This Festschrift is published in honor of Rodney G. Downey, eminent logician and computer scientist, surfer and Scottish country dancer, on the occasion of his 60th birthday. The Festschrift contains papers and laudations that showcase the broad and important scientific, leadership and mentoring contributions made by Rod during his distinguished career. The volume contains 42 papers presenting original unpublished research, or expository and survey results in Turing degrees, computably enumerable sets, computable algebra, computable model theory, algorithmic randomness, reverse mathematics, and parameterized complexity, all areas in which Rod Downey has had significant interests and influence. The volume contains several surveys that make the topics accessible to non-specialists while also including some proofs that illustrate the flavor of the fields.

This book reports on the current state of meristemotherapy (also called gemmotherapy or budtherapy) and its possible future directions. Meristemotherapy focuses on the growth of plants, and is based on analytical studies, pre-clinic research, clinical trials and activity tests. The book investigates the determination of preparation methods, collateral effects, posology, and administration methods.

In this innovative book Fabio Folgheraiter presents a systematic introduction to networking and reflexive practice in social work. The text explores how the interested parties in social care can acquire a shared power in care planning and decision making and that when this networking occurs, the efficacy of caring initiatives increases.

Macrotrend of our present: instructions for use. We live in the age of endless change. Technological innovations are profoundly and irreversibly affecting our everyday life. Progress seems somehow to subvert individual and collective parametres in such a way that often we tend to ask ourselves what we can do for machines more than what they can do for us. In these pages the author shares a participating and curious gaze to the deep changes of our times, with the ongoing trend and to gain new keys to interpretation. From the new technologies of AI and ubiquitous computing to the growing issues of international security , from the so called Fourth Industrial Revolution to the new paradigm of the sharing economy, from the role of the technological mammoths in the new world order to the changes in the labour market and the increasing societal inequality: a bunch of burning issues are here addressed both with intellectual commitment and conversation and future leaders to shape new policies, both at business and governmental level.

Covering research at the frontier of this field, Privacy-Aware Knowledge Discovery: Novel Applications and New Techniques presents state-of-the-art privacy-preserving data mining techniques for application domains, such as medicine and social networks, that face the increasing heterogeneity and complexity of new forms of data. Renowned authorities from prominent organizations not only cover well-established results—they also explore complex domains where privacy issues are generally clear and well defined, but the solutions are still preliminary and in continuous development. Divided into seven parts, the book provides in-depth coverage of the most novel reference scenarios for privacy-preserving techniques. The first part gives general techniques that can be applied to various applications discussed in the rest of the book. The second section focuses on the sanitization of network traces and privacy in data stream mining. After the third part on privacy in spatio-temporal data mining and mobility data analysis, the book examines time series analysis in the fourth section, explaining how a perturbation method and a segment-based method can tackle privacy issues of time series data. The fifth section on biomedical data addresses genomic data as well as the problem of privacy-aware information sharing of health data. In the sixth section on web applications, the book deals with query log mining and web recommender systems. The final part on social networks analyzes privacy issues related to the management of social network data under different perspectives. While several new results have recently occurred in the privacy, database, and data mining research communities, a uniform presentation of up-to-date techniques and applications is lacking. Filling this void, Privacy-Aware Knowledge Discovery presents novel algorithms, patterns, and models, along with a significant collection of open problems for future investigation.

Celebrates the life and work of J.K. Rowling, and provides answers to such questions as where did the name "Harry Potter" come from, what was J.K. Rowling like as a child, and who were some of her favorite authors.

This much acclaimed book has emerged as neo-pragmatism's most significant contribution to contemporary aesthetics. By articulating a deeply embodied notion of aesthetic experience and the art of living, and by providing a compellingly rigorous defense of popular art—crowned by a pioneer study of hip hop—Richard Shusterman reorients aesthetics towards a fresher, more relevant, and socially progressive agenda. The second edition contains an introduction where Shusterman responds to his critics, and it concludes with an added chapter that formulates his novel notion of somaesthetics.

English by the Nature Method. The aim of the natural approach is to develop communicative skills, and it is primarily intended to be used with beginning learners.It is presented as a set of principles that can apply to a wide range of learners and teaching situations, and concrete objectives depend on the specific context in which it is used.Terrell outlines three basic principles of the approach: "Focus of instruction is on communication rather than its form." "Speech production comes slowly and is never forced." "Early speech goes through natural stages (yes or no response, one- word answers, lists of words, short phrases, complete sentences.)"These principles result in classrooms where the teacher emphasizes interesting, comprehensible input and low-anxiety situations.

Schopenhauer is one of the few philosophers who can be generally understood without a commentary. All his theories claim to be drawn direct from the facts, to be suggested by observation, and to interpret the world as it is; and whatever view he takes, he is constant in his appeal to the experience of common life. This characteristic endows his style with a freshness and vigor which would be difficult to match in the philosophical writing of any country, and impossible in that of Germany. If it were asked whether there were any circumstances apart from heredity, to which he owed his mental habit, the answer might be found in the abnormal character of his early education, his acquaintance with the world rather than with books, the extensive travels of his boyhood, his ardent pursuit of knowledge for its own sake and without regard to the emoluments and endowments of learning. He was trained in realities even more than in ideas; and hence he is original, forcible, clear, an enemy of all philosophic indefiniteness and obscurity; so that it may well be said of him, in the words of a writer in the Revue Contemporaine, ce n'est pas un philosophe comme les autres, c'est un philosophe qui a vu le monde.
