At last, a clinician's guidebook to prescription dilemmas. Psychotropic medications prescribed to treat mental disorders have become increasingly commonplace over the past half century, but the decision-making process for doing so continues to lack real clarity. Clinicians and patients alike face new challenges and questions thanks to the increasing availability of these drugs: When is the right time to prescribe something? Can I predict which drug will help this individual? When do I consider changing a medication? How do I assess whether a drug's side effects make it worthwhile or not? The response to these challenging questions is not to stop medicating altogether. Psychotropic medications are useful clinical tools. But now more than ever we must consider what it means to medicate judiciously. It is time to slow down, pause, maybe even back up a bit, and reconsider how and why various drugs should be prescribed and monitored for success. The goal of this book is to encourage prudent, informed, and appropriate use of psychotropic medications—to encourage use that is respectful and aware of the strengths and limitations of these drugs. By presenting some fundamental principles of pharmacology as they apply to the clinical treatment of patients, and by offering practical, big-picture prescribing recommendations, Psychopharmacology Problem Solving helps to unravel an increasingly complex decision-making process. The first part of the book offers guidelines to keep in mind when working toward making informed choices regarding drug therapy. The second part of the book offers select examples of behavioral problems and psychological disorders—including addiction, obesity, schizophrenia, depression, anxiety, and ADHD—to illustrate how the principles or recommendations presented in Part I actually play out. The book concludes by considering the persistent problems and challenges that we face in our current and future use of psychotropic medications. Taking a hard look at the extraordinary and increasing trust clinicians, patients, and families of patients place in drug therapy for mental illness, this book gives readers an evidence-based anchor to help them make the right decisions.

"This is a curriculum based on the 2022 Edition of NFPA 1033: Standard for Professional Qualifications for Fire Investigators. This is a major overhaul from the previous edition which was organized to follow the structure of NFPA 921: Guide for Fire and Explosion Investigations. With a foreword by last edition editor, Professor Sheila Payne, Lancaster University, UK. “I welcome this third edition of Palliative Care Nursing and congratulations to the new team who have provided us with a dynamic and innovative development of a core text for palliative nursing practice. As the largest workforce in palliative care, and given the changing face of clinical practice for nurses, including increased educational opportunity and expanding roles and responsibilities, this book is timely in its focus on critical issues which frame and scope the reality of palliative care and the nursing contribution to that discipline. The learning exercises, in particular, offer tools for educators and clinicians to reflect on practice and understand new ways of knowing in palliative care. It will be an excellent resource for nursing, both in the UK and Ireland and to the wider international audience, having drawn on the breadth of global nursing expertise to bring this book together. Philip Larkin, Professor of Clinical Nursing (Palliative Care), University College Dublin and Our Lady's Hospice and Care Services, Dublin, Ireland; President, European Association for Palliative Care “This is a book of substance that captures the current status of palliative nursing, including the values and research evidence that underpin it. The changing nature of palliative nursing as an evidence-based specialism is balanced with practical skills and insights from experts, and also considers the needs of those working with, or concerned about, the dying person's well-being. It covers a range of challenging issues as well as drawing on the wisdom of those who actually undertake this work on a daily basis. I hope that students and practitioners from all disciplines will find this a useful resource to understand the art and craft of good palliative nursing.” Professor Daniel Kelly, Fellow of the Royal College of Nursing and Royal College of Nursing Chair of Nursing Research, Cardiff University, UK
