

Data Sheet Aruba Central

International Financial Statistics Yearbook, 2017

Updated and revised with many new detailed maps and photographs, this sixth edition enables geographers to explore the changes and major issues facing this dynamic region today. The historical material has been streamlined in order to focus on contemporary issues. Key environmental issues are highlighted in new boxes throughout the chapters. The Systematic surveys have been restructured. New profiles of Latin American countries and major issues are also covered. This approach will help geographers visit the dynamic people and places of Latin

The government's plans to reform the tax system and administration are well founded. The Central Bank of Aruba is to be commended for its prudent management of monetary policy, as demonstrated by the continued credibility and strength of the peg to the U.S. dollar, buttressed

by a robust foreign reserve position. There has been significant progress in expanding and strengthening the supervisory and regulatory framework of financial activities. Renewed initiatives on structural reforms will improve efficiency in the use of resources and attract strategic investment.

The International Financial Statistics Yearbook, usually published in September, contains available annual data covering 12 years for countries appearing in the monthly issues of IFS. The IFS service is the standard source of

international financial statistics. Additional time series in country tables and some additional tables of area and world aggregates are included in the Yearbook.

the Executive Board Discussion

This 2017 Article IV Consultation highlights Aruba's recession, which began around mid-2015. Real GDP contracted by 0.5 and 0.2 percent in 2015 and 2016, respectively. Weakness in activity was broad based in 2016. Domestic demand contracted by 3.0 percent. Exports grew only 0.3 percent owing to weak tourism and shrinking nontourism exports. Imports contracted by 3.5 percent, reflecting weak demand on the back of fiscal consolidation and weak tourism growth.

Monetary policy was unchanged during 2015–16. The banking system remains resilient. Banks maintain elevated capital buffers, have relatively low nonperforming loans, and are profitable.

Aruba managed to contain the pandemic in the first months of the outbreak but experienced a resurgence of new infections in the summer. The economic impact of COVID-19 is particularly severe given Aruba's high dependency on tourism. While the authorities' swift response has helped contain

the human and economic damage, it could not avoid a severe GDP contraction.

International Financial Statistics May 2002

Topographic mapping plays a basic and important role within the extensive field of cartography. In recent years, this type of mapping has become

somewhat neglected and available literature is normally restricted to details concerning the programmes of individual countries often presented in the form of monographs. Topographic maps are essential tools for use in development projects, resource exploitation, the planning of construction, infrastructure and recreation. They also give detailed illustration of the relative degrees of development of areas within a landscape and are thus unique in demonstrating the cultural status of a country. This book is the second of three volumes and gives details and

Download File PDF Data Sheet Aruba Central

examples of topographic maps from Central and South America and Africa. The information supplied for each country consists of a text, including a brief history of the development of topographic mapping, geodetic data, map scales and series, as well as extracts of maps and index sheets illustrating the present status of map coverage within that country. There is currently no other work employing the approach adopted in assembling this inventory. This work is a comprehensive and important reference and source book for information in the field of

topographic mapping.

Presents for the first time detailed data on the role played by multinationals in the industrial sectors of the OECD economies.

This chapter presents a report on International Financial Statistics (IFS). The country tables normally include data on a country's exchange rates, IMF position, international liquidity,

Download File PDF Data Sheet Aruba Central

monetary statistics, interest rates, prices, production, labor, international transactions, government accounts, national accounts, and population. Selected series, including data on Fund accounts, international reserves, and international trade, are drawn from the country tables and published in world tables as well. Exchange rates in IFS are classified into three broad categories, reflecting the role of the authorities in determining the rates and/or the multiplicity of the exchange rates in a country. In IFS, exchange rates are expressed in time series of national currency units per SDR (the unit of account for the IMF) and national currency units per US dollar, or vice versa. The country tables, euro area tables, and world tables provide measures of effective exchange rates, compiled by the IMF's Research Department, Strategy, Policy, and Review

International Financial Statistics Yearbook, 2016

This 2002 Article IV Consultation for the Kingdom of the Netherlands—Aruba highlights that after growing at more than 4 percent per year in 1996–2000, the Aruba economy experienced two years of retrenchment, with GDP falling an estimated 1.2

