This book is for upper-level students, managers and academics who are interested in exploring the messy reality of the contemporary workplace and in considering how things might be done differently. In particular, it offers a critical perspective on Book & CD. This fourth edition makes it clear that all who are interested in the sustainability of South Africa -- and Africa -- must put human resource management (HRM) at the very core of the management of organisations generally. The content is aligned to outcomes that are geared towards analytical and critical thinking about the theory and practice of HRM in South Africa. The African context is addressed, and ample information about HRM aspects 'elsewhere in Africa' is provided. This edition breaks away even further from the traditional structure of so many standard HRM textbooks. It challenges a broadening of the 'agenda' and scope of HRM work: HRM is not only about managing employees, but also about managing the work and the people who do the work of and in organisations. This may involve alternative ways of getting the work of organisations done superiorly. This book will help you to apply HRM effectively to achieve its ultimate aim, namely to add value to people, to organisations and to society. This comprehensive book is organised around themes such as: Developing an appreciation for the context of HRM in South Africa; Strategising, designing and planning as preparatory HRM work; Sourcing work talent; Facing the countrys people empowerment challenge; Meeting the reward and care challenge; Handling labour and employee relations challenges; Championing change and transformation; Managing HRM-related information, including HRM and sustainability reporting. Based on most recent theoretical developments, the emphasis is on the practical applications. Samples of relevant documents are included, and an accompanying CD contains a wealth of relevant resources as well as a continuing, integrating case study that serves as a basis for these applications, and individual and group activities. As a package, South African Human Resource Management will be extremely valuable to both current and aspirant managers, and human resource practitioners.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters. Neurorehabilitation is an expanding field with an increasing clinical impact because of an ageing population. During the last 20 years neurorehabilitation has developed from a discipline with little scientific background, separated from other medical centers, to a medical entity largely based on the principles of 'evidenced based medicine' with strong ties to basic research and clinical neurology. Today neurorehabilitation is still a 'work in progress' and treatment standards are not yet established for all aspects of neurorehabilitation. There are very few books that address contemporary neurorehabilitation from this perspective. This volume moves the reader from theory to practice. It provides the reader with an understanding of the theoretical underpinnings of neurorehabilitation, as well as a clear idea about how (and why) to approach treatment decisions in individual patients. These clinical recommendations are based on a mix of established evidence and clinical experience that the authors bring to bear on their topics.

Often the finest artists do not make the best teachers. Many frustrated college students of art know this all too well as they suffer through unstructured classes with inexperienced teachers or graduate student instructors. In these situations, it is easy to blame the teachers. But the problem is largely institutional: most students graduating with MFAs from art schools receive little if any instruction in teaching art. If you find yourself in this predicament as teacher or student, this book is for you. The first book to provide a comprehensive guide for teaching college-level art, *The Art of Teaching Art* is the culmination of respected artist and instructor Deborah Rockman's two decades of teaching experience. Believing that drawing is the backbone of all of the visual arts, she begins with a complete explanation of drawing concepts that apply to any subject matter, e.g., composition, sighting processes, scaling techniques, and methods for linear and tonal development. She then illustrates these concepts with step-by-step methods that easily translate to classroom exercises. Next, she applies the drawing principles to every artist's most important and challenging subject, the human figure. After an extended section on understanding and teaching perspective that explores illusionistic form and space, the focus of the book shifts to the studio classroom itself and the essential elements that go into making an effective learning environment and curriculum. From preparing materials lists and syllabi, to setting up still-lives, handling difficult classroom situations, critiquing and grading student artworks, and shooting slides of student artworks, she leaves no stone unturned.

