FantasySalesTeam games Extend Dynamics CRM 2016 with custom plug-ins and add-ons IBM WebSphere® Message Broker is a lightweight, advanced enterprise service bus (ESB) that provides a broad range of integration capabilities that enable companies to rapidly integrate internal applications and connect to partner applications. Messages from business applications can be transformed, augmented and routed to other business applications. The types and complexity of the integration required will vary by company, applications. The types and complexity of the integration required will vary by company, applications. using message flows. Through message flows, messages from business applications can be transformed, augmented, and routed to other business applications. Message flows are created by connecting nodes together. A wide selection of built-in nodes are provided with WebSphere Message Broker. These nodes perform tasks that are associated with message routing, transformation, and enrichment. Message flows are created and tested using the Message Broker Toolkit, a sophisticated, easy-to-use programming tool that provides a full range of programming aids. This IBM® Redbooks® publication focuses on two specific integration requirements that apply to many midmarket companies. The first is the ability to use WebSphere Message Broker to integrate Microsoft.NET applications into a broader connectivity solution. WebSphere Message Broker V8 introduces the ability to integrate with existing Microsoft .NET assembly can be called from within a message flow and the WebSphere Message Broker runtime can host and run .NET code. Solutions explored in this book cover connectivity to applications using Windows Communications Framework (WCF), Microsoft Message Queuing, Microsoft Dynamics CRM, and other Dynamics

specifically with WebSphere MQ File Transfer Edition and IBM Sterling Connect Direct. Microsoft Dynamics GP is a popular enterprise resource planning (ERP) application used by tens of thousands of sites around the world to keep the accounting, financial, distribution and manufacturing functions running day in and day out. To do this Microsoft Dynamics GP was accessed via client software installed directly on the user's computer, or a terminal server. Microsoft Dynamics GP 2013 saw the introduction of the web client. The installation of the web client is a little more complex than that of the classic desktop client. This book provides quides, illustrations and links to useful resources. Who This Book Is For This book is aimed at Dynamics GP users and partners who intend to implement the web client for Microsoft Dynamics GP for individual clients; much of the process for installing a multi-tenant deployment is the same as the scale-out one, but this book is specifically focusing on the scale-out deployment. This book assumes you have a knowledge of Windows Server, Active Directory for creating users and groups, IIS and application deployments. A basic knowledge of Microsoft Dynamics GP is also required. What This Book Covers This book covers the scaleout deployment of the Microsoft Dynamics GP 2013 R2 web client, from prerequisites through installation to logging in, using and managing. An upgrade of the Microsoft Dynamics GP 2013 R2 is covered, before closing with a look at

troubleshooting problems. A standard tutorial-based approach covering Microsoft Dynamics GP 2013 and its six financial modules. The book is intended to allow users to improve their system use and workflow by introducing new modules. The book is for you're a Dynamics GP partner, or Dynamics GP user, primarily focused on delivering application optimizations. This book assumes that you have a working knowledge of Microsoft Dynamics GP and have an understanding of the requirements of financial management.