Download File PDF Data Sheet Aruba Central

percent in 2001 and 3.8 percent in 2002. This downturn reflected a lull in investment activity, but especially weak tourism following the United States recession and the terrorist attacks of September 11, 2001. In 2003, sharply higher private and public investment and a modest revival in tourism should boost economic growth to more than 4 percent. This 2013 Article IV Consultation highlights that economic output in Aruba remains 12 percent below its pre-crisis level, with recovery slower than others in the Caribbean region. The non-oil current account (CA) balance, which mostly reflects developments in the tourism sector, has improved since mid-2000 reaching a balanced position in 2012. The overall CA

balance, however, after being in surplus for years, showed volatilities in recent years reflecting oil-sector developments. In 2012, it recorded a surplus of 5 percent of GDP. In 2013, real output is projected to grow by 11/4 percent. Robust tourism growth and some pickup in consumption from projected deflation will support the subdued near-term recovery.

Measuring Globalisation: The Role of Multinationals in

OECD Economies 1999

The IMF's principal statistical publication, International Financial Statistics (IFS) Online, is the standard source of international statistics on all aspects of international and domestic finance. For most countries, IFS Online reports data on balance of payments, international investment position, international liquidity, monetary and financial statistics, exchange rates, interest rates, prices, production, government accounts, national accounts, and population. Updated monthly.

This issue of International Financial Statistics (IFS), Country Notes presents, in two sections, brief information on the data published in IFS. The first section provides a description of the compilation techniques underlying selected area and world tables. The second identifies for each country the standard sources of the

statistics and provides some explanatory material on each country's data, including any breaks in the series. Country Notes is designed to be a companion volume to each version of IFS: the monthly print edition, the yearbook, the CD-ROM, and the Internet. It will normally appear as an annual volume and will be shipped with the print edition of the International Financial Statistics Yearbook during August each year. The aggregate Industrial Production Index for the industrial countries as a group is calculated by the Statistics Department from industrial and manufacturing production indices that are published in the country pages. Private commercial banks report data based on the Gregorian calendar, while state-owned commercial banks report data based on the Solar calendar. This results in differences in the interbank positions for other depository corporations.

***This 2015 Article IV Consultation highlights that
Aruba has been recovering from a severe double-
dip recession. The economy faced two major
shocks over the past five years—the global
financial crisis and shutdown of the Valero oil***

refinery in 2012. After a strong recovery in 2013 with growth reaching 4.75 percent, the pace of activity moderated in 2014. In 2015, growth is projected to rise to 2.25 percent. The tourism sector—the mainstay of the Aruban economy—is envisaged to grow, albeit at a slower rate.

Moreover, domestic demand is slated to recover notably amid subsiding policy uncertainty and as key public-private partnership projects move forward.

This 2018 yearbook issue of International Financial Statistics (IFS) is a standard source of

statistics on all aspects of international and domestic finance. The IMF publishes calculated effective exchange rates data only for countries that have given their approval. The country, euro area, and world tables provide measures of effective exchange rates, compiled by the IMF's Research Department, Statistics Department, and area departments. The real effective exchange rate index in line rec is derived from the nominal effective exchange rate index, adjusted for relative changes in consumer prices. Consumer price indices, often available

monthly, are used as a measure of domestic costs and prices for these countries.

Supplement International Monetary Fund
This 2016 yearbook issue of International Financial Statistics is a standard source of statistics on all aspects of international and domestic finance. The monthly printed issue of IFS reports current monthly, quarterly, and annual data, while the yearbook reports 12 observations of annual data. Most annual data on the CD-ROM and Internet begin in 1948; quarterly and monthly data generally begin in 1957; most balance-of-payments data begin in 1970. The notes to the

Download File PDF Data Sheet Aruba Central

country tables in the monthly issues provide information about exceptions in the choice of the consumer price index (generally line 64) and the period average exchange rate index. Quotas are reviewed at intervals of not more than five years. The reviews take account of changes in the relative economic positions of members and the growth of the world economy. The General Resources Account resources consist of the currencies of Fund member countries, SDRs, and gold.
