Whether within or beyond the confines of the state, digitalization continues to transform politics, society and democracy. Information and Communication Technologies (ICTs) have already considerably affected political systems and structures, and no doubt they will do so in the future. Adopting an international and comparative perspective, Digital Democracy in a Globalized World examines the impact of digitalization on democratic political life. It offers theoretical analyses as well as case studies to help readers appreciate

The book entitled "The internationalization of e-commerce: a case study of the Alibaba group" has been written by the Brazilian researchers Matheus Felipe Pereira de Souza and Elói Martins Senhoras. It is the 31st didactic book of the "Communication & Public Policy Collection" which aims to stimulate the development of textbooks fulfilling bibliographic gaps. This book brings into light 3 main discussions: International Business as a scientific field of study the internationalization process of e-commerce and, a case study of the Group.

The Routledge International Handbook of Green Criminology was the first comprehensive and international anthology dedicated to green criminology. It presented green criminology to an international audience, described the state of the field, offered a description of a range of environmental issues of regional and global importance, and argued for continued criminological attention to environmental crimes and harms, setting an agenda for further study. In the six years since its publication, the field has continued to grow and thrive. The revised and expanded second edition of the Handbook reflects new methodological orientations, new locations of study such as Asia, Canada and South America, and new responses to environmental harms. While a number of the original chapters have been revised, the second edition offers a range of fresh chapters covering new and emerging areas of study, such as: conservation criminology, eco-feminism, environmental victimology, fracking, migration and eco-rights, and e-waste. This handbook continues to define and capture the field of green criminology and is essential reading for students and researchers engaged in green crime and environmental harm.

Based on a major research project (the InterActive Project), this book explores and illustrates how digital technologies can transform learning across the curriculum. Using a wide range of educational settings - primary, secondary, school and home - it will help practitioners think about, plan and execute effective learning in their classrooms and beyond. It will show teachers how they can 'harness technology for the future' by covering important topics such as: personalised learning using ICT for pupils with special needs personal use of ICT and home-school links designing 'digital' classrooms. By weaving 'evidence based practice' into each chapter, the book will provide extensive guidance, practical advice and insights into working in the 'digital classroom' for all primary and secondary school teachers.

Provides research on e-government and its implications within the global context. Covers topics such as digital government, electronic justice,

government-to-government, information policy, and cyber-infrastructure research and methodologies.

Advances In Digital Government presents a collection of in-depth articles that addresses a representative cross-section of the matrix of issues involved in implementing digital government systems. These articles constitute a survey of both the technical and policy dimensions related to the design, planning and deployment of digital government systems. The research and development projects within the technical dimension represent a wide range of governmental functions, including the provisioning of health and human services, management of energy information, multi-agency integration, and criminal justice applications. The technical issues dealt with in these projects include database and ontology integration, distributed architectures, scalability, and security and privacy. The human factors research emphasizes compliance with access standards for the disabled and the policy articles contain both conceptual models for developing digital government systems as well as real management experiences and results in deploying them. Advances In Digital Government presents digital government issues from the perspectives of different communities and societies. This geographic and social diversity illuminates a unique array of policy and social perspectives, exposing practitioners to new and useful ways of thinking about digital government.

These proceedings represent the work of authors at the 13th European Conference on e-Government (ECEG 2013). The Conference this year is hosted by the University of Insubria in Como, Italy. The Conference Chair is Professor Walter Castelnovo and the Programme Chair is Professor Elena Ferrari, both are from the Department of Theoretical and Applied Sciences at the University of Insubria. The opening keynote address is given by Dr Gianluca Misuraca from the European Commission, Joint Research Centre, Institute for Prospective Technological Studies, Seville, Spain and Gianluca is addressing the topic "eGovernment: Past, Present & Future: A policy-research perspective for renewing governance in the digital age." The second day of the conference is opened by Dr Antonio Cordella from the London School of Economics, London, UK, who will talk about "Public value creation: the new challenge for e-government policies." ECEG brings together, researchers, Government officials and practitioners in the area of e-Government from around the world. Participants are able to share their research findings and explore the latest developments and trends in

the field which can then be disseminated to the wider community. With an initial submission of 153 abstracts, after the double blind, peer review process there are papers published in these Conference Proceedings from 40 countries including Australia, Austria, Belgium, Brazil, Canada, China, Costa Rica, Croatia, Denmark, Egypt, Germany, Greece, India, Iran, Iraq, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malaysia, Netherlands, New Zealand, Norway, Pakistan, Poland, Romania, Russia, Saudi Arabia, Serbia, Slovenia, South Africa, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, UK and USA. This will ensure a very interesting two days.

