The recipient of the Kluge Prize for lifetime achievement in the humanities and the Tang Prize for "revolutionary research" in Sinology, Ying-shih Yü is a premier scholar of Chinese studies. Chinese History and Culture volumes 1 and 2 bring his extraordinary oeuvre to English-speaking readers. Spanning two thousand years of social, intellectual, and political change, the essays in these volumes investigate two central questions through all aspects of Chinese life: what core values sustained this ancient civilization through centuries of upheaval, and in what ways did these values survive in modern times? From Yü Ying-shih's perspective, the Dao, or the Way, constitutes the inner core of Chinese civilization. His work explores the unique dynamics between Chinese intellectuals' discourse on the Dao, or moral principles for a symbolized ideal world order, and their criticism of contemporary reality throughout Chinese history. Volume 1 of Chinese History and Culture explores how the Dao was reformulated, expanded, defended, and preserved by Chinese intellectuals up to the seventeenth century, guiding them through history's darkest turns. Essays incorporate the evolving conception of the soul and the afterlife in pre- and post-Buddhist China, the significance of eating practices and social etiquette, the move toward greater individualism, the rise of the Neo-Daoist movement, the spread of Confucian ethics, and the growth of merchant culture and capitalism. A true panorama of Chinese culture's continuities and

transition, Yü Ying-shih's two-volume Chinese History and Culture gives readers of all backgrounds a unique education in the meaning of Chinese civilization.

A discussion of the author's confessionalization paradigm as a model for understanding European state formation

For at least two millennia before the advent of the Spaniards in 1519, there was a flourishing civilization in central Mexico. During that long span of time a cultural evolution took place which saw a high development of the arts and literature, the formulation of complex religious doctrines, systems of education, and diverse political and social organization. The rich documentation concerning these people, commonly called Aztecs, includes, in addition to a few codices written before the Conquest, thousands of folios in the Nahuatl or Aztec language written by natives after the Conquest. Adapting the Latin alphabet, which they had been taught by the missionary friars, to their native tongue, they recorded poems, chronicles, and traditions. The fundamental concepts of ancient Mexico presented and examined in this book have been taken from more than ninety original Aztec documents. They concern the origin of the universe and of life, conjectures on the mystery of God, the possibility of comprehending things beyond the realm of experience, life after death, and the meaning of education, history, and art. The philosophy of the Nahuatl wise men, which probably stemmed from the ancient doctrines and traditions of the Teotihuacans and Toltecs, quite often reveals profound intuition and in some instances is remarkably "modern." This English edition is not a direct translation of the

A History of Insanity in the Age of Reason

Aztec Thought and Culture

After challenging the multicultural effort to "provincialize" the history of Western civilization, this book argues that the roots of the West's exceptional creativity should be traced back to the uniquely aristocratic warlike culture of Indo-European speakers.

Michel Foucault examines the archeology of madness in the West from 1500 to 1800 - from the late Middle Ages, when insanity was still considered part of everyday life and fools and lunatics walked the streets freely, to the time when such people began to be considered a threat, asylums were first built, and walls were erected between the "insane" and the rest of humanity.

Now in its 30th printing, this classic presents historical, archaeological, and anthropological evidence to support the theory that ancient Egypt was a black civilization.

Western culture, which influenced the whole world, came from Europe. But its roots are not there. They are in Athens and Jerusalem. European culture takes its bearing from references that are not in Europe: Europe is eccentric. What makes the West unique? What is the driving force behind its culture? Remi Brague takes up these questions in *Eccentric Culture*. This is not another dictionary of European culture, nor a measure of the contributions of a particular individual, religion, or national tradition. The author's interest is especially, with regard to the transmission of that culture, to articulate the dynamic tension that has propelled Europe and more generally the West toward civilization. It is this mainspring of European culture, this founding principle, that Brague calls Roman. Yet the author's intent is not to write a history of Europe, and less yet to defend the historical reality of the Roman Empire. Brague rather isolates and generalizes one aspect of that history or, one might say, cultural myth, of ancient Rome. The Roman attitude senses its own incompleteness and recognizes the call to borrow from what went before it. Historically, it has led the West to borrow from the great traditions of Jerusalem and Athens: primarily the

