This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world ’ s largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

At the beginning of the 1990s, Korean firms embarked on an impressive wave of direct investment abroad. This dramatic multinationalization was considered as yet another sign of Korea’s remarkable economic performance, especially as a high proportion of the foreign ventures were located in advanced countries. But this unbalanced quest for globalization actually tested the ‘Korean model’ to its limits; after the 1997 crisis a new policy prepared the way for a surge of inward investment. Using empirical tests and case-studies, this collection shows that Korean groups have invested in developed countries to jump over trade barriers, but also to source advanced technology and marketing capabilities. Moreover, their ambitious strategies have been stimulated by oligopolistic rivalry among the chaebols. From a policy perspective, the book provides an original discussion of national ownership by questioning the substitutability between inward and outward foreign investment and its relationship with the evolution of the national innovation system. By shedding light on the pattern of Korea’s internationalization, these essays make a valuable contribution to the theory of international production and provide important insights for the current policy debates on globalization and innovation-led growth.

These essays identify the evolutionary processes and patterns of learning, capability-building and innovation in catch-up countries. They suggest that such economies have different patterns of learning from those of advanced countries. Kim uses the example of Korea to examine various industries.

No automobile is more recognizable than the Volkswagen Beetle. Introduced as an affordable motor vehicle for postwar Germany, the little Beetle grew to iconic status in both the automotive world and the world of pop culture. This year-by-year, full-color tribute to the "People's Car" begins with the first models in 1945 and goes on to cover the Beetle's 33-year production run in Germany, it's continued manufacture in Mexico starting in 1978, and the introduction in Spring 1998 of the New Beetle -- a car that reasserted the model's popularity, posted remarkable sales and, like its forebear, transcended the automotive world to become a pop culture sensation.

Naturally aspirated Mopar Wedge big-blocks are quite capable of producing between 600 to 900 horsepower. This book covers how to build Mopar's 383-, 400-, 413-ci, 440-ci engines to these power levels. Discussed is how to select a stock or aftermarket block for the desired performance level. The reciprocating assembly is examined in detail, so you select the right design and material for durability and performance requirements. Cylinder heads and valve train configurations are crucial for generating maximum horsepower and torque and this volume provides special treatment in this area. Camshafts and lifters are compared and contrasted using hydraulic flat tappet, hydraulic roller and solid flat tappet cams. Also, detailed engine builds at 600, 700, 800, and 900 horsepower levels provide insight and reveal what can be done with real-world component packages.

A resolution to the vexed problem whether a troubadour's love is erotic or spiritual is offered by Paolo Cherchi through a new reading of Andreas Capellanus' De Amore (written around 1186-1196). He suggests that Andreas, using a rhetorical strategy that creates ambiguity, condemns courtly love because its claim that passion generates virtue is untenable and deceitful. Although Andreas grasped the core of the courtly love 'system,' namely, the relation between passion and ethics, he failed to consider the notion of mezura, that courtly virtue through which troubadours transformed nature into culture, and erotic passion into social discourse. Cherchi offers an innovative interpretation and a close reading of selected poems. He traces the history of Provençal lyric poetry, highlighting some of the significant personalities and movements.
