Transparent in the visible range, phase objects can be studied in the optical range using holographic interferometry. Typically, the holograms are recorded on high-resolving-power holographic photo materials, but a lower spatial resolution is sufficient for successful research in many scientific applications. Holographic Interferometry: A Mach-Zehnder Approach offers practical guidance to research scientists and engineers using Mach-Zehnder holographic interferometry methods to study phase objects in the laboratory. The Mach-Zehnder approach allows the use of standard photographic film and electronic CCD/CMOS sensors with low resolving power, making it a simpler and more affordable option for testing many types of phase objects. This book demonstrates how to use standard

photographic film for the optical recording and reconstruction of Mach-Zehnder holograms. It also illustrates techniques for using CCD/CMOS cameras to digitally record Mach-Zehnder holograms/interferograms of transparent objects. Bringing together original research and information scattered throughout existing literature, this book focuses on the holographic reference beam and shearing interferometry methods. In particular, it looks at how these methods and optical schemes can be directly applied to testing aerodynamic flows, as well as to plasmas, shocks, and waves in noncoherent laser-matter interactions. Numerous reconstructed and classic interferograms, deflectograms, and Schlierengrams illustrate the material, helping readers develop and design their own optimal optical scheme and choose applicable details to apply the approach. Describing methods in a mathematically simple and accessible way, this book is also suitable for graduate students in the fields of aerospace engineering and optics, as well as those in laser, thermal, and plasma physics.

Art Wolfe's immersive photos capture the wonder humans have felt about trees for millennia. From the ancient Assyrian Tree of Life to the Iroquois peoples' Tree of Peace, trees have played an archetypal role in human culture and spirituality since time immemorial. An integral part of a variety of faiths—from Buddhism and Hinduism to Nordic and aboriginal religions—trees were venerated long before any written historical records existed. This sense of reverence and wonder is beautifully evoked in these vivid images from legendary photographer Art Wolfe. The new, giftable format of his celebrated book on the topic, *Trees*, focuses on both individual specimens and entire forests, offering a sweeping yet intimate look at an arboreal world that spans six continents. To accompany these timeless images, author Gregory McNamee weaves a diverse and global account of the myths, cultures, and traditions that convey the long-standing symbiosis between trees and humans, and renowned ethnobotanist Wade Davis anchors the text with a penetrating introduction. Humans have always shared this planet with trees, and this book is both a breathtaking journey through and an homage to that relationship and its past, present, and future—now in a new, beautiful, and highly giftable format.

In this volume of the Shawn M. Tomlinson Guide to Photography Series, Tomlinson takes an in-depth look at the Sony A100 and continues his series devoted to helping budding photographers get started without breaking the bank. In this case, Tomlinson considers the first Sony DSLR to be great start.

"After waiting the proper mourning time for Minolta - about a year - Sony took the black armband off and unveiled its first DSLR, the A100. And why is this important now? It's vitally important if you are a beginning photographer and want to get a great DSLR and great lenses that won't mortgage your house."