Read Book Culture And Civilization Volume 1 2009

Jewish and Christian tradition, on the one hand, and the classical Greek tradition on the other. Nowhere does the author find this Roman character so strongly present as in the Christian and particularly Catholic attitude toward the incarnation. At once an appreciation of the richness and diversity of the sources and their fruit, *Eccentric Culture* points as well to the fragility of their nourishing principle. As such, Brague finds in it not only a means of understanding the past, but of projecting a future in (re)proposing to the West, and to Europe in particular, a model relationship of what is proper to it. An international bestseller (translated from the original French edition of *Europe, La Voie Romaine*), this work has been or is presently being translated into thirteen languages.

Gabriel R. Ricci establishes context and provides an overview of the entire work. Topics include the history of globalization, climate change policy, ecological consequences of development, concepts of civilization, human rights, Eastern thought and economics, global citizenship, and travel writing. Within this collection, Carl J. Strikwerda argues that the first era of globalization in modern times was marked by global migrations patterns. Pablo Iannone's history of the Andean oil rush and its ecological consequences looks at the processes of development. Brett Bowden argues that civilization entails both progress and war. J. Baird Callicott provides a philosophical analysis of a moral theory that accommodates spatial and temporal scales of climate change, Sanjay Paul analyzes the United Nations Global Compact, and Ed Chung discusses the role of economic theory in business schools. Colin Butler reflects on E. F. Schumacher's "Buddhist Economics," while Taso Lagos relates parallel polis to the idea of global citizenship. Tony Burns examines the ways in which Aristotle, Hegel, and Kant have been interpreted. Finally, Adam Stauffer explores Charles Warren Stoddard's work *South-Sea Idyls*. This volume of *Culture and Civilization*, the first under Ricci's editorship, follows the tradition of the previous four volumes—developing critical ideas intended to produce a positive intellectual climate, one that is prepared to confront

challenges and alert us to the opportunities, for people in all fields and of all faiths, of the twenty-first century.

Peter Kreeft presents a series of brilliant essays about many of the problems that undermine our Western civilization, along with ways to address them. "These essays are not new proposals or solutions to today's problems," he says. "They are old. They have been tried, and have worked. They have made people happy and good. That is what makes them so radical and so unusual today." In his witty, readable style, Kreeft implores us to gather wisdom and preserve it, as the monks did in the Middle Ages. He offers relevant philosophical precepts, divided into various categories, that can be collected and remembered in order to guide us and future generations in the days ahead. Kreeft emphasizes that the most necessary thing to save our civilization is to have children. If we don't have children, our civilization will cease to exist. The "unmentionable elephant in the room", he tells us, is sex, properly understood. Religious liberty is being attacked in the name of "sexual liberty", in other words, abortion. Kreeft encourages us to fight back—with joy and confidence—with the one weapon that will win the future: children.

The Story of Civilization

Civilization and Its Discontents

Civilization and Its Discontents is considered Freud's most brilliant work. In it he states his views on the broad question of man's place in the world. It has been praised, dissected, lambasted, interpreted, and reinterpreted. Originally published in 1930, it seeks to answer several questions fundamental to human society and its organization—What influences led to the creation of civilization? Why and how did it come to be? What determines civilization's trajectory? This process, argues Freud, is an inherent quality of civilization that instills perpetual feelings of discontent in its citizens. Freud's theme is that what works for civilization doesn't necessarily work for man. Man, by nature aggressive and egotistical, seeks self-satisfaction.