Today, the online sphere is no longer just an information repository or a place to search for resources. It has become instead a place supporting both intentional and non-intentional learning. Intentional, formal learning, often leads to certification, whereas informal learning is unstructured and takes place as part of daily work-related or leisure activities. Cases on Formal and Informal E-Learning Environments: Opportunities and Practices brings together cases outlining the practical aspect of formal, non-formal, and informal online learning. This book introduces conceptual aspects of these types of learning, knowledge-base, new learning paradigms, policy implications, evaluation and concerns, design, and development of online learning.

Asia is the world's largest e-commerce marketplace and continues to grow rapidly. Some countries lead. Others need to catch up. An efficient e-commerce marketplace requires information and communication technology infrastructure—including internet access, speed, and affordability—along with logistics, an effective legal and institutional framework, and social acceptance and awareness. This report reviews the opportunities and challenges in developing business-to-consumer e-commerce in the region. It also examines how Fourth Industrial Revolution technologies—blockchains, the internet of things, machine learning, artificial intelligence, and 5G wireless networks, among others—will transform the industry and unlock its dynamic potential. It also offers policy recommendations to help lower barriers to e-commerce development.

Throughout the book, theoretical foundations necessary for understanding Electronic Commerce (EC) are presented, ranging from consumer behavior to the economic theory of competition. Furthermore, this book presents the most current topics relating to EC as described by a diversified team of experts in a variety of fields, including a senior vice president of an e-commerce-related company. The authors provide website resources, numerous exercises, and extensive references to supplement the theoretical presentations. At the end of each chapter, a list of online resources with links to the websites is also provided. Additionally, extensive, vivid examples from large corporations, small businesses from different industries, and services, governments, and nonprofit agencies from all over the world make concepts come alive in Electronic Commerce. These examples, which were collected by both academicians and practitioners, show the reader the capabilities of EC, its cost and justification, and the innovative ways corporations are using EC in their operations. In this edition (previous editions published by Pearson/Prentice Hall), the authors bring forth the latest trends in e-commerce, including social businesses, social networking, social collaboration, innovations, and mobility.

E-Government and Information Technology Management is an essential textbook for graduate and undergraduate programs across the world that are taking steps to incorporate courses on e-government/IT as they prepare their students to join the public sector workforce. The book also serves as a comprehensive guide for the growing body of researchers and practitioners in e-government. The text is comprised of 12 chapters from e-government experts, all written in a clear writing style that balances theory and practice. Each chapter provides background information, critical resources, and emerging trends. Along with questions for class discussion, each chapter includes cases to demonstrate the importance of these areas to practitioners, researchers, and students of technology management and public affairs administration.

Health Professionals' Education in the Age of Clinical Information Systems, Mobile Computing and Social Networks

Health Professionals' Education in the Age of Clinical Information Systems, Mobile Computing and Social Networks addresses the challenges posed by information and communication technology to health professionals' education, and the lessons learned from field experiences and research. This book is divided in three parts: "the changing landscape of information and communication technology in health care", in which it discusses how information and communication technology is transforming health care and the implications of these changes for health professions education; "experiences from the field", with real-life examples of health professionals' education in and for the digital era; and "evaluation of students and programs", addressing the use of technology to assess learners as well as the complexity of evaluating programs to enhance competence in an information technology-rich health care world. Written by leading researchers from different parts of the world, the book is a valuable source for educators and professionals who are active or wish to be part of the health informatics field. Brings an in-depth understanding and background on the challenges for education of the health professions brought by information and communication technology. Provides real-life examples on how technology is used in healthcare and how it can be used in education. Presents valuable information in a visually appealing format with tables and figures.

