This book makes accessibleÑfor the first time in EnglishÑdeclassified archival documents from the former Soviet Union, rabbinic sources, and previously untranslated memoirs, illuminating everyday Jewish life as the site of interaction and negotiation among and between neighbors, society, and the Russian state, from the beginning of the nineteenth century to World War I. Focusing on religion, family, health, sexuality, work, and politics, these documents provide an intimate portrait of the rich diversity of Jewish life. By personalizing collective experience through individual life storiesÑreflecting not only the typical but also the extraordinaryÑthe sources reveal the tensions and ruptures in a vanished society.

An introductory survey of Russian Jewish history from the Polish partitions (1772Ð1795) to World War I combines with prefatory remarks, textual annotations, and a bibliography of suggested readings to provide a new perspective on the history of the Jews of Russia.

Klaus Vogel on Double Taxation Conventions is regarded as the international gold standard on the law of tax treaties. This article-by-article commentary has been completely revised and updated to give you a full and current account of double tax conventions (DTCs). DTCs form the backbone of international taxation, but they raise many interpretational questions. This market leading work will provide you with the answers. Based on the OECD/G20 Multilateral Instrument, the OECD MC and Commentary published in 2017 and the most recent amendments to the UN MC, the book also includes relevant case law and scholarly literature upto and including 2020. Previous editions of the Vogel have been routinely relied on by courts around the world including Australia, Canada, Germany, India, South Africa, the Netherlands and United Kingdom. What ' s new in this edition? There have been many important developments in this area since the last edition in 2015. The authors discuss these developments and the effect they will have upon practitioners working in this area. They also provide a wealth of new and revised case law, along with the DTCs of emerging countries. You ' ll find: Reports about major features in the DTC practice of many leading jurisdictions, such as: the DTC practice of Austria, Canada, France, Germany, India, the Netherlands, Switzerland, the UK and the US Sections on divergent country practice covering their national models and networks of bilateral DTCs Thorough analysis of the OECD and UN model, as well as the implementation of these models in practice Amendments of bilateral DTCs, textual or in substance, on the basis of the 2017 Anti-BEPS Multilateral Instrument Coverage of a full range of the latest tax treaties around the world, including important treaties between OECD and BRICS countries This new Fifth Edition of Klaus Vogel on Double Taxation Conventions continues to reflect the unchallenged role of the OECD. The OECD MC, accompanied by the official Commentary, guidelines, reports and other recommendations, has sustained its position as the most important legal instrument in the area of DTCs. On occasion, the UN MC and Commentary diverge from the OECD texts. When this happens, the authors deal with the specifics of the UN MC in separate annotations and analyses, explaining and making sure you understand the differences. These 34 cities and towns represented only 23 states. • Among the 75 largest cities,

Seattle, Boston, and San Francisco all have more than 72 percent of their residents in the 18-to-64 age group. • During the years 2010 through 2014, 13.1 percent of the residents of the United States were born in foreign countries. In 43 cities—mostly medium-sized cities and CDPs—more than half of the people are foreign-born. Many of these cities are in Florida. • In the five-year period from 2010 through 2014, 63.9 percent of

Americans age 16 and older were in the civilian labor force, and 9.2 percent of the labor force participants were unemployed. • Nationally, Health Care and Social Assistance is the industrial sector with the most employees—16.6 percent of the total—followed by Retail Trade with 13.2 percent. Places, Towns and Townships makes a valuable addition to the County and City Extra Series.

Exploring multimodality in English language teaching textbooks, this book focusses on how language and image are co-deployed within these resources in order to create and convey interpersonal meaning. Presenting cutting-edge research in appraisal studies and multimodal discourse analysis, Yumin Chen uses systemic functional linguistics and social semiotics to investigate how different voices are introduced and aligned inter-modally in textbooks, extending the appraisal systems of engagement and graduation across language and image. The book also demonstrates how linguistic and visual semiotic resources co-instantiate attitude,

paying special attention to the attitudinal dimension of curriculum goals for school students of different ages. Furthermore, it examines how different kinds of coding orientation are deployed in various educational contexts and different constituent genres. Demonstrating how the linguistic and semiotic theories can be

adapted to analyze multimodal texts across language and image, Interpersonal Meaning in Multimodal English Textbooks offers new perspectives on how to employ multimodal resources to enhance the teaching and learning of English as a foreign language.

Since its inception, eye-tracking technology has evolved into a critical device in psychological and sociological settings. By tracking eye movement, one can conduct lie detection, learn about neuropsychology, and measure reading response. Recently, these technologies have been implemented in Educational and School Psychology as a way to assess how students interact with content. Eye-Tracking Technology Applications in Educational Research enriches the current pool of educational research with cutting-edge applications of eye tracking in education. Seeking to advance this emergent, interdisciplinary field, this publication collects a diverse group of researchers exploring all aspects of this technology as an essential reference for educators, researchers, administrators, and advanced graduate students.

The Deaf and the Hard-of-hearing in the Occupational World

Until about two decades ago, the study of writing systems and their relationship to literacy acquisition was sparse and generally modeled after studies of English language learners. This situation is now changing. As the worldwide demand for literacy continues to grow, researchers from different countries with different language backgrounds have begun examining the connection between their writing systems and literacy acquisition. This text, which derives from a NATO sponsored conference on orthography and literacy, brings together the research of seventy scholars from across the world--the largest assemblage of such experts to date. Their findings are grouped into three parts, as follows: Part I, Literacy Acquisition in Different Writing Systems, describes the relationship between orthography and literacy in twenty-five orthographic systems. This section serves as a handy reference source for understanding the orthographies of languages as diverse as Arabic, Chinese, English, Icelandic, Kannada, and Kishwahili. Part II, Literacy Acquisition From a Cross-Linguistic Perspective, makes direct comparisons of literacy acquisition in English and other orthographic systems. The overall conclusion that emerges from these eight chapters is that the depth of an orthographic system does influence literacy acquisition primarily by slowing down the acquisition of reading skills. Even so, studies show that dyslexic readers can be found across all orthographic systems whether shallow or deep, which shows that dyslexia also has internal cognitive and biological components. Part III, Literacy Acquisition: Instructional Perspectives, explores literacy acquisition from developmental and instructional perspectives and ends with a look into the future of literacy research. This Handbook is appropriate for scholars, researchers, and graduate students in such diverse fields as cognitive psychology, psycholinguistics, literacy education, English as a second language, and communication disorders.
