

Economic Zoology Of Shukla Upadhyay

Agriculture to Zoology: Information Literacy in the Life Sciences sets the stage for purposefully integrating information literacy activities within the subject-specific content of the life sciences. The book is written for librarians and other professionals who teach information literacy skills, especially those in the science disciplines, and most especially the life sciences. It is also intended to be helpful to secondary school teachers, college faculty who teach life science-related subjects, library school students, and others interested in information literacy and science education. Anyone wanting to learn more about the Earth's life sciences, from citizen to scientist, will benefit as well. The book's seven chapters fill a gap with varying perspectives of literacy instruction in the life sciences and include resources identified by academic librarians as important for use in subject-specific research in higher education.

Contributors are longtime specialists in the fields of the life sciences, science and information literacy, scientific and electronic communication, assessment, and more, including Arctic and Antarctic information. Specialized focus on information literacy in the life science disciplines, rather than information literacy in general Discussion of library instruction, featuring methods, tools, and assignments to engage students in different areas of the life sciences Chapters on specific life science subjects highlight traditional as well as non-traditional sources

Recently Applied and Economic Zoology has been included in national syllabus by UGC for undergraduates. The book examines insect pests, animal pests, natural enemies, beneficial insects, beneficial animals, agricultural chemicals and more. The current book is blueprint for undergraduate students to aware about our natural wild life and its economic importance. The book contains four chapters with illustrations and boxed materials. In the chapter 1, we have covered parasitology, in which we have deliberately discussed about parasites of domestic animals and human, structures, life cycles, pathogenicity, diseases, symptoms and it control. In chapter 2, we consciously talk about vectors and pests. Here, we covered life cycle and control of pest and vectors such as Gundhi bug, Sugarcane leafhopper, Rodents, Termites and Mosquitoes. Chapter 3 is about animal breeding and animal cultures. In this, we started with basic introduction about breeding and culture, difference between them and then detailed discussion about Animals and Human Society, Animal Breeding, Genetic engineering applications in Animal Breeding, Breeding and Variation, Aquaculture, Pisciculture, Poultry farming, Sericulture, Apiculture, Lac-culture. The last chapter has wild life of India. In this chapter we provided detail for Wild Life Protection and Acts, Documentation of Wild Life, Rare, Endangered and Endemic species, Protected Area Network, Conservation of Wild Life, In-situ and Ex-situ conservation.

Dr. Shailendra Kumar Singh working as Assistant Professor in Deptt. of Zoology, Tilak Dhari P.G. College, Jaunpur since 2004. Dr. Singh has a lot of experience of teaching in Undergraduate and Postgraduate Classes. During program he trained several biological techniques under the guidance of Prot. Ajai Singh, Deptt. of Zoology, DDU Gorakhpur University, Gorakhpur. Dr. Singh renowned academician, beyond teaching he involved in various activities in College. He is actively involved in College Administration as Proctor, and Member of Admission committee in UG and PG classes. Dr. Singh attend more than two dorens National and International Conferences & presented their paper also. Dr. Singh published more than one dozen research papers in Peer Reviewed UGC Care listed Journal. He is the life member of various societies and got prestigious award from GESA, New Delhi. Also this Dr. Singh has certificate in Environmental Science. Under the supervision of Dr. Singh two students are doing Ph.D also.

Applied and Economic Zoology

A Laboratory Guide for Beginners in Zoology

Preface: In planning the present work the aim of the authors has been to provide a manual embodying a course of study adapted to the requirements of the student chiefly in higher classes of schools, and to some extent in junior classes of universities. To make this, within the necessarily narrow limits of space imposed, anything more than a bare synopsis, it has been necessary to restrict the extent of the ground covered. This has been done (1) by leaving out altogether certain classes of existing animals; (2) by omitting all descriptions of extinct groups; (3) by dealing only very briefly with embryology. Opinions must differ as to the best selection of groups for an elementary manual of this kind. But broadly, there can, it has appeared to us, be little doubt that what should be omitted, or only briefly dealt with, are the groups of rare occurrence and uncertain relationships, the greater part of the space being devoted to the more familiar representatives of the large phyla. A course of laboratory and museum instruction, supplemented by work in the field and on the seashore, is absolutely necessary in order that any sound knowledge of zoology may be attained. The present manual does not provide such instruction, but is intended to be used in association with it, and the examples selected for description are such as may under most circumstances be readily obtained. The general plan is similar to that followed in the Text-Book of Zoology by the same authors, but the restricted space has necessitated considerable modifications. We have not adopted the method, followed in various recent manuals, of beginning with one of the larger Invertebrata or with a vertebrate, and working from that upwards and downwards. The reasons given for such a mode of treatment we understand to be that if we begin with the simplest animals, the Protozoa, we discourage and embarrass the beginner by introducing him at once into a world entirely new to him requiring him at the same time to learn the use of an entirely unfamiliar instrument the microscope. But in our opinion, the difficulty is much less than is alleged by the advocates of the alternative method, and the advantage of presenting the facts at the outset in a natural and logical order by far outweigh any such disadvantages. We are convinced that any general acquaintance which the student may possess beforehand with a rabbit or a crayfish will be of little real value to him when he begins to take up seriously the study of its structure. Moreover an elementary knowledge of the use of the microscope is absolutely essential to any adequate study of Zoology as an intellectual discipline, and this difficulty, such as it is, may as well be met first as last. Owing to the lamented death of Professor T. Jeffrey Parker, at a time when but little progress had been made with this work, his actual share in it has been but slight: but as it was planned between us, and the earlier parts had the advantage of his revision, and more especially as it owes a great deal to his work in the Text-Book it has been thought right to let it appear under our joint names as originally intended. I have to express very great indebtedness to Professor W. Newton Parker for the pains he has taken in revising the proof-sheets and for many valuable suggestions which he has made during the progress of the work.--William A. Haskell.

Marketing management is the art and science of choosing target markets and getting, keeping and growing customers through creating, delivering, and communicating superior customer value. Marketing managers are often responsible for influencing the level, timing, and composition of customer demand in a manner that will achieve the company's objectives. The role of a marketing manager can vary significantly based on a business size, corporate culture, and industry context.
