The new technologies, favored by the progress of cryptography and by the evolutions of the internet, are causing a radical change in the global economy, with particular reference to the financial sector, in terms of the methods of exchange of goods, services and any financial activity. Among the most significant applications of digital technology to the financial sector, the birth and spread of "cryptocurrencies" stands out. I created this guide to be able to put some order in the confusion that is in the minds of people who approach the world of cryptocurrencies and who are immediately submerged by graphs, unknown words, exchange methodologies and concepts that would otherwise be incomprehensible to those who does not already have a background knowledge on the subject, or in general, on the trading. For this we are going to analyze this world step by step. Once we have a basic preparation on the subject we will go to see materially which are the most famous cryptocurrencies, how they were born and how they work, and how they can be exchanged, owned, stored and even produced. We will see what are the best strategies that try to maximize gains and minimize losses, what are the best indicators to use for each strategy and what are the best strategies that can be used to trade Bitcoin and Ethereum. Strategies that can be adapted to any other Altcoin, such as the new rising Dogecoin and Shiba Inu. If you're thinking of buying cryptocurrency in the future, consider this... "If only I'd bought back then" Sound familiar? It probably does. The story of the idealists, technologists, and opportunists fighting to bring cryptocurrency to the masses. In their short history, Bitcoin and other cryptocurrencies have gone through booms, busts, and internecine wars, recently reaching a market valuation of more than \$2 trillion. The central promise of crypto endures—vast fortunes made from decentralized networks not controlled by any single entity and not yet regulated by many governments. The recent growth of crypto would have been all but impossible if not for a brilliant young man named Vitalik Buterin and his creation: Ethereum. In this book, Laura Shin takes readers inside the founding of this novel cryptocurrency network, which enabled users to launch their own new coins, thus creating a new crypto fever. She introduces readers to larger-than-life characters like Buterin, the Web3 wunderkind; his short-lived CEO, Charles Hoskinson; and Joe Lubin, a former Goldman Sachs VP who became one of crypto's most well-known billionaires. Sparks fly as these outsized personalities fight for their piece of a seemingly limitless new business opportunity. This fascinating book shows the crypto market for what it really is: a deeply personal struggle to influence the coming revolution in money, culture, and power.