commerce technologies, namely e-commerce. This acceleration in the acceptance of e-commerce not only changes the face of business and retail, but also has introduced new, adaptive business models. The experience of consumers in online shopping and the popularity of the digital marketplace have changed the way businesses must meet the needs of consumers. To stay relevant, businesses must develop new techniques and strategies to remain competitive in a changing commercial atmosphere. The way in which e-commerce is being implemented, the business models that have been developed, and the applications including the benefits and challenges to e-commerce must be discussed to understand modern business. The *Research Anthology on E-Commerce Adoption, Models, and Applications for Modern Business* discusses the best practices, latest strategies, and newest methods for implementing and using e-commerce in modern businesses. This includes not only a view of how business models have changed and what business models have emerged, but also provides a focus on how consumers have changed in terms of their needs, their online behavior, and their use of e-commerce services. Topics including e-business, e-services, mobile commerce, usability models, website development, brand management and marketing, and online shopping will be explored in detail. This book is ideally intended for business managers, e-commerce managers, marketers, advertisers, brand managers, executives, IT consultants, practitioners, researchers, academicians, and students interested in how e-commerce is impacting modern business models.

E-Government is a hot topic. The integration of Information and Communication Technologies into public service delivery worldwide offers a number of promising opportunities. This text refers in particular to the benefits derived from ubiquitous access to and delivery of government services to citizens, business partners and employees. This book analyses the fundamental technical and non-technical concepts that are essential for

successful implementation of e-Government in diverse environments, especially in developing countries. This book is an indispensable resource for both e-Government practitioners and researchers in that it brings to the fore scholarly scrutiny, scientific debate, and best practice in e-Government. The author has a background in computer and information science and accentuates the multi-disciplinary nature of the issues surrounding e-Government.

With the increasing reliance on digital means to transact goods that are retail and communication based, e-services continue to develop as key applications for business, finance, industry and innovation. **Electronic Services: Concepts, Methodologies, Tools and Applications** is an all-inclusive research collection covering the latest studies on the consumption, delivery and availability of e-services. This multi-volume book contains over 100 articles, making it an essential reference for the evolving e-services discipline. **Embrace the Case Interview** walks you through each step on the path to your dream consulting job as described by a former management consultant who conducted over 100 interviews for a top-tier firm. First, we cover how to get the interview including how to be memorable when speaking with firms prior to the interview and how to write a killer resume and cover letter. Second, we cover the behavioral part of the interview. Often overlooked, the behavioral part of the interview covers your personal experiences and is often just as valuable as the case interview. We discuss the traits interviewers are looking for and how to answer their questions in a structured way. Third, we take an in-depth look at the case interview itself. Unlike books that focus on segmenting cases and applying frameworks, you will learn a single, flexible structure that you will apply to any case with deadly effectiveness. In addition to structuring the case, you will learn approaches for the cases' other parts including qualitative questions, quantitative problems, exhibit analysis, and synthesis. **Embrace the Case Interview** places a strong emphasis on the quality of your learning rather than just doing hundreds of cases. As such, each example case contains an in-depth discussion of the text book answer to help you improve. For more information, please visit embracethecaseinterview.com. Enjoy the book and best of luck in your upcoming interviews!

As physical collections go digital, the organizational procedures, budgets, and usage patterns of libraries must evolve to meet this change by identifying the various issues that are essential in understanding the management of e-resources. **Progressive Trends in Electronic Resource Management in Libraries** provides relevant theoretical and practical details from an international perspective on the current e-resources landscape. Through a detailed discussion of the specific aspects of e-resources management, this book is a useful source for library science faculty and students, academic librarians, research scholars, and IT professionals aiming to improve their understanding of the theoretical details, history, selection, acquisition, fair use and management of e-resources.

The digital divide, caused by several factors such as

poverty and slow communication technologies, has offset the progression of many developing countries. However, with rapid changes in technology, a better collaboration among communities and governance based on the latest research in ICT and technology has begun to emerge. Employing Recent Technologies for Improved Digital Governance is an essential reference source that provides research on recent advances in the development, application, and impact of technologies for the initiative of digital governance. The book has a dual objective with the first objective being to encourage more research in deploying recent trends in the internet for deploying a collaborative digital governance. The second objective is to explore new possibilities using internet of things (IoT) and cloud/fog-based solutions for creating a collaboration between the governance and IT infrastructure. Featuring research on topics such as intelligent systems, social engineering, and cybersecurity, this book is ideally designed for policymakers, government officials, ICT specialists, researchers, academicians, industry professionals, and students.

