The Author Mike

Spolsky has been

building secure

software systems

since 1999. Early in

For every opportunity presented by the information age, there is an opening to invade the privacy and threaten the security of the nation, U.S. businesses, and citizens in their private lives. The more information that is transmitted in computer-readable form, the more vulnerable we become

to automated spying. It's been estimated that some 10 billion words of computer-readable data can be searched for as little as \$1. Rival companies can glean proprietary secrets . . . anti-U.S. terrorists can research targets . . . network hackers can do anything from charging purchases on someone else's credit card to