Intellectual activity in the twentieth century took place largely under the banner of science and society. As the new millennium develops, it is becoming evident that science and society are not words that represent an unmitigated good, nor for that matter, do they exhaust what is new in the human condition. Past writing on the theme of culture has emphasized the growth and expansion of human capabilities. Recent use of the term "civilization" has placed great emphasis on the fall from grace of human beings. The use of both terms is rapidly changing. Culture and Civilization develops critical ideas intended to produce a positive intellectual climate, one that is prepared to confront threats, and alert us to the opportunities of the twenty-first century. It recognizes that the twenty-first century presents people in all fields and of all faiths with shared challenges. Culture and Civilization embraces the work of novelists, journalists, cultural figures, technologists, physical sciences, historians, and policy personnel who range beyond social science areas. What they have in common is a view that civilization is under assault and that it represents a cause worth advancing and defending. This publication does not embrace idiosyncratic visions of the clash of world civilizations or the end of Western civilization. It does attempt to bring together immediate issues of the century that are substantially new and challenging. We see that the essential polarity between democracy and autocracy has now taken on larger, deeper dimensions in a different political, economic, and ecological terrain: the central issue of our day is now civilization versus

barbarism. The character of democratic culture is central to the global equation and the systemic challenge. This publication is a sober response to such a challenge.

This comprehensive survey of Etruscan civilization, from its origin in the Villanovan Iron Age in the ninth century B.C. to its absorption by Rome in the first century B.C., combines well-known aspects of the Etruscan world with new discoveries and fresh insights into the role of women in Etruscan society. In addition, the Etruscans are contrasted to the Greeks, whom they often emulated, and to the Romans, who at once admired and disdained them. The result is a compelling and complete picture of a people and a culture. This in-depth examination of Etruria examines how differing access to mineral wealth, trade routes, and agricultural land led to distinct regional variations. Heavily illustrated with ancient Etruscan art and cultural objects, the text is organized both chronologically and thematically, interweaving archaeological evidence, analysis of social structure, descriptions of trade and burial customs, and an examination of pottery and works of art.

*driving force behind our cultural and economic progress over the past 10,000 years. —Bill Gates, Gates Notes, Best Books of the Year Energy is the only universal currency; it is necessary for getting anything done. The conversion of energy on Earth ranges from terra-forming forces of plate tectonics to cumulative erosive effects of raindrops. Life on Earth depends on the photosynthetic conversion of solar energy into plant biomass. Humans have come to rely on many more energy flows—ranging from fossil fuels to photovoltaic generation of electricity—for their civilized existence. In this monumental history, Vaclav Smil provides a comprehensive account of how energy has shaped society, from pre-agricultural foraging societies through today's fossil fuel-driven civilization. Humans are the only species that can systematically harness energies outside their bodies, using the power of their intellect and an enormous variety of artifacts—from the simplest tools to internal combustion engines and nuclear reactors. The epochal transition to fossil fuels affected everything: agriculture, industry, transportation, weapons, communication, economics, urbanization, quality of life, politics, and the environment. Smil describes humanity's energy eras in panoramic and interdisciplinary fashion, offering readers a magisterial overview. This book is an extensively updated and expanded version of Smil's *Energy in World History* (1994). Smil has incorporated an enormous amount of new material, reflecting the dramatic developments in energy studies over the last two decades and his own research over that time.*

An anthology of the culture of ancient Israel, including its literature, legal documents, and visual arts "Readers seeking primary texts, documents, images, and artifacts constituting Jewish culture and civilization will not be disappointed. More important, they might even be inspired. . . . This set will serve to improve teaching and research in Jewish studies at institutions of higher learning and, at the same time, promote, maintain, and improve understanding of the Jewish population and Judaism in general." --Booklist, Starred Review

Volume 1 of The Posen Library covers the earliest period of Jewish civilization, from the second millennium BCE through 332 BCE.

Organized by genre, this book presents a collection of some of the earliest products of Jewish culture, including extensive selections from the Hebrew Bible; extrabiblical inscriptions and documents by and about Israelites and Jews, found by archaeologists in the lands of Israel, Egypt, and Mesopotamia; and images representing the visual culture of ancient Israel. Combining genres that have never been presented together in a single publication, Volume 1 illustrates ancient Israel's cultural innovations and commonalities with neighboring societies.

This two-volume compilation of primary sources in world civilization is based around eight major themes to provide direction and cohesion to the text. Designed to involve students with important historical questions and controversies, the text promotes thoughtful comparisons between world societies that are linked to common problems, events or themes within the same time period and across chronological divisions. Broad in scope, the text incorporates a wide variety of political, social,

economic, religious, intellectual and scientific issues, and is designed to help students consider historical questions and concerns.

