

Dell Studio 17 Service

Innovations in providing vital health care in homes and remote areas could ultimately change the way society views the health care markets and services in the future. Telehealth systems promise innovations that can extend a hospital's knowledge and resources, connecting with patients who may not be able to otherwise receive services. Telehealth Network for Hospital Services: New Methodologies carefully focuses on and describes different networks that link hospitals and their services to patients outside their territory. This reference work not only focuses on the technology that is integral to the function of a telehealth network, but also its users, and the collaboration that is necessary to be successful. Researchers, practitioners, and health professionals interested in understanding health markets and organizations, as well as the innovative technologies that help them function, will greatly benefit from this publication.

PC World

A Comprehensive Compilation of Decisions, Reports, Public Notices, and Other Documents of the Federal Communications Commission of the United States

Statement of Disbursements of the House

This book is the first comprehensive international overview of maternity services. Drawing on concepts of risk and social citizenship, it explores the relationship between welfare regimes and health policy by comparing and contrasting provision for childbearing women. Each substantive chapter focuses on a different country, presenting detailed contextual information on health care provision, maternity interventions and birth outcomes there. They discuss key issues such as birth rates and fertility patterns, the role of patient choice, attitudes to place of birth and maternity entitlements among others, and the countries covered represent diverse welfare regimes, including Ireland, Scotland,

Sweden, the Netherlands, Germany, Italy, Japan, the United States, Canada, Australia and New Zealand. An extended introduction and a conclusion draw the book together and place it in the context of the literature on comparative welfare regimes. It is an important reference for students and academics interested in comparative social policy, health services research, and maternity services and policies.
