EDEXCEL B GCSE GEOGRAPHY EXAM PRACTICE 2

***'For geographers across the globe this book provides the arguments for a return to the teaching of geography and why they should reject the politicisation of the subject by education policy makers and politicians. Standish's careful critique shows the necessity of a depoliticised geography curriculum the irony of which would be that it would ensure that every child could point to Iraq, Iran and Afghanistan on a map.'* Prof. Dennis Hayes - Oxford Brookes University, UK 'A prescient and**

critical analysis of the changing face of geography teaching. This book deserves to be widely read and debated. Alex Standish's book puts current trends in geography teaching in historical and critical context. It comprises a forthright and timely defence of geographical education for its own sake.' Dr Jim Butcher, FRSA, Department of Sport Science, Tourism and Leisure, Canterbury Christ Church University. Since the early 1990s, educational policy makers and some subject leaders have been seeking to fundamentally change the teaching of geography in UK and US schools, from a subject which encourages students to explore spatial concepts, ideas and skills, to a more ethics based subject concerned with the promotion of environmentalism, cultural diversity and social justice. In this book the new approach is critically examined, within a historical and ideological context, addressing a number of fundamental questions: Should geography be used as a tool for the delivery of citizenship ideals? How does this affect the intellectual and moral value of geographical education for young people? If the state and teachers are taking more responsibility for the values, attitudes and emotional responses of students, how will they learn to develop these qualities for themselves? If global perspectives shift the focus of education from learning about the outside world to learning about the self, what is its vision of social progress and conception of social change? This book advocates a return to liberal models of education, arguing that the new approach to geography currently being promoted for schools fundamentally undermines the educational value of the subject, and the freedom of young people to shape the world in which they live. A vital resource for teachers and student teachers alike, Global Perspectives in the Geography Curriculum makes a significant contribution to the growing debate about the future direction of the discipline itself.

Is there life after death for secondary education? This book focuses upon the quality of learning. 'Reform', so called, too often begins with qualifications, examinations, institutional provision, paths of progression. All those are very important, but their value lies in the support they give to learners and their learning in its different forms. One needs to start with the aims of education and then with what it means to learn (practically, theoretically, morally) and with the very many different needs of the learners. That is what this book aims to do. In so doing, it will be both philosophical in analysis and empirical in example. So much is happening 'from down below' that goes unrecognised by policy makers. But innovations too often get hampered by government interventions, by a bureaucratic mentality and by failure to spread good practice. The general argument of the book, therefore, will be illustrated throughout with detailed references to practical developments in schools, colleges, the third sector, youth work, independent training providers and professional bodies - across several countries. The book builds on Education for All, which was based on 14-19 research into secondary education, this book transcends the particularities of England and Wales and digs more deeply into those issues which are at the heart of educational controversy, policy and practices and which survive the transience of political change and controversy. The issues (the aims of education, standards of performance, the consequent vision of learning, the role of teachers, progression from school to higher or further education and into employment, the provision of such education and training and the control of education) are by no means confined to the UK, or to this day and age. Pring identifies similar problems in other countries such as the USA, Germany and France - and indeed in the Greece of Plato and

Aristotle and offers solutions with a comparative perspective. It is a critical time. Old patterns of education and its provision are less and less suitable for facing the twenty-first century. The patterns and modes of communication have changed radically in a few years and those changes are quickening in pace. The economic context has been transformed, affecting the skills and knowledge needed for employment. The social world of young people raises fresh demands, hopes and fears. A global recession has affected young people disproportionately making quality of life and self-fulfilment ever more difficult to attain. In addressing 'learning' and the 'learners' first and foremost, the book will argue for a wider vision of learning and a more varied pattern of provision. Old structures must give way to new. New editions of the bestselling Revise GCSE Study Guides with a fresh new look and updated content in line with curriculum changes. Revise GCSE contains everything students need to achieve the GCSE grade they want. Each title has been written by a GCSE examiner to help boost students' learning and focus their revision. Each title provides complete curriculum coverage with clearly marked exam board labels so students can easily adapt the content to fit the course they are studying. Revise GCSE is an ideal course companion throughout a student's GCSE study and acts as the ultimate Study Guide throughout their revision.

Pearson Edexcel GCSE (9-1) Mathematics Higher Student Book 1

Reinforce understanding throughout the course with clear topic summaries and sample questions and answers to help students target higher grades. Written by experienced subject experts Cameron Dunn and Michael Witherick, this Student Guide is divided into two key sections - content guidance, and sample questions and answers. Content guidance will: - Develop understanding of key concepts and terminology in key physical geography topics tectonic processes and hazards, landscape systems, processes and change (glaciated and coastal), the water cycle and water insecurity, and the carbon cycle and energy security. - Consolidate knowledge with 'knowledge check questions' at the end of each topic and answers in the back of the book. Sample questions and answers will: - Build understanding of the different question types, so that students can approach each question with confidence. - Enable students to target top grades in their exam paper with sample answers and commentary explaining exactly why marks have been awarded.

This text provides additional exercises written to complement those in the Edexcel GCSE mathematics course textbooks. Answers to all the questions are provided allowing students to self-test. The Higher text is targeted towards higher ability students.

Debates in Geography Education encourages early career teachers, experienced teachers and teacher educators to engage with and reflect on key issues, concepts and debates. It aims to enable readers to reach their own informed judgements with deeper theoretical knowledge and understanding. The second edition is fully updated in light of the latest research, policy and practice in the field, as well as key changes to the curriculum and examination specifications. Expert contributors provide a range of perspectives on international, historical and policy contexts in order to deepen our understanding of significant debates in geography education. Key debates include: geography's identity as an academic discipline; what constitutes knowledge in geography; places and regional geography; what it means to think geographically; constructing the curriculum; how we link assessment to making progress in geography; the contribution of fieldwork and outdoor experiences; technology and the use of Geographical Information; school geography and employability; understanding the gap between school and university geography; evidence-based practice and research in geography education. The comprehensive, rigorous coverage of these key issues, together with carefully annotated selected further reading, will help support and shape further research and writing. Debates in Geography Education is a key resource that is essential reading for all teachers and researchers who wish to extend their grasp of the place of geography in education. Mark Jones is Senior Lecturer in Education at the University of the West of England, Bristol, UK David Lambert is Professor of Geography Education at UCL Institute of Education, London, UK
