moves and their reverses (if these exist), discussing particular examples of the move as well as its logical and theoretical structure. Often he goes on to propose applications of the move in a wide variety of empirical settings. The basic aim of *Methods of Discovery* is to offer readers a new way of thinking about directions for their research and new ways to imagine information relevant to their research problems. *Methods of Discovery* is part of the *Contemporary*

This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

With more than 400,000 copies now in print, The Craft of Research is the unrivaled resource for researchers at every level, from first-year undergraduates to research reporters at corporations and government offices. Seasoned researchers and educators Gregory G. Colomb and Joseph M. Williams present an updated third edition of their classic handbook, whose first and second editions were written in collaboration with the late Wayne C. Booth. The Craft of Research explains how to build an argument that motivates readers to accept a claim; how to anticipate the reservations

of readers and to respond to them appropriately; and how to create introductions and conclusions that answer that most demanding question, "So what?" The third edition includes an expanded discussion of the essential early stages of a research task: planning and drafting a paper. The authors have revised and fully updated their section on electronic research, emphasizing the need to distinguish between trustworthy sources (such as those found in libraries) and less reliable sources found with a quick Web search. A chapter on warrants has also been thoroughly reviewed to make this difficult subject easier for researchers Throughout, the authors have preserved the amiable tone, the reliable voice, and the sense of directness that have made this book indispensable for anyone undertaking a research project.

elaborated, especially as they inform pedagogies of argumentation and composition. John Ramage, Micheal Callaway, Jennifer Clary-Lemon, and Zachary Waggoner present methods of teaching informal fallacies and analyzing propaganda, while also providing a rationale for preferring an argument approach over other available approaches to the teaching of writing. The authors also identify the role of argument in pedagogies that are not overtly called argument, including pedagogies that foreground feminism, liberation, critical cultural studies, writing across the curriculum, genre, service learning, technology, and visual rhetoric. The lists of further reading and the annotated bibliography provide opportunities for learning more about the approaches presented in this indispensable guide. The Art of Questioning

Featuring a new introduction, this updated edition of the New York Times bestselling classic by Pulitzer Prize and National Book Award–winning author and one of the most revered figures in American letters is “profound and priceless as guidance for anyone who aspires to write” (Los Angeles Times). Born in 1909 in Jackson, Mississippi, Eudora Welty shares details of her upbringing that show us how her family and her surroundings contributed to the shaping not only of her personality but of her writing as well. Everyday sights, sounds, and objects resonate with the emotions of recollection: the striking clocks, the Victrola, her orphaned father’s coverless little book saved since boyhood, the tall mountains of the West Virginia back country that became a metaphor for her mother’s sturdy independence, Eudora’s earliest box camera that suspended a moment forever and taught her that every feeling awaits a gesture. In her vivid descriptions of growing up in the South—of the interplay between black and white, between town and countryside, between dedicated schoolteachers and the children they taught—she recreates

the vanished world of her youth with the same subtlety and insight that mark her fiction, capturing “the mysterious transfiguring gift by which dream, memory, and experience become art” (Los Angeles Times Book Review). Part memoir, part exploration of the seeds of creativity, this unique distillation of a writer’s beginnings offers a rare glimpse into the Mississippi childhood that made Eudora Welty the acclaimed and important writer she would become. This engaging and highly regarded book takes readers through the key stages of their PhD research journey, from the initial ideas through to successful completion and publication. It gives helpful guidance on forming research questions, organising ideas, pulling together a final draft, handling the viva and getting published. Why our workplaces are authoritarian private governments—and why we can't see it One in four American workers says their workplace is a "dictatorship." Yet that number almost certainly would be higher if we recognized employers for what they are—private governments with sweeping authoritarian power over our lives. Many employers minutely regulate workers' speech, clothing, and manners on the job, and employers often extend their authority to the off-duty lives of workers, who can be fired for their political speech, recreational activities, diet, and almost anything else employers care to govern. In this compelling book,
