From our special place in the Orion Arm to the Milky Way's future collision with the Andromeda Galaxy, Milky Way Owners' Workshop Manual looks at the structure, formation and evolution of our home galaxy and its place in the universe. Find out how it compares to other galaxies, why it could be unique, and discover the most exciting and perplexing phenomena within it, including supernovae, the different kinds of stars, planetary systems and radiation, plus the monstrous, super-massive black hole Sagittarius A\*. The various spacecraft that are observing our galaxy are introduced, as they help us to piece together a clearer picture of its structure, investigating the mind-blowing processes within it and giving us a snapshot into its future. A companion volume to our forthcoming Universe Manual and Planets of the Solar System Manual, and complementing Haynes' existing Earth, Moon and Mars manuals, this book provides a down-to-earth, digestible guide to our galaxy for the layperson.

When the German Focke Wulf Fw190 fighter burst onto the scene over France in 1941 it took the RAF by surprise, outperforming the Spitfire Mk V. At the time the RAF described the performance gap as 'a quantum leap'. Its superior performance on the Eastern Front had a significant impact in the air war against the Soviet Union. Graeme Douglas gets under the skin of the Fw190 with the new-build Focke Wulf Fw190A-8 and D-9 models built by the Flug Werk company in Germany. He also describes flying and maintaining the Fw190 in combat.

Good news! This book is your first step toward your independence from fear and anxiety about having a repair issue with your vehicle. No experience necessary! And no tools! You're not going to learn to be a certified technician; rather, I will teach you about your vehicle and the important parts of the vehicle that you need to keep an eye on. I will guide you to where you can get the information about your vehicle that you are going to need to know and the manufacturer wants you to have. No Internet or cell phone necessary. We are going to look at ways to understand the issue with your vehicle and then clearly communicate that information to the repair shop. We will take it slow and cover all the basics. As we move forward, I'll add a layer of relevant information, adding in some cases to what you have already learned. We will avoid information overload or paralysis from analysis. Knowledge is king. Gone are the days of "I only put gas in it." From reading and referring to this book, you are going to understand and be able to take control of your vehicle's wellness and repair. Congratulations!

Ant Anstead's Building a Special brings the Haynes story full circle, coming 61 years after the original Building a 750 Special was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special'. Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle

This is renewed interest in the Moon in recent years, with the news that a Chinese lunar rover landed on the Moon in January 2014, and NASA announcing that it is looking for private partners to land a robot on the Moon's surface, as the first step in a programme to exploit the commercial opportunities offered by the Moon. Recent lunar expeditions by both orbiting spacecraft and 'landers' have uncovered far more detail about the Moon's surface and geology, including the trail of Neil Armstrong's first walk on the Moon in 1969. This manual explains in simple and straightforward terms, with a wealth of illustrations and photographs, what we have discovered about the Moon over the centuries, along with a general overview of the vehicles involved in the exploration.