A kitchen classic for over 35 years, and hailed by Time magazine as "a minor masterpiece" when it first appeared in 1984, *On Food and Cooking* is the bible which food lovers and professional chefs worldwide turn to for an understanding of where our foods come from, what exactly they're made of, and how cooking transforms them into something new and delicious. For its twentieth anniversary, Harold McGee prepared a new, fully revised and updated edition of *On Food and Cooking*. He has rewritten the text almost completely, expanded it by two-thirds, and commissioned more than 100 new illustrations. As compulsively readable and engaging as ever, the new *On Food and Cooking* provides countless eye-opening insights into food, its preparation, and its enjoyment. *On Food and Cooking* pioneered the translation of technical food science into cook-friendly kitchen science and helped birth the inventive culinary movement known as "molecular gastronomy." Though other books have been written about kitchen science, *On Food and Cooking* remains unmatched in the accuracy, clarity, and thoroughness of its explanations, and the intriguing way in which it blends science with the historical

evolution of foods and cooking techniques. Among the major themes addressed throughout the new edition are: · Traditional and modern methods of food production and their influences on food quality · The great diversity of methods by which people in different places and times have prepared the same ingredients · Tips for selecting the best ingredients and preparing them successfully · The particular substances that give foods their flavors, and that give us pleasure · Our evolving knowledge of the health benefits and risks of foods On Food and Cooking is an invaluable and monumental compendium of basic information about ingredients, cooking methods, and the pleasures of eating. It will delight and fascinate anyone who has ever cooked, savored, or wondered about food.

The book focuses on how knowledge is being transformed and managed at companies for competitive advantage and as well as for economic benefits. Companies should take it upon themselves to appoint people who are capable of uplifting their knowledge base and enhancing their organization's intellectual property; they should appoint people who are in a position to learn fast and adjust to internal as well as to external forces of change. Thus, training and development should form part and parcel of a company that is prepared to move ahead of its competitors. Through the right channels of addressing constant changes that are taking place in the market, the company should have a special way of doing business and of possessing special knowledge that will put it ahead of its competitors. The book is written in the academic format but can be well understood by readers who are not experts in the field, as academic jargon is used to the minimal. It is written in simple language which could be understood by readers who have a reasonable mastery of the English language. The book has 58 pages, 16 606 words; it also has 3 figures and 2 tables. The glossary is provided at the end of the chapters to assist the readers who may not be familiar with certain concepts.

This classic textbook sets out clearly and concisely how to evaluate symptoms and elicit relevant physical signs. It describes the practical skills which every clinician must acquire and develop in order to evolve diagnostic procedures and management strategies and plans. 'Highly Commended' in the 2006 and 2010 BMA Medical Book Competitions, this Thirteenth Edition contains over 500 clinical photographs and diagrams to illustrate the text, with new topics added to make the book even more comprehensive. This Thirteenth Edition has four sections: History taking and general examination. System examination covering symptoms and signs. Examination in special situations including babies & children and the critically ill. How to pass an OSCE. Included on the Student Consult site are the specially-recorded videos demonstrating many of the clinical examination routines described in the main text. The book starts with a general overview section on history taking and the general examination that provide the framework on which to hang the detail. The systematic examination section documents clearly the relevant history, examination and special investigations as well as giving advice on their significance. The third section covers examination in specific situations and emphasises an integrated and structured approach to these patients. A final section spells out how to demonstrate the techniques learned in the book in an OSCE. Macleod's is closely linked to its sister publication, Davidson's Principles & Practice of Medicine, which complements the information in this text. Available with full online access on Student Consult and ancillary videos demonstrating key clinical examination routines following the format laid out in the book. There are two new chapters on examination in specific situations: The frail elderly The adult with fever A new section explicitly spells out how to demonstrate the techniques learned in the book in an OSCE and other formative and summative examinations. Over 50 new text boxes highlight the evidence-base for the examination techniques discussed. An Advisory Board of students, junior doctors, and representatives from the nursing, ambulance, Primary Care and academic communities from six countries has made detailed comments and critically appraised the entire book. The text has been substantially rewritten with more on medically unexplained symptoms in the History Taking chapter and extended coverage of diabetes mellitus in the Endocrine System chapter. Integrated with the online text are

clinical examination videos of trained professionals performing many of the examination routines described in the book with an accompanying commentary by the Editor, Professor Colin Robertson Two new videos show how the Glasgow Coma Scale should be performed in clinical situations, demonstrating the correct techniques and also common pitfalls in using the GCS.

Constructed around a simple scientific management model this text focuses on the basic management principles that need to be applied in a business. After an introductory overview of management, the management model, and the environment in which the manager functions, are four chapters dealing with planning, organizing, leadership and control. In conclusion, aspects such as small business and multicultural management are explored.