The eighth volume in a landmark series, this anthology of Jewish culture and civilization encompasses the period between the world wars. An anthology of Jewish culture between the world wars, the editors' selections convey the variety, breadth, and depth of Jewish creativity in those tempestuous decades. Despite--or perhaps because of--external threats, Jews fought vigorously over religion, politics, migration, and their own relation to the state and one another. The texts, translated from many languages, show a wide range of politics, culture, literature, and art. This collection examines what was simultaneously a tense and innovative period in modern Jewish history.

A landmark project to collect, translate, and transmit primary material from a momentous period in Jewish culture and civilization, this volume covers what Elisheva Carlebach describes as a period "in which every aspect of Jewish life underwent the most profound changes to have occurred in antiquity." Organized by genre, this extensive yet accessible volume surveys Jewish cultural production and intellectual innovation during these dramatic years, particularly in

literature, the visual and performing arts, and intellectual culture. The wide-ranging collection includes a diverse selection of sources created by Jews around the world, translated from a dozen languages. Representing a tumultuous time of changing borders, demographic shifts, and significant Jewish migration, this anthology explores the range of approaches of Jews, from welcoming to resistant, to the intertwining ideals of enlightenment and emancipation, "the very foundation of the Jewish experience in this period." This world history text provides a comprehensive overview of modern history (1600s-2000) from a Christian perspective. Each chapter includes a timeline, listing of key terms, recommended projects, and comprehension questions. It is beautifully illustrated and contains numerous high-quality, two-color maps. Grade 10.

How a quest to crack the mystery of the Megalithic Yard led to the discovery of compelling evidence pointing to the existence of a highly advanced culture predating the earliest known civilizations. There must have been a "civilization one." Knight and Butler reveal the secrets of an extraordinary, integrated measuring system which might have been lost to the world forever. It was a system, far more advanced than anything used today, which forms the basis of both the Imperial and Metric measure systems. These ancient scientists understood the dimensions, motions and relationships of the Earth, Moon and Sun—they measured the solar system and even understood the speed of light was integrated into the movements of the planet. Their conclusions fly in the face of everything that we thought we knew about the origins of the modern world—the evidence is incontrovertible.

From interdisciplinary and continental perspectives, this volume explores elements of African culture and ideas, indigenous and modern, and how they have evolved through the ages. A groundbreaking look at Western and Eastern social development from the end of the ice age to today In the past thirty years, there have been fierce debates over how civilizations develop and why the West became so powerful. The Measure of Civilization presents a brand-new way of investigating these questions and provides new tools for assessing the long-term growth of societies. Using a groundbreaking numerical index of social development that compares societies in different times and places, award-winning author Ian Morris sets forth a sweeping examination of Eastern and Western development across

15,000 years since the end of the last ice age. He offers surprising conclusions about when and why the West came to dominate the world and fresh perspectives for thinking about the twenty-first century. Adapting the United Nations' approach for measuring human development, Morris's index breaks social development into four traits—energy capture per capita, organization, information technology, and war-making capacity—and he uses archaeological, historical, and current government data to quantify patterns. Morris reveals that for 90 percent of the time since the last ice age, the world's most advanced region has been at the western end of Eurasia, but contrary to what many historians once believed, there were roughly 1,200 years—from about 550 to 1750 CE—when the East Asian region was more advanced. Only in the late eighteenth century CE, when northwest Europeans tapped into the energy trapped in fossil fuels, did the West leap ahead. Resolving some of the biggest debates in global history, *The Measure of Civilization* puts forth innovative tools for determining past, present, and future economic and social trends.

