Prison education should be a
top priority issue in most
societies. Prison conditions
must not infringe human
rights and dignity and must

offer meaningful treatment programmes in order to support inmates in their rehabilitation and reintegration in society. The use of ICTs within a penitentiary context plays a crucial role in that. The

However, it is still struggling to find a foothold in educational practice. We contend that the root causes of this discrepancy are the lack of articulation of design practices and methods,

along with a shortage of tools and representations to support such practices, a lack of a culture of teacher-as-designer among practitioners, and insufficient theoretical development. The Art and Science of Learning Design (ASLD) explores the frameworks,

Libraries have always been an inspiration for the standards and technologies developed by semantic web activities. However, except for the Dublin Core specification, semantic web and social networking technologies

have not been widely adopted and further developed by major digital library initiatives and projects. Yet semantic technologies offer a new level of flexibility, interoperability, and relationships for digital repositories. Kruk and McDaniel

present semantic web-related aspects of current digital library activities, and introduce their functionality; they show examples ranging from general architectural descriptions to detailed usages of specific ontologies, and thus stimulate the

awareness of researchers, engineers, and potential users of those technologies. Their presentation is completed by chapters on existing prototype systems such as JeromeDL, BRICKS, and Greenstone, as well as a look into the possible future

This book provides an up-to-date,
coherent and comprehensive
treatment of digital scholarly
editing, organized according to the
typical timeline and workflow of the

preparation of an edition: from the choice of the object to edit, the editorial work, post-production and publication, the use of the published edition, to long-term issues and the ultimate significance of the published work. The author

also examines from a theoretical and methodological point of view the issues and problems that emerge during these stages with the application of computational techniques and methods. Building on previous publications on the

topic, the book discusses the most significant developments in digital textual scholarship, claiming that the alterations in traditional editorial practices necessitated by the use of computers impose radical changes in the way we think and manage

texts, documents, editions and the public. It is of interest not only to scholarly editors, but to all involved in publishing and readership in a digital environment in the humanities.

Formative assessment is one of

the best ways to increase student learning and enhance teacher quality. But effective formative assessment is not part of most classrooms, largely because teachers misunderstand what it is and don't have the

In the updated 2nd edition of this

formative assessment as an
active, continual process in

which teachers and students

What strategy or strategies can

are conditioned by the specific features of different scripts and languages, and deeply influence the possibility to perform searches on texts and the approach to the lexicographic study of such under-resourced

languages. The second part of the volume is dedicated to the initiatives aimed at fostering aggregation, dissemination and the reuse of epigraphic materials, and to discuss issues of interoperability. The common

theme of the volume is the relationship between the compliance with the theoretic tools and the methodologies developed by each different tradition of studies, and, on the other side, the necessity of

adopting a common framework in order to produce commensurable and shareable results. The final question is whether the computational approach is changing the way epigraphy is studied, to the

This book opens up new
theoretical perspectives and
practical possibilities to analyze
the learning opportunities
emerging in the transitional

zones between educational institutions and workplaces.

International contributors draw on a range of ideas developed within constructivistic, socio-cultural and activity theory and focus in different ways on the processes of transition, transfer

and boundary crossing as central to learning, especially in vocational and professional education contexts. The book begins with four chapters which locate the renewed interest in transfer and the emerging interest in boundary crossing in

the context of knowledge society
in terms of the following: the
historical development of
learning theories, the theoretical
advances made in socio-cultural
approaches as regards learning,
transfer and boundary crossing,
and sociological approaches to

links between school and workplace learning. Part II contains seven chapters that present studies on learning and transfer in different domains of vocational and professional education. Part III presents three studies that describe and analyze

learning in workplaces. The chapters of these three parts report on a range of empirical and developmental studies which have developed new 'tools for learning and transfer' in vocational education. The book ends with an epilogue consisting

Progressive problem solvers stay healthier, live longer, and experience the intense mental pleasure known as 'flow'. They repeatedly go beyond

their well-learned procedures, avoid getting into ruts, and surpass themselves by reformulating problems at new and more complex levels. They are able to transform insoluble predicaments into soluble problems, to the benefit of everyone.

This book covers novel aspects of
epilepsy without ignoring its
foundation and therefore, apart from
the classic issues that cannot be

missing in any book about epilepsy, we introduced novel aspects related with epilepsy and neurocysticercosis as a leading cause of epilepsy in developing countries. We are looking forward with confidence and pride in the vital role that this book has to play for a new

vision and mission. Therefore, we introduce novel aspects of epilepsy related to its impact on reproductive functions, oral health and epilepsy secondary to tuberous sclerosis, mitochondrial disorders and lisosomal storage disorders.

This publication evaluates the institutional record on conflict prevention, identifies current trends in conflict prevention practice, and makes recommendations on improving organizational capacity. The first part of the book addresses the question:

What is successful conflict prevention?
The second part reflects on how existing mechanisms and instruments for conflict prevention can be properly evaluated and improved, focusing on institutions at the forefront of conflict prevention policy such as EU, the

OSCE and NATO. The contributors to this book are a diverse group of individuals involved in conflict prevention activities including, scholars from developed and developing countries, and practitioners with insights on the work of regional

reflection on the practices involved in producing, editing and reading digital scholarly editions—and the theories that underpin them. The unrelenting progress of computer technology has changed the nature of textual scholarship at the most fundamental

level: the way editors and scholars work, the tools they use to do such work and the research questions they attempt to answer have all been affected. Each of the essays in Digital Scholarly Editing approaches these changes with a different

methodological consideration in mind. Together, they make a compelling case for re-evaluating the foundation of the discipline—one that tests its assertions against manuscripts and printed works from across literary history, and the globe. The sheer breadth of Digital

Scholarly Editing, along with its successful integration of theory and practice, help redefine a rapidly-changing field, as its firm grounding and future-looking ambit ensure the work will be an indispensable starting point for further scholarship. This