The world is in a constant state of flux, and this influences the operations of every business and organisation. Business Management: A Contemporary Approach deals with these changes by covering the functions of a business or an organisation and then addressing the contemporary issues that affect them. These issues include globalisation, corporate entrepreneurship and citizenship, credit, diversity and HIV/AIDS. Every student of business and business manager needs to understand the importance of these issues and their influence on the operations of a business. Business Management: A Contemporary Approach also highlights the interdependency between the various business functions. This interdependency is very important for a business or organisation to operate as a whole.

There is growing pressure and stress placed on organisations to fight for customers and service/product placement in an increasingly competitive global marketplace. It has, therefore, never been more important to get the best out of the workforce. To achieve this, the role of the leader can be a fundamental factor in organisational success or failure. Leaders need to have the requisite skills to reflect the demands placed upon them in the 21st century. There are the "accidental managers" who just drop into the role of leadership and others who may develop skills and knowledge in readiness for a leadership role. There are also those who may have the innate ability to lead. Within the mix are those who are characterised by traits associated with the "dark triad" or who may use "pathocratic influence" on others to conform, reinforcing values (or lack of values) associated with toxic leadership. They create damage and harm. They become "passion killers". The result can lead to a "pathocracy". This book discusses the role emotional intelligence plays in helping people deal with stressful and challenging experiences, suggesting different ways to cope. The author reflects on the values that are integral to the success or failure of an organisation. "Passion" is identified as an added value that can differentiate one organisation from another. If passion is harmed, it can affect motivation, creativity, output, performance, and productivity. Therefore, this book provides the reader with examples of "passion killing" while making suggestions as to factors that can be adopted to engage and encourage passion. Conclusions are drawn and recommendations made to support those faced with "passion killers". This book is aimed at those of all ages and educational backgrounds interested in developing their leadership knowledge and skills. It is also aimed at those interested in learning more about differences in personality, emotional intelligence, stress, coping, values, and the importance of understanding the impact of "passion killers".

This book outlines perspectives of emerging and established African scholars on what one could describe as the debate on leadership and the articulation of the life of the mind in Africa's socio-economic, political and cultural life from the time of independence to date. The papers contained in the book cover the following thematic areas: Alternative Leadership Paradigm for Africa's Advancement; African Perspectives on Globalisation and international relations; Pan-Africanism and the African Renaissance; Scientific, Technological and Cultural Dimensions of African Development. The first section deals with alternative leadership paradigms for Africa's advancement. It also debates the 'thin line' separating management studies from leadership studies and untangles the hermeneutic complexities in the term 'leadership'. Section two examines among other things, the crucial challenge of globalisation and public ethics and others African perspectives. The section also interrogates the current complexities and credibility deficits in the global governance of trade and towards the end engages philosophical questions about conscience and consciousness in African development and progress. The debates in section three continue to section four and focus on the overall issues of language and liberation, the significance of Multi-, Inter and Trans-Disciplinary Approaches in the analysis of the African continent, appropriate indigenous paradigms for promoting the African renaissance as well as a series of debates on the meaning and prospects of regional integration in Africa's renewal. This provides just a snapshot of a very wide ranging and interesting debate contained in the publication.

Book & CD. To improve on an award-winning book poses a major challenge to its authors. The authors of this book took the challenge head-on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa, and the rest of Africa. The findings of this study, which dealt with current and near-future management issues, as well as classical and contemporary thinking about management, were used as the blueprint for the updating of this book. After placing management in context, the authors deal with the knowledge, skills and dispositions required of managers to perform the management functions of planning, organising, leading and controlling in a volatile business world. Examples of how the functions are applied in practice are cited throughout the book. These examples refer mainly to South African organisations and situations that managers in South Africa, and Africa, have to deal with to create and sustain a competitive advantage for their organisations. The book endeavours to break down the silo effect of seeing the management functions as separate activities. This is done by continuously placing the management function at hand in a bigger

context. This enables learners of management to assess the implications of management decisions on different people, processes, systems and so on that make up the organisation.

This study details the results that successful managers at different levels of business must deliver within their organizations throughout Africa. It addresses current and near-future management issues through both classic and contemporary management thought. In addition to placing management in context, the book also explores the knowledge, skills, and dispositions required of managers to perform the management functions of planning, organizing, and leading in a volatile business world.