"Behind every traditional type of cheese there is a fascinating story. By examining the role of the cheesemaker throughout world history and by understanding a few basic principles of cheese science and technology, we can see how different cheeses have been shaped by and tailored to their surrounding environment, as well as defined by their social and cultural context. *Cheese and Culture* endeavors to advance our appreciation of cheese origins by viewing human history through the eyes of a cheese scientist. There is also a larger story to

told, a grand narrative that binds all cheeses together into a single history that started with the discovery of cheese making and that is still unfolding to this day. This book reconstructs that 9000-year story based on the often fragmentary information that we have available. Cheese and Culture embarks on a journey that begins in the Neolithic Age and winds its way through the ensuing centuries to the present. This tour through cheese history intersects with some of the pivotal periods in human prehistory and ancient, classical, medieval, renaissance, and modern history that have shaped western civilization, for these periods also shaped the lives of cheesemakers and the diverse cheeses that they developed. The book offers a useful lens through which to view our twenty-first century attitudes toward cheese that we have inherited from our past, and our attitudes about the food system more broadly. This refreshingly original book will appeal to anyone who loves history, food, and especially good cheese"--Provided by publisher.

Debates on the meaning of religious belief in an advanced technological age have established the emergence of religion as a fact of daily life. The nineteenth-century imagery of "warfare" between science and religion is long dismissed. Emphasizing this fact of the continuing relevance and importance of religion as a driving force in contemporary life is the stunning emergence on the world scene of militant Muslim beliefs in a period of relatively inactive religious belief elsewhere. In this volume of Culture and Civilization, religion is examined in the context of post-modern societies. The collection of essays is divided by themes: religions, civilizations, cultures, and the history of ideas. The contributors William Donohue, Simon Kuznets, A. L. Kroeber, Greg Mills, Yoani SÃ¡nchez, Murray Weidenbaum, Andreas Herberg-Rothe, Daniel Bell, John W. Gardner, John Charles, and Liu Xiaobo's discuss a variety of topics, with titles including "The Catholic Church and Sexual Abuse," "Why is Africa Poor?," "Freedom and Exchange in Communist Cuba," and the "Economic Structure and the Life of the Jews." This volume concludes with a grouping of review essays on famous figures ranging from Crane Brinton and Herbert Spencer to Max Gluckman and Hannah Arendt. The volume as a whole projects a sense of the future and avoids hysteria about the past. The contributors have a sharp edge and speak in a critical voice to the dilemmas of the present world order. In Civilizations, Felipe Fernández-Armesto once again proves himself a brilliantly original historian, capable of large-minded and comprehensive works; here he redefines the subject that has fascinated historians from Thucydides to Gibbon to Spengler to Fernand Braudel: the nature of civilization. To Fernández-Armesto, a civilization is "civilized in direct proportion to its distance, its difference from the unmodified natural environment"...by its taming and warping of climate, geography, and ecology. The same impersonal forces that put an ocean between Africa and India, a river delta in Mesopotamia, or a 2,000-mile-long mountain range in South America have created the mold from which humanity has fashioned its own wildly differing cultures. In a grand tradition that is certain to evoke comparisons to the great historical taxonomies, each chapter of Civilizations connects the world of the ecologist and geographer to a panorama of cultural history. In Civilizations, the medieval poem Sir Gawain and the Green Knight is not merely a Christian allegory, but a testament to the thousand-year-long deforestation of the trees that once covered 90 percent of the European mainland. The Indian Ocean has served as the world's greatest trading highway for millennia not merely because of cultural imperatives, but because the regular monsoon winds blow one way in the summer and the other in the winter. In the words of the author, "Unlike previous attempts to write the comparative history of civilizations, it is arranged environment by environment, rather than period by period, or society by society." Thus, seventeen distinct habitats serve as jumping-off points for a series of brilliant set-piece comparisons; thus, tundra civilizations from Ice Age Europe are linked with the Inuit of the Pacific Northwest; and the Mississippi mound-builders and the deforesters of eleventh-century Europe are

both understood as civilizations built on woodlands. Here, of course, are the familiar riverine civilizations of Mesopotamia and China, of the Indus and the Nile; but also highland civilizations from the Inca to New Guinea; island cultures from Minoan Crete to Polynesia to Renaissance Venice; maritime civilizations of the Indian Ocean and South China Sea...even the Bushmen of Southern Africa are seen through a lens provided by the desert civilizations of Chaco Canyon. More, here are fascinating stories, brilliantly told -- of the voyages of Chinese admiral Chen Ho and Portuguese commodore Vasco da Gama, of the Great Khan and the Great Zimbabwe. Here are Hesiod's tract on maritime trade in the early Aegean and the most up-to-date genetics of seed crops. Erudite, wide-ranging, a work of dazzling scholarship written with extraordinary flair, Civilizations is a remarkable achievement...a tour de force by a brilliant scholar.

