of the basic principles, clinical indications, typical and atypical appearances, normal variations and artifacts, advantages, limitations, and pitfalls. Consideration is also given to emerging roles for PET/CT in head and neck cancer, including radiotherapy planning and treatment response monitoring, and to radiotracers beyond FDG. In addition, succinct information is provided on clinical presentation, diagnosis, staging, pathology, management, and other diagnostic imaging techniques. A brief discourse on the practice of guideline adoption is included. The book is published

within the Springer series Clinicians' Guides to Radionuclide Hybrid Imaging (compiled under the auspices of the British Nuclear Medicine Society) and will be an excellent asset for clinicians, nuclear medicine physicians, radiologists, radiographers, technologists, and nurses who work in the field of head and neck cancer.

Head and neck cancer (HNC) is a rapidly evolving field of medical science. Tremendous progress has been made over the past five decades in revealing the basic molecular biology involved in the disease process, developing and adopting more effective

organ-preserving treatment protocols and refining surgical ablative and reconstructive approaches to facilitate functional restoration of patients without compromising survival. We now have a much clearer understanding of the disease, its management and the rehabilitation of patients. But there is still much to be done. This book aims to cover a range of exciting new findings in clinical sciences, basic sciences and allied specialties with an emphasis on their relevance to HNC. This work promises to improve preventive and therapeutic strategies and will hopefully culminate in improved outcomes of HNC.

The contributions have been made by established leaders in the field and every effort has been made to address the issue in a comprehensive, yet concise, manner for the benefit of readers. We believe that this book will be of value to established/in-training clinicians, scientists, allied professionals, as well as medical students who have inquisitive minds and wish to further enhance their knowledge of HNC.

Vehicle Electrical and Electronic Systems courses and qualifications. As electrical and electronic systems become increasingly more complex and fundamental to the workings of modern vehicles, understanding these systems is essential for automotive technicians. For students new to the subject, this book will help to develop this knowledge, but will also assist experienced technicians in keeping up with recent technological advances. This new edition includes information on development in pass-through technology, multiplexing, and engine control systems. In full colour and covering the latest course specifications, this is the guide that no student enrolled on an automotive maintenance and repair course should be without. Designed to make learning easier, this book contains: Photographs, flow charts, quick reference tables, overview

essays, scholars write about how life events brought them to their subject matter. They place their narratives in the larger context of world politics, culture, and history. Autobiographical International Relations believes that the fictive distancing associated with academic prose creates disaffection in both readers and writers. In contrast, these essays demonstrate how to reengage the "I" while simultaneously sustaining theoretical precision and historical awareness. Authors highlight their motives, their desires, and their wounds. By connecting their

theoretical and practical engagements with their needs and wounds, and by working within the overlap between theory, history, and autobiography, these essays aim to increase the clarity, urgency, and meaningfulness of academic work. These essays are autobiographical, but focused on the academic aspect of authors' lives. Specifically, they are set within the domain of international relations/global politics. They are theoretical, but geared to demonstrate that theoretical decisions emerge from theorists' needs and wounds.

Theoretical precision, rather than being explicitly deduced, is instead immanent to the autobiographical and the historical/cultural narrative each author portrays. And, these essays are framed in historical/cultural terms, but seek to bind together theory, history, culture, and the personal into a differentiated and vibrant whole. This book moves the field of International Relations towards greater candidness about how personal narrative influences theoretical articulations. No such volume currently exists in the field of international relations.