Expand your knowledge of problems and possibilities with e-material acquisitions around the world to aid in making your own decisions The demand for electronic material in academic libraries is growing and shows no sign of abating.

Collection Development Issues in the Online Environment addresses key issues in electronic materials development and presents cutting-edge practices from academic libraries around the world. Leading authorities reveal insights on both common and special concerns that every library administrator can use in making decisions about their own collections. The text also presents real-life case studies illustrating approaches that can be modified for effective planning of your own library acquisitions. The strategies are practical, the information clear and helpful, all of it contained in a single useful volume that every information science professional or academic can use. Collection Development Issues in the Online Environment is separated into three sections. The first section tackles issues common to most academic libraries such as electronic journal delivery and budgeting. The second section addresses special library digital issues such as the preservation and dissemination of unique types of information such as annual reports. The final section delves into the future of library

electronic acquisitions and the coming challenges. This text is carefully referenced and includes tables and figures to enhance understanding of the subjects. Collection Development Issues in the Online Environment topics include: virtual learning environments (VLE) problems of pricing and access with individually ordered or packaged electronic journals budgeting issues in electronic resources management of electronic-only versions of journals electronic vs. paper serials—including selection criteria of each copyright law—and its impact on electronic acquisitions subscriptions to databases and the variations in depth and quality of indexing the challenges in creation of an electronic collection of historical annual reports costs and delivery options for unbundled and integrated media materials systematic incentives to implement archiving of peer-reviewed papers produced by faculty PDA serials issues

Collection Development Issues in the Online Environment is helpful, horizon-expanding information for librarians, library administrators, archivists, publishers, and library and information science educators and students. This book presents new research results on the challenges of local politics in different European countries, including Germany, the Netherlands, the Nordic countries and Switzerland, together with theoretical considerations on the further development and strengthening of local self-government. It focuses on analyses of the most recent developments in local democracy and administration. The integration of recent technological advances into modern business processes has allowed for greater efficiency and productivity. However, while such improvements are immensely beneficial, the modeling and coordination of these activities offers a unique set of challenges that must be addressed.

Automated Enterprise Systems for Maximizing Business Performance is a pivotal reference source for the latest scholarly research on the modeling and application of automated business systems. Featuring extensive coverage on a variety of topics relating to the design, implementation, and current developments of such systems, this book is an essential reference source for information system practitioners, business managers, and advanced-level students seeking the latest research on achievements in this field. This publication features timely, research-based chapters within the context of business systems including,

but not limited to, enterprise security, mobile technology, and techniques for the development of system models.

Written by a leading expert in the utility field, this practical resource guides professionals in the evolution of the Smart Grid and offers insight into distribution automation, storage, and microgrid. This book highlights the journey to a transformed electric utility, provides solid examples, and includes real-world case studies. Readers find guidance on new energy storage solutions and electric value chain disruptors. Professionals learn how to overcome challenges related to integrating supply and demand diversity. The book highlights how new technologies impact the day-to-day operations of a utility and how these technologies can transform the normal functioning of the utility. Discussions are provided about how a transformed utility can be a springboard to a smart city. Professionals will be able to apply the strategies of technologies in this resource to guide them to success in the field. This book defines the roadmap to the utility of the future and provides a vision for how utilities can thrive in their new environment.

The EGOV Conference Series intends to assess the state of the art in e-Government and to provide guidance for research and development in this fast-moving field. The annual conferences bring together leading research experts and professionals from all over the globe. Thus, EGOV 2003 in Prague built on the achievements of the 1st EGOV Conference (Aix-en-Provence, 2002), which provided an illustrative overview of e-Government activities. This year the interest even increased: nearly 100 contributions, and authors coming from 34 countries. In this way EGOV Conference 2003 was a reunion for professionals from all over the globe. EGOV 2003 brought some changes in the outline and structure of the conference. In line with the broadening of the field and a growing number of missions it became necessary to decentralize the reviewing process. So reviewing was done via stream chairs who deserve high praise for their dedicated work. In addition, a workshop part was included to cover some subjects of emerging significance, such as dissemination, networking, and regional developments. Further, a subtitle of the conference was chosen that would mirror the expansion of e-Government to e-Governance.

