The Handbook of Epistemic Cognition brings together leading work from across disciplines, to provide a comprehensive overview of an increasingly important topic: how people acquire, understand, justify, change, and use knowledge in formal and informal contexts. Research into inquiry, understanding, and discovery within academic disciplines has progressed from general models of conceptual change to a focus upon the learning trajectories that lead to expert-like conceptualizations, skills, and performance. Outside of academic domains, issues of who and what to believe, and how to integrate multiple sources of information into coherent and useful knowledge, have arisen as primary challenges of the 21st century. In six sections, scholars write within and across fields to focus and advance the role of epistemic cognition in education. With special attention to how researchers across disciplines can communicate and collaborate more effectively, this book will be an invaluable resource for anyone interested in the future of knowledge and knowing. "Teaching History with Big Ideas is the book we've been waiting for. Chapters are written by teachers who are achingly honest about their struggles and triumphs, candid about frustrations with principals or their settings, aware when they teach in a privileged school, and ambitious in their goals for teaching and learning. This book provides a model for the field to emulate and develop."---David Gerwin, associate professor of social studies and history, Queens College, CUNY

"This engaging, accessible book features narratives written by teachers who...decided to try something new. The teachers' insightful stories, combined with the editors' practical recommendations, leave no doubt that ambitious teaching is an arduous journey with changing itineraries and destinations."---Elizabeth Anne Washington, professor of social studies education, University of Florida

"Grant and Gradwell have compiled a series of powerful cases of ambitious teaching that highlight the challenging, complex, and messy world of working in a high stakes testing environment...This book clearly highlights how scary it is to move away from teaching to the test but how rewarding and powerful that decision can be."---Stephanie van Hover, associate professor of social studies education, University of Virginia

"In this lively and honest book, Grant and Gradwell breathe life into the concept of 'ambitious teaching' and then pass the pen to eight teachers who describe in specific detail how they learned to use important questions and inquiry to improve the quality of learning in their classrooms. This is an important book for social studies educators who recognize that we need to move away from content without questions and teaching without meaningful inquiry."---Diana Hess, professor of curriculum and instruction, University of Wisconsin--Madison

Ways of the World is the textbook preferred by AP World History teachers and students across North America. Like the AP course it supports, Ways of the World focuses on significant historical trends, themes, and developments in world history. Author Robert W. Strayer provides a thoughtful and insightful synthesis that helps students see the big picture. Each chapter then culminates with collections of primary sources (written and visual) organized around a particular theme, issue, or question, thus allowing students to consider the evidence the way historians do. This second edition includes materials and supplements written specifically for the AP course, including an AP Skills Primer and AP Chapter Wrap-Ups, an Annotated Teacher's Edition, and more.

New technologies have radically transformed our relationship to information in general and to little bits of information in particular. The assessment of history learning, which for a century has valued those little bits as the centerpiece of its practice, now faces not only an unprecedented glut but a disconnect with what is valued in history education. More complex processes—historical thinking, historical consciousness or historical sense making—demand more complex assessments. At the same time, advances in scholarship on assessment open up new possibilities. For this volume, Kadriye Ercikan and Peter Seixas have assembled an international array of experts who have, collectively, moved the

fields of history education and assessment forward. Their various approaches negotiate the sometimes-conflicting demands of theoretical sophistication, empirically demonstrated validity and practical efficiency. Key issues include articulating the cognitive goals of history education, the relationship between content and procedural knowledge, the impact of students' language literacy on history assessments, and methods of validation in both large scale and classroom assessments. *New Directions in Assessing Historical Thinking* is a critical, research-oriented resource that will advance the conceptualization, design and validation of the next generation of history assessments.
