*Lawrence Lessig, “the most important thinker on intellectual property in the Internet era”, masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers- that-be been able to exert such control over what we can and can’t do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.*

*Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.*

'Extraordinary imagination . . . As the book races towards a mindboggling climax it leads the reader to some remarkable ideas about the nature of life, the universe and everything. Simply stunning.' - Big Issue At Jodrell Bank a mysterious signal of extraterrestrial origin has been detected. Artificial intelligence expert Jack Fenwick thinks he and his associates at Hoxton tech startup Intelligencia find a way to step into the alien realm the signal encodes, they discover that it's already occupied – by ghostly entities that may come from our own past. Have these 'DMEn' (Digital Memetic Entities) been created by persons unknown for just such an eventuality? Are they our first line of defence for our minds? XX presents a compelling vision of humanity's unique place in the universe, and of what might happen in the wake of the biggest scientific discovery in human history. As compelling as it is visually striking, Rian Hughes' first novel incorporates NASA transcripts, newspaper and magazine articles, fictitious Wikipedia pages, and a forgotten novelette by 1960s counterculture guru Herschel Teague that mysteriously foreshadows events. Wrapping stories within stories, Rian Hughes' XX unleashes the full narrative potential of graphic design. Drawing on Dada, punk and the modernist movements of the twentieth century, it asks us who we think we are – and where our mind has already begun.
