

Engine Overhaul Report

Seven Pratt and Whitney Aircraft (PWA) JT8D-7A turbofan engines were tested at Kennedy International Airport, New York, to evaluate exhaust emissions characteristics and data variability after overhaul. The measured data show that the engines tested did not meet the Environmental Protection Agency (EPA) emission standards. A comparison of the measured data, obtained from the seven overhauled engines evaluated under this program, with new engine data obtained from PWA show that there is a great deal of similarity between the two sets of data. Differences shown in this report between new engine and overhauled engine data are due to the quantity of the engines sampled; the new engine data represent a larger sample size. Satisfactory data can be measured by using the test procedures, instrumentation, and equipment defined in this report. (Author).

If you have a small-block Ford, then you need this book! This detailed guide covers the step-by-step rebuilding process of the popular small-block Ford engine. Parts inspection, diagnosis, reconditioning, and assembly are outlined in simple text. Hundreds of photos, charts, and diagrams visually walk you through the entire rebuild. You'll be able to completely disassemble your engine, recondition the block and cylinder heads, then reassemble and install the engine in your vehicle. There's even a section on how to perform tune-ups to maximize performance and economy. Sections on parts interchanging will help you identify all parts and determine which ones can and can't be swapped. This is truly a "hands-on" book. Don't put off your project any longer. Start rebuilding your small-block Ford today!

Aircraft engine repair costs labeled as actual on three reports were investigated. From an initial survey it appeared that these actual repair costs should be identical for the same model, design, and series engine when in fact they were not. By examining the procedures used to generate each report and certain facts concerning each report, it was found that the differences were explainable and justifiable. Each reported actual cost did not conform to the accepted accounting definition and did not accurately describe the type of cost involved. A recommendation was made to change the terminology to preclude misunderstanding and confusion arising from a very complex cost system. (Author).

A survey of gas path component turbine engine failures for a cross-section of current turbine engines in the U.S. Air Force inventory is presented in this report. Detailed descriptions of failure modes extracted from engine overhaul facility records are provided along with assessments of the utility of particle emissions in the prediction of these gas path failures or potential failures. SO YOU WANT TO BE A FERRY PILOT is made up of nineteen true short stories about ferrying airplanes from one part of the world to another. Each flight has something about it that wasn't planned. Unexpected heart stopping engine failures, weather that went from CAVU (Clear and Visibility Unlimited) to Oh MY God!/, interception by armed foreign fighters, arrest by third world police or anything that old Mister Murphy can throw your face. I had several pilot friends read the manuscript, here are some of their comments. "Ferry pilots are nuts, everybody knows that." Captain Cal Harman, 20 years with Continental. "These stories are unbelievable, I thought flying combat missions was dangerous." Captain Curt Briggs, shot down in Vietnam while flying an F-4 Phantom, rescued after spending more than 24 hours hiding from the North Vietnamese. "When we were cell mates in Hanoi I suspected that Spike was a little crazy, suspicions confirmed." Lieutenant Commander Larry Friese, USN Retired. POW in Vietnam 51/2 years.