The classic study of post-Cold War international relations, more relevant than ever in the post-9/11 world, with a new

foreword by Zbigniew Brzezinski. Since its initial publication, *The Clash of Civilizations and the Remaking of World Order* has become a classic work of international relations and one of the most influential books ever written about foreign affairs. An insightful and powerful analysis of the forces driving global politics, it is as indispensable to our understanding of American foreign policy today as the day it was published. As former National Security Adviser Zbigniew Brzezinski says in his new foreword to the book, it “has earned a place on the shelf of only about a dozen or so truly enduring works that provide the quintessential insights necessary for a broad understanding of world affairs in our time.” Samuel Huntington explains how clashes between civilizations are the greatest threat to world peace but also how an international order based on civilizations is the best safeguard against war. Events since the publication of the book have proved the wisdom of that analysis. The 9/11 attacks and wars in Iraq and Afghanistan have demonstrated the threat of civilizations but have also shown how vital international cross-civilization cooperation is to restoring peace. As ideological distinctions among nations have been replaced by cultural differences, world politics has been reconfigured. Across the globe, new conflicts—and new cooperation—have replaced the old order of the Cold War era. *The Clash of Civilizations and the Remaking of World Order* explains how the population explosion in Muslim countries and the economic rise of East Asia are changing global politics. These developments challenge Western

dominance, promote opposition to supposedly “universal” Western ideals, and intensify intercivilization conflict over such issues as nuclear proliferation, immigration, human rights, and democracy. The Muslim population surge has led to many small wars throughout Eurasia, and the rise of China could lead to a global war of civilizations.

Huntington offers a strategy for the West to preserve its unique culture and emphasizes the need for people everywhere to learn to coexist in a complex, multipolar, multicivilizational world.

When the World Was Black: The Untold History of the World’s First Civilizations (Volume Two of The Science of Self series) has been published in TWO parts. Why two? Because there are far too many stories that remain untold. We had over 200,000 years of Black history to tell – from the southern tip of Chile to the northernmost isles of Europe – and you can’t do that justice in a 300-page book. So there are two parts, each consisting of 360 pages of groundbreaking history, digging deep into the story of all the world’s original people. Part One covers the Black origins of all the world’s oldest cultures and societies, spanning more than 200,000 years of human history. Part Two tells the stories of the Black men and women who introduced urban civilization to the world over the last 20,000 years, up to the time of European contact. Each part has over 100 helpful maps, graphs, and photos, an 8-page full-color insert in the center, and over 300 footnotes and references for further research. “In this book, you’ll learn about the history of Black people. I don’t

mean the history you learned in school, which most likely began with slavery and ended with the Civil Rights Movement. I'm talking about Black history BEFORE that. Long before that. In this book, we'll cover over 200,000 years of Black history. For many of us, that sounds strange. We can't even imagine what the Black past was like before the slave trade, much less imagine that such a history goes back 200,000 years or more." "Part Two covers history from 20,000 years ago to the point of European contact. This is the time that prehistoric cultures grew into ancient urban civilizations, a transition known to historians as the "Neolithic Revolution."

An exploration of global Jewish responses to the years 1939 to 1973, a time of unprecedented destruction, dislocation, agency, and creativity. The Posen Library of Jewish Culture and Civilization Volume 9 covers the years 1939 to 1973, a period that editors Kassow and Roskies call "one of the most tragic and dramatic in Jewish history." Organized geographically and then by genre, this book details Jewish cultural and intellectual resources throughout this era, particularly in political thought, literature, the visual and performing arts, and religion. This volume explores worldwide Jewish perceptions of momentous events that transpired in the mid-twentieth century and how Jews redefined themselves across regions throughout an era rife with tragedy, displacement, and dispersion.
