This book presents the findings of the RCOG Study Group findings on genetics underlying reproductive function.

Decades of research have demonstrated that the parent-child dyad and the environment of the family"which includes all primary caregivers"are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the

other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of

parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families,

Both the individual and group levels of building and maintaining commitment are discussed. This book aims to help readers appreciate the many-faceted relationship between Christianity, one of the world's major faith traditions, and the practice of psychiatry. Chapter authors in this book first consider challenges posed by historical antagonisms,

Next, others explore both how Christians often experience conditions such as mood and psychotic disorders, disorders in children and adolescents, moral injury and PTSD, and ways that their faith can serve as a resource in their healing. Twelve Step spirituality, originally informed by Christianity, is the subject of a chapter, as are issues raised for Christians by disability, death and

dyng. A set of chapters then focuses on the state of integration of Christian beliefs and practices into psychotherapy, treatment delivery, educational programming, clergy/clinician collaboration, and treatment by a non-Christian psychiatrist. Finally, there are chapters by a mental health professional who has been a patient, a Jewish psychiatrist, a Muslim psychiatrist knowledgeable about Christianity and

psychiatry in the Muslim majority world, and a Christian psychiatrist. These chapters provide context, diversity and personal perspectives. Christianity and Psychiatry is a valuable resource for mental health professionals seeking to understand and address the particular challenges that arise when caring for Christian patients. is through innovation. The conventional wisdom is that only disruptive, nimble startups can innovate; once a business gets bigger and more complex corporate arteriosclerosis sets in. Gary Pisano's remarkable research conducted over three decades, and his extraordinary on-the ground experience with big companies and fast-growing ones that have moved beyond the start-up stage, provides new thinking about how the scale of bigger companies can be leveraged for advantage in innovation. He begins with the simply reality that bigger companies are, well, different.

Demanding that they "be like Uber" is no more realistic than commanding your dog to speak French. Bigger companies are complex. They need to sustain revenue streams from existing businesses, and deal with Wall Street's demands. These organizations require a different set of management practices and approaches--a discipline focused on the strategies, systems and culture for taking their companies to the next level. Big can be beautiful, but it requires creative construction by leaders to avoid the creative destruction that is all-too-often the fate of too many.

Here is the inspiring story of how Dr. Mona Hanna-Attisha, alongside a team of researchers, parents, friends, and community leaders, discovered that the children of Flint, Michigan, were being exposed to lead in their tap water—and then battled her own government and a brutal backlash to expose that truth to the world. Paced like a scientific thriller, *What the Eyes Don't See* reveals how misguided austerity policies, broken democracy, and callous bureaucratic indifference placed an entire city at risk. This book presents the RCOG Study Group findings on pregnant women with renal problems. Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two

public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked

the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring. Employee selection has long

stood at the practical forefront of industrial/organizational psychology. Today's social, business, and economic climates require ongoing adaptations by those who select organizations' personnel, and research on the topic helps gauge the impact of these adaptations and their implications for human performance and potential. The Oxford Handbook of Personnel Assessment and Selection codifies the wealth of new research surrounding employee selection (web-

based assessments, social networking, globalization of organizations), situating them alongside more traditional practices to establish the best and most relevant research for both professionals and academics. Comprising chapters from authors in both the private sector and academia, this volume is organized into seven parts: (1) historical and social context of the field of assessment and selection; (2) research strategies; (3) individual difference constructs that underlie

effective performance; (4) measures of predictor constructs; (5) employee performance and outcome assessment; (6) societal and organizational constraints on selection practice; and (7) implementation and sustainability of selection systems. While providing a comprehensive review of current research and practice, the purpose of this handbook is to provide an up-to-date profile of each of the areas addressed and highlight current questions that deserve additional attention from researchers

and practitioners. This compendium is essential reading for industrial/organizational psychologists and human resource managers.

Research tells us that when most people suffer from a mental health crisis, the first person they turn to for help is not a physician, a psychiatrist, or a social worker, but a pastor, a priest, or a minister. In other words, a leader in their church. Unfortunately, many church leaders are not trained to recognize mental illness and don't know when to refer someone to a

mental health professional. The consequence—unintended yet tragic—is continued and unnecessary suffering. *Madness and Grace* is a comprehensive guide for church ministry to alleviate this situation. Written by Dr. Matthew Stanford, the book is carefully constructed to help build competency in detecting a wide spectrum of mental disorders, such as knowing when a person is contemplating suicide based on telltale patterns of speech. It also explodes common discriminatory myths that stigmatize people with mental illness, such as the myth that they are more prone to violence than others. Dr. Stanford has treated clients throughout his career who were afflicted with all manner of mental disorders. In

Madness and Grace, he takes the full extent of his experience and makes it accessible and actionable for the lay reader. He begins by explaining what constitutes a mental illness and how these disorders are classified according to science. He next teaches how to notice the presence of a mental illness by listening carefully to phraseology, observing behavior, and asking discerning questions. He goes on to discuss methods of treatment, common religious concerns about mental health, and ways church communities can support people on the road to recovery. As a Christian, Dr. Stanford wants his fellow believers to know that acknowledging and seeking help for a mental illness is not a sign of weak faith. That's why, in addition to

sharing his medical expertise with church leaders, he commends pertinent biblical passages that underscore God's concern for our mental wellbeing. "When working with those in severe psychological distress," he writes, "compassion and grace are always the first line of pastoral care."

(AUD) is a major public health problem in the United States. The estimated 12-month and lifetime prevalence values for AUD are 13.9% and 29.1%, respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than \$200 billion annually. Despite its high prevalence and numerous negative

consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12-month diagnosis of AUD receive any treatment.
