The book explores the factors that raise a person's risk of suicide: psychological and biological factors including substance abuse, the link between childhood trauma and later suicide, and the impact of family life, economic status, religion, and other social and cultural conditions. The authors review the effectiveness of existing interventions, including mental health practitioners' ability to assess suicide risk among patients. This volume discusses adolescent mental health concerns in non-

Western contexts and situations, ranging from common mental disorders to building life skills. It combines previous literature and empirical work on various disorders to provide a comprehensive account of cognitive behaviour therapy (CBT) for adolescents. The volume covers a wide spectrum of conditions, ranging from anxiety to affective disorders and other associated disorders. It gives a practical guide to the management of disorders with specific focus on case vignettes, outlining session details and specific techniques to be used throughout the intervention plan. A detailed appendix elaborating various CBT techniques is included in the volume. It presumes a basic understanding and training in mental health care and psychotherapy and is useful for professionals: psychologists, counsellors, paediatricians and other practitioners in the field of mental health. It is also useful as a text for courses in health psychology, clinical psychology, adolescent medicine and adolescent psychology.

Core Approaches in Counselling and Psychotherapy is a comprehensive guide to the four main psychological approaches (Humanistic, Psychodynamic, Behavioural and Cognitive) and

introduces several of the most common therapies used today. This textbook contains sufficient coverage to explain all of the most important elements of these core approaches and sufficient depth to provide a detailed analysis of the ten main therapies: Person-Centred Therapy, Psychoanalytic Therapy, Behaviour Therapy, Cognitive Therapy, Gestalt Therapy, Transactional Analysis, Rational Emotive Behaviour Therapy, Cognitive-Behaviour Therapy, Multimodal Therapy and Neurolinguistic Programming. The book focuses on the development of each approach and presents the associated therapy in its historical and psychological context, giving a deeper insight into the theories and clarifying the overlap between different therapies. Presented in a unique style, with a clear layout, rigorous content and extensive resources available online, *Core Approaches in Counselling and Psychotherapy* is an invaluable asset for undergraduate and postgraduate students at all levels of study and is the ideal textbook for any degree or higher-level module in counselling. Play therapy expert Terry Kottman and her colleague Kristin Meany-Walen provide a comprehensive update to this spirited and fun text on integrating Adlerian techniques into play therapy.

Clinicians, school counselors, and students will find this to be the definitive guide for using Adlerian strategies with children to foster positive growth and effective communication with their parents and teachers. After an introduction to the basics of the approach and the concepts of Individual Psychology, the stages of Adlerian play therapy are outlined through step-by-step instructions, detailed treatment plans, an ongoing case study, and numerous vignettes. In addition to presenting up-to-date information on trends in play therapy, this latest edition emphasizes the current climate of evidence-based treatment and includes a new chapter on conducting research in play therapy. Appendixes contain useful worksheets, checklists, and resources that can be easily integrated into practice. *CSCL has in the past 15 years (and often in conjunction with Springer) grown into a thriving and active community. Yet, lacking is a comprehensive CSCL handbook that displays the range of research being done in this area. The handbook will also serve as a ready reference for foundational concepts, methods, and approaches in the field. The chapters are written in such a way that each of them can be used in a stand-alone fashion while also serving as introductory readings in relevant study courses or in teacher education. While some CSCL-relevant topics are addressed in the International Handbook of the Learning Sciences and the International Handbook of Collaborative Learning, these books do not aim to present an integrated and comprehensive view of CSCL. The International Handbook of Computer-Supported Collaborative Learning covers all relevant topics in CSCL, particularly recent developments in the field, such as the rise of computational approaches and learning analytics.*

*Current therapeutic practice is grounded in traditional theories of psychotherapy, such as the theories that underlie cognitive-behavioural, psychodynamic and*

*person-centred practice. But none of these approaches has been proven to be more effective than any other, leaving the therapist with an ethical and professional dilemma: how do you advocate and practise one theory with your clients, when a completely different theoretical approach is being successfully practised down the road? In this book Campbell Purton argues that psychotherapy and counselling theories fail to provide adequate justification for their practice. Part 1 highlights the weaknesses and dangers that underlie traditional counselling theories and their derivatives, including psychodynamic, cognitive behavioural, existential and neuroscience approaches. Having unpicked these theories, Part 2 goes on to develop an exciting new way of thinking about therapy that does not rely on theory - one that can be likened to a 'common sense' approach to therapeutic practice. This book poses important questions and offers unique insight for anyone studying or practising in the field of counselling and psychotherapy.*