Over the centuries leading up to their composition many genres and authors have emerged as influences on Horace's Satires, which in turn has led to a wide variety of scholarly interpretations. This study aims to expand the existing dialogue by exploring further the intersection of ancient satire and ethics, focusing on the moral tradition of Epicureanism through the lens of one source in particular: Philodemus of Gadara. Philodemus was an Epicurean philosopher who wrote for a Roman audience and was one of Horace's contemporaries and neighbours in Italy. His works, which were preserved by the eruption of Vesuvius in AD 79 but have nevertheless not been widely read on account of their fragmentary nature, feature a range of ethical treatises on subjects including patronage, friendship, flattery, frankness, poverty, and wealth. *Epicurean Ethics in Horace: The Psychology of Satire* offers a serious consideration of the role of Philodemus' Epicurean teachings in Horace's Satires and argues that the central concerns of the philosopher's work not only lie at the heart of the poet's criticisms of Roman society and its shortcomings, but also lend to the collection a certain coherence and overall unity in its underlying convictions. The result is a ground-breaking study of the deep and pervasive influence of Epicurean ethical philosophy on Horace's Satires, which also reveals something of the poet behind the literary mask or persona by demonstrating the philosophical consistency of his position throughout the two books.

In this McKinsey Award-winning article, first published in May 1989, Gary Hamel and C.K. Prahalad explain that Western companies have wasted too much time and energy replicating cost and quality advantages their global competitors already experience. Canon and other world-class competitors have taken a different approach to strategy: one of strategic intent--begin with a goal that exceeds the company's present grasp and existing resources: "Beat Xerox"; "encircle Caterpillar." Then they rally the organization to close the gap by setting goals that focus employees' efforts in the near to medium term: "Build a personal copier to sell for \$1,000"; "cut product development time by 75%." Year after year, they emphasize continuous innovation--building a portfolio of competitive advantages; searching markets for "loose bricks" that rivals have left undefended; changing the terms of competitive engagement; playing by the leader's rules. The result is a global leadership position and an approach to competition that has reduced larger, stronger Western rivals to playing an endless game of catch-up.

This volume contains ten new essays focused on the exploration and articulation of a narrative that considers the notion of order within medieval and modern philosophy--its va

(natural, moral, divine, and human), the different ways in which each is conceived, and the diverse dependency relations that are thought to obtain among them. Descartes, with others, brought about an important shift in what was understood by the order of nature by placing laws of nature at the foundation of his natural philosophy. Vigorous debate about the proper formulation of the laws of nature and the moral law, about whether such laws can be justified, and if so, how-through some aspect of the divine order or through human reason-about what consequences these laws have for human beings and the moral and divine orders. That is, philosophers of the period were thinking through what the order of nature is and how to understand its relations to the divine, human, and moral orders. No two major philosophers in the modern period took exactly the same stance on these issues, but the issues are clearly central to their thought. The Divine Order, the Human Order, and the Order of Nature is devoted to investigating their positions from a vantage point that has the potential to combine metaphysical, epistemological, scientific, and moral considerations into a single narrative.

A Contemporary Approach

With the future of education being disrupted and the onset of day-to-day uncertainties and challenges that have to be solved quickly, teachers are now turning to professional development communities/support communities where they can share and learn about effective practices to use in the classroom. While transitioning to blended or online learning and keeping up with the technological advances in education, these communities provide an essential backbone for teachers to rely on for support and updated knowledge on what educational practices are being utilized, how they are working, and what solutions have been found for the ever-changing climate of education. Research on the benefits and use of these communities, as well as on the latest educational practices, is essential in teacher development and student learning in the current culture of a rapidly changing educational environment. The Research Anthology on Facilitating New Educational Practices Through Communities of Learning contains hand-selected, previously published research that provides information on the communities of learning that teachers are currently involved in to seek the latest educational practices. The chapters cover the context of these communities, the benefits, and an overview of how this support is a necessary tool in today's practices of teaching and learning. While highlighting topics such as learning communities, teacher development, mentoring, and virtual communities, this book is essential for inservice and preservice teachers, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students who are interested in how communities of practice tie into professional development, teacher learning, and the online shift in teaching.
