Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

In this edited volume on advances in forensic geotechnical engineering, a number of technical contributions by experts and professionals in this area are included. The work is the outcome of deliberations at various conferences in the area conducted by Prof. G.L. Sivakumar Babu and Dr. V.V.S. Rao as secretary and Chairman of Technical Committee on Forensic Geotechnical Engineering of

human drama unfolding in a different culture. The volunteer may struggle mightily to be understood, but his attempts can be for naught if he misunderstands the framework of his role. Unfortunately, in spite of Peace Corps training, the only way a Peace Corps volunteer can understand the framework of his or her Peace Corps role is to live inside it, or even, as in the case of author James Jouppi, return to the site where he was stationed without the trappings of Peace Corps. In August of 1971, Jouppi arrived in Thailand as part of Peace Corps Thailand Group 38, a civil engineering group slated to work in the most communist-sensitive and most poverty-stricken areas of Thailand for Thailand's Community

Development Department. In *War of Hearts and Minds*, he documents the challenges of working inside the Peace Corps system, both prior to his work areas being designated red and after that time as well, before moving on to his attempts to work outside the Peace Corps system. Augmented with maps, photographs, and letters, *War of Hearts and Minds* offers a compelling look into both the politics of Nixon-era America and that of staunchly anti-communist Thailand as Thailand fought a shadow war adjoining the one that was raging in Vietnam and Laos. In his final chapters, Jouppi follows threads from Thailand as they unfold in American culture before providing insights for possible strategies in the future

***This Civil Engineering Book is one-of-a-kind. This book is structured to raise the level of expertise in Civil Engineering and to improve the competitiveness in the global markets. A civil engineer is someone who applies scientific knowledge to improve infrastructure and common utilities that meet basic human needs. Civil engineers plan, design and manage large construction projects. This could include bridges, buildings, dams, tunnels, buildings, airports, water and sewage systems, transport links and other major structures. They use***

*computer modelling software and data from surveys, tests and maps to create project blueprints. These plans advise contractors on the best course of action and help minimise environmental impact and risk. Buildings and bridges are often the first structures to come to mind, because they are the most obvious engineering creations. But civil engineers are also responsible for less visible creations and contributions. Every time we open a water faucet, we expect water to come out, without thinking that civil engineers made it possible, in many cases by designing systems that transport water to cities from mountain sources that are sometimes hundreds of miles*

The Roman aqueducts, the great European cathedrals, and the earliest metal bridges were built by highly skilled forerunners of the modern civil engineer. These craftsmen of old relied on their intuition, trade skills, and experience-based design rules, or heuristics, derived from years of trial and error experiments but rarely passed on to the next generation.