Consequently, in this year's conference governance, democratic deliberation and legal issues occupied a growing share. Last, but not least, GIS was incorporated as a topic due to the increasing importance of geographical information systems for planning and operations.

"This book sheds light on how e-government technologies are shaping today's knowledge society from the ground roots of the citizen experience to the supreme level of policy and decision making"--Provided by publisher.

E-Government describes the utilization of technologies to improve the lives of citizens and business organizations while facilitating the operation of the government. With the rise of new technologies, governments need to consider implementing Web 2.0 and mobile technologies as a way to offer relevant e-services to citizens so that they may fully participate in governmental affairs. Emerging Mobile and Web 2.0 Technologies for Connected E-Government highlights the latest technologies and how they can be implemented by the government and effectively used by citizens. This book aims to be an inclusive reference source for researchers, practitioners, students, and managers interested in the application of recent technological innovations to develop a more effective e-government system.

Unter dem Begriff „kulturelle Musikwissenschaft“ versammeln sich seit über einem halben Jahrhundert eine Reihe musikwissenschaftlicher Visionen, die alle ein gemeinsames Ziel verfolgen: die unermüdliche Suche nach neuen Wegen für ein besseres Musikverständnis. Jüngste Ansätze kultureller Musikwissenschaft begreifen musikalische Aktivitäten als kulturelle Praktiken und versuchen so über die systematische Analyse verbaler und musikalischer Diskurse hinaus zu gelangen. Das Interesse gilt vorrangig der Erforschung unserer intellektuellen Möglichkeiten, die es uns erlauben, uns in physischer, sozialer oder diskursiver Hinsicht die Welt mithilfe von Musik zu erschließen. Daraus ergeben sich aktuelle Untersuchungsschwerpunkte und kritische Denkansätze der kulturellen Musikwissenschaft, deren Geschichte, theoretischen Rahmen und zentrale Konzepte die Autoren des vorliegenden Bandes am Beispiel spezifischer musikalischer Praktiken diskutieren. Dabei wird deutlich, dass es der kulturellen Musikwissenschaft vielmehr darum geht, Fragen aufzuwerfen und Perspektiven zu eröffnen, als Antworten und Fakten festzulegen. Sie lehnt es ab, sich mit Erkenntnissen zufrieden zu geben, entscheidend ist ein fortgesetztes Streben nach neuen Wegen und Annäherungen an die Musik: eine produktive intellektuelle Rastlosigkeit. Der vorliegende Band enthält Beiträge von Birgit Abels, Charissa Granger, Lawrence Kramer, John Richardson und Eva-Maria van Straaten. The term “cultural musicology” has been around for more than half a century, and it has harbored a number of musicological visions which share one fundamental goal: broadly speaking, aspiring to better understand music and remaining eager to find ever-new ways to do so. Recent cultural musicology seeks to understand musical activities as cultural practices in a manner that aims to reach beyond the systematic analysis of verbal and musical – musicked – discourse and of the conditions in which it is enacted. Its primary interest is in exploring our

primarily intellectual possibilities to comprise of musicking as epistemologies through which humans musically relate to, and make sense of, their surrounding world in a physical, social, and discursive sense. From this, a few key areas of inquiry emerge, and this edited volume presents a first-of-its-kind exploration of current critical thinking and research in and about cultural musicology. In exploring specific musical practices, the contributors discuss the (hi)stories, theoretical framework, and central concepts of current cultural musicology. In-between the lines, it becomes clear that cultural musicology is about looking for questions and perspectives rather than answers and presumed facts, about refusing to be content with anything that may be found along the way, and about remaining eager to discover new approaches and ways to think about music: about intellectual restlessness, and embracing it. This edited volume includes contributions from Birgit Abels, Charissa Granger, Lawrence Kramer, John Richardson, and Eva-Maria van Straaten.
