How is it that during a war, one can still find gardens? In the most brutal environments, on both the home front and the battlefield, they continue to flourish. Wartime gardens are dramatic examples of what Kenneth I. Helphand calls "defiant gardens" — gardens created in extreme social, political, economic, or cultural conditions. Illustrated with archival photos, this century, including extraordinary examples built behind the trenches in World War I, in the Warsaw and other ghettos during World War II, and in Japanese-American internment camps, as well as gardens created by soldiers at their bases and encampments during wars in the Persian Gulf, Vietnam, and Korea. Winner of the Environmental Design Research Association's award, these man-made constructs are far more than decorative diversions or simple sanctuaries from the stresses of daily life.

Spinning off from the universe of SUNSTONE comes a slice-of-life romantic story about a couple trying to regain the sexual energy from the beginning of their relationship by swinging with other couples. An emotional journey of two people fighting to stay in love.

The last decade has seen the rise of urban design which has taken a central position in the new agendas for urban regeneration and renaissance. Urban design has moved from marginality to mainstream. The principles espoused by urban designers over the past thirty years are now accepted as key to a better urban environment and as we move towards greater sustainability some of the accepted urban design norms: urban design is at a watershed. Urban Design Futures presents essays from an international cast of authors to review progress and explore emerging ideas: should urban design reflect the future rather than recreate the past? What are the new driving forces that will shape urban living and hence urban design in the future? A series of urban design paradigms for the twenty-first century.

In the sequel to The Man with the Golden Torc, Eddie Drood is forced to take on some nasty daemons from another dimension, who arrived in this world at the behest of the Drood family to help battle the Nazis during World War II and who have decided that they have no intention of leaving.

90 Readings for Hope and Healing

Learning how to revise may well be the most excruciating part of writing - frequently it is what makes or breaks new writers. Now, in this unique and highly useful book, Jay Woodruff gives some of America's finest contemporary writers an opportunity to talk with passion and professionalism about revision - about the hard work of their writing. Books on writing generally offer prescriptions and proscriptions about this "craft so hard to learn" instead of evidence. But in A Piece of Work Woodruff's incisive questions guide five writers - Tobias Wolff, Tess Gallagher, Robert Coles, Joyce Carol Oates, and Donald Hall - through specific examples that enable the reader to see how good writing becomes better. From the first draft through various revisions and finally to the printed version of a single piece of each author's work, Woodruff traces the full course of the revision process. While we might prefer to picture all authors as Coleridge, with the perfectly formed lines and stanzas of "Kubla Khan" emerging from a dream, the truth of the matter is that the development of a final text is often as much a hard-won discovery as it is an initial inspiration. A Piece of Work offers a road map to that discovery.

Visual Thinking brings the science of perception to the art of design. Designers increasingly need to present information in ways that aid their audience's thinking process. Fortunately, results from the relatively new science of human visual perception provide valuable guidance. In this book, Colin Ware takes what we now know about perception, cognition, and attention and transforms it into concrete advice that designers can directly apply. He demonstrates how designs can be considered as tools for cognition – extensions of the viewer's brain in much the same way that a hammer is an extension of the user's hand. The book includes hundreds of examples, many in the form of integrated text and full-color diagrams. Experienced professional designers and students alike will learn how to maximize the power of the information tools they design for the people who use them. Presents visual thinking as a complex process that can be supported in every stage using specific design techniques Provides practical, task-oriented information for designers and software developers charged with design responsibilities Includes hundreds of examples, many in the form of integrated text and full-color diagrams Steeped in the principles of "active vision, which views graphic designs as cognitive tools

This book makes a significant contribution to the history of placemaking, presenting grassroots to top-down practices and socially engaged, situated artistic practices and artsled spatial inquiry that go beyond instrumentalising the arts for development. The book brings together a range of scholars to critique and deconstruct the notion of creative placemaking, presenting diverse case studies from researcher, practitioner, funder and policymaker perspectives from across the globe. It opens with the creators of the 2010 White Paper that named and defined creative placemaking, Ann Markusen and Anne Gadwa Nicodemus, who offer a cortically reflexive narrative on the founding of the sector and its development. This book looks at vernacular creativity in place, a topic continued through the book with its focus on the practitioner and community-placed projects. It closes with a consideration of aesthetics, metrics and, from the editors, a consideration of the next ten years for the sector. If creative placemaking is to contribute to places-in-the-making and encourage citizenled agency, new conceptual frameworks and practical methodologies are required. This book joins theorists and practitioners in dialogue, advocating for transdisciplinary, resilient processes.

Music at the Limits brings together three decades of Edward W. Said's essays on music. Addressing the work of a wide variety of composers and performers, Said analyses music's social and political contexts, and provides rich and often surprising assessments. He reflects on the censorship of Wagner in Israel; the relationship between music and feminism; and the works of Beethoven, Bruckner, Rossini, Schumann, Stravinsky and others. Always eloquent and often surprising, Music at the Limits reinforces Said's reputation as one of the most influential writers of the twentieth century.

The perfect grounding for students intending to take their studies to a more advanced level.Features: Introductory page to each unit to bring out the relevance of the material to everyday life Simple questions at the end of each unit to consolidate learning Helpful revision summary Stephen Pople, one of today's most respected science authors, has created a totally new physics book to prepare students for examinations. Complete Physics covers all syllabuses due to a unique combination of Core Pages and Further Topics. Each chapter contains core material valid for all syllabuses. Further Topics at the end can be selected to provide the right mix of pages for the syllabus you are teaching. Key Points: · Totally new book constructed from an analysis of all GCSE Physics syllabuses including IGCSE, CXC, and O'Level · Sets the traditional principles of physics in a modern and global perspective and uses illustrations with a worldwide context · Extra topics to give a truly rounded curriculum · Double-page spread format · Ideal for those students intending to take physics to a more advanced level Activist Architecture is an edited volume bringing together some of the most creative minds working in the world of community design and socially engaged practice. It asserts that community design centers and other socially engaged practices expand the influence built environmental professions have on culture and society. These practices work under the premise that designers should expand their clientele, where they work, and the types of projects they engage. This does not mean that design centers exclude people who typically build or hire an architect, urban designer, landscape architect, or planner. Design centers include more people, more programs, and more geographies in the process. They are advocates for people who are typically left out of design and place-making decisions. Design centers widen the undertaking beyond some people to include all (or more) people. While looking back over the past 50+ years, Activist Architecture positions the philosophy and practice of community design centers for today and tomorrow. The editors of Activist Architecture put together both a "why-to" and "how-to" guide for establishing and operating a community design center.

Quickly master architectural programming concepts, skills, and techniques In the essential discipline of architectural programming, the ideas of philosophy, sociology, anthropology, psychology, and history find their focus in the realities of site conditions, budgets, and functionality. Author Edith Cherry vividly demonstrates in this inspiring tutorial that the programming process not only helps architects avoid the endless design revisions occurring in most projects, but that it is also the key to designing for optimal form and function. Programming for Design lets you rapidly acquire the knowledge and skills needed to successfully program a moderate-size space. Rather than simply describe basic principles and practices, this straightforward guide helps you master architectural programming by actually doing it. Professor Cherry identifies the central issues involved and describes the skills needed to work with clients to identify problems to be solved by a design effort. Emphasizing designing for people, she offers proven strategies and techniques for goal setting, information gathering and analysis, concept development, program synthesis, and communicating with clients. The book is also devoted to practical applications. The author walks you step-by-step through a project of your own choosing, providing numerous examples and four case studies within each step that vividly illustrate how to effectively gather, process, and communicate information. Programming for Design features more than 200 supporting illustrations, diagrams, and sidebars appearing throughout the text, reproducing pithy sayings by such far-flung figures as Plato and Yogi Berra, Einstein and Lao Tzu, that help relate the programming process to other disciplines.

This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not. They discuss what was learned over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research. Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI Research

What is mental health in infancy and early childhood? Why is it important? How does the infant-parent relationship influence development, and how do these early experiences shape our lives? How can clinical assessment and intervention focus on these early relationships to improve developmental outcomes for infants, young children, and their families? This thoroughly updated and expanded second edition provides an evidence-based and practical approach to assessment of young children and their families across diverse settings. The impact of attachment issues, prematurity, trauma, parental mental illness, substance abuse, and other adverse circumstances is clearly explained. Additionally, the quality of parenting and the importance of early relationships are addressed. Written for a wide range of professionals - including maternal and child health nurses, general practitioners, psychiatrists, child protection workers, early childhood educators, and community and mental health workers - this edition has two new chapters on intervention and professional issues, such as training, ethics, and advocacy. The growing understanding of factors that influence infant psychological development, and influence the social and emotional well-being of young children and their families, make this book an essential reference for all health care practitioners and early childhood professionals.
