Inside Immigration Law analyses the practice of implementing immigration law, examining the different political and organisational forces that influence the process. Based on unparalleled academic access to the German migration management system, this book provides new insights into the 'black box' of regulating immigration, revealing how the application of immigration law to individual cases can be chaotic, improvised and sometimes arbitrary, and either informed or distorted by the complex, politically laden and changeable nature of both German and EU immigration laws. Drawing on extensive empirical material, including participant observation, interviews and analyses of public as well as confidential documents in German immigration offices, Inside Immigration Law unveils the complex practices of decision-making and work organisation in a politically contested environment. A comparative, critical evaluation of the work of offices that examines the discretion and client interactions of bureaucrats, the management of legal knowledge and symbolism and the relationships between immigration offices and external political forces, this book will be of interest to sociologists, legal scholars and political scientists working in the areas of migration, integration and the study of work and organisations.

Featuring a timely presentation of total survey error (TSE), this edited volume introduces valuable tools for understanding and improving survey data quality in the context of evolving large-scale data sets This book provides an overview of the TSE framework and current TSE research as related to survey design, data collection, estimation, and analysis. It recognizes that survey data affects many public policy and business decisions and thus focuses on the framework for understanding and improving survey data quality. The book also addresses issues with data quality in official statistics and in social, opinion, and market research as these fields continue to evolve, leading to larger and messier data sets. This perspective challenges survey organizations to find ways to collect and process data more efficiently without sacrificing quality. The volume consists of the most up-to-date research and reporting from over 70 contributors representing the best academics and researchers from a range of fields. The chapters are broken out into five main sections: The Concept of TSE and the TSE Paradigm, Implications for Survey Design, Data Collection and Data Processing Applications, Evaluation and Improvement, and Estimation and Analysis. Each chapter introduces and examines multiple error sources, such as sampling error, measurement error, and nonresponse error, which often offer the greatest risks to data quality, while also encouraging readers not to lose sight of the less commonly studied error sources, such as coverage error, processing error, and specification error. The book also notes the relationships between errors and the ways in which efforts to reduce one type can increase another, resulting in an estimate with larger total error. This book : Features various error sources, and the complex relationships between them, in 25 high-quality chapters on the most up-to-date research in the field of TSE • Provides comprehensive reviews of the literature on error sources as well as data collection approaches and estimation methods to reduce their effects • Presents examples of recent international events that demonstrate the effects of data error, the importance of survey data quality, and the real-world issues that arise from these errors • Spans the four pillars of the total survey error paradigm (design, data collection, evaluation and analysis) to address key data quality issues in official statistics and survey research Total Survey Error in Practice is a reference for survey researchers and data scientists in research areas that include social science, public opinion, public policy, and business. It can also be used as a textbook or supplementary material for a graduate-level course in survey research methods.

Build real-world, industry-strength data storage solutions with time-tested design methodologies using Cassandra About This Book Explore design patterns which co-exist with legacy data stores, migration from RDBMS, and caching technologies with Cassandra Learn about design patterns and use Cassandra to provide consistency, availability, and partition tolerance temporal data for analytical purposes Who This Book Is For This book is intended for big data developers who are familiar with the basics of Cassandra and wish to understand and utilize Cassandra design patterns to develop real-world big data solutions. Prior knowledge of RDBMS solutions is assumed. What You Will Learn Enable Cassandra to co-exist with RDBMS various design patterns to build effective and robust storage solutions Migrate from RDBMS-based data stores and caching solutions to Cassandra Understand the behaviour of Cassandra when trying to balance the needs of consistency, availability, and partition tolerance Deal with time stamps related to data effectively See how Cassandra can be used in analytic This book in real-world use cases In Detail There are many NoSQL data stores used by big data applications. Cassandra is one of the most widely used NoSQL data stores that is frequently used by a huge number of heavy duty Internet-scale applications. Unlike the RDBMS world, the NoSQL landscape is very diverse and there is no one way to model data stores. This commonly seen data store design problems. Cassandra addresses such common problems simply. If you are new to Cassandra but well-versed in RDBMS modeling and design, then it is natural to model data in the same way in Cassandra, resulting in poorly performing applications and losing the real purpose of Cassandra. If you want to learn to make the most of Ca with strategies to integrate Cassandra with other legacy data stores and progresses to the ways in which a migration from RDBMS to Cassandra can be accomplished. The journey continues with ideas to migrate data from cache solutions to Cassandra. With this, the stage is set and the book moves on to some of the most commonly seen problems in application partition tolerance guarantees. Cassandra is exceptionally good at dealing with temporal data and patterns such as the time-series pattern and log pattern, which are covered next. Many NoSQL data stores fail miserably when a huge amount of data is read for analytical purposes, but Cassandra is different in this regard. Keeping analytical needs in mind, you’ll walk through. No theoretical discussions are complete without a good set of use cases to which the knowledge gained can be applied, so the book concludes with a set of use cases you can apply the patterns you’ve learned. 2nd edition (colour) Probably the biggest – and potentially most risky – undertaking for any Human Resources or payroll professional is the selection of new software. Additionally, it is almost inevitable that they will be involved with it at some point in their career. The litany of failures in this area has been alarmingly high, from selecting the wrong systems in the first implementation: all of this against a heavy cost to the organisation in both financial terms and lost opportunities. Denis Barnard is a consultant specialising in the selection of HR & payroll systems, and other HRIS, and is acknowledged as one of the UK’s leading experts in the field. Drawing on many years of experience, he gives crucial insight to the actions needed for a project, as well as a step-by-step blueprint of how the right result can be achieved. Written in a style aimed to demystify the relatively unknown, this is a “must have” for the practitioner’s bookshelf.

The intelligence of a city is the capacity to learn: to learn the past, its history and the culture of its territory. It analyzes the formation of Big Data, their algorithmic processing and the societal changes which result (social monitoring and control in particular). Through critical views, it equally presents the various ways in which technology participates in relations of power and domination, and contributes to possible emancipatory practices. Covers problem formulation, planning, questionnaire design, sampling, the conduct of interviews, statistical analysis and the presentation of the results.

This volume examines a wide variety of the ways in which the fantastic has impacted upon contemporary women's fiction. Some of the issues addressed include: the importance of the cyborg and the spectre to critical and fictional discourses of gender; the interface between the grotesque and contemporary readings of feminist utopianism; the growing similarity between late twentieth-century gothicism and the magical real. The study is based upon the work of fifteen writers and includes novels by Allende, Atwood, Carter, Head, Morrison, Weldon, Winterson and Wittig.

On 9 June 2008, Mrs Caroline Spelman, MP for Meriden, asked the Parliamentary Commissioner for Standards to investigate the circumstances of the employment of a member of her staff from 1997 to 1999, following press reports that parliamentary allowances may have been misused. The allegation is that Mrs Spelman subsidised the cost of nannying services out of her parliamentary allowances and that her administration assistant (Mrs Haynes) did not undertake secretarial or administrative duties to the extent for which she was paid. The Commissioner conducted a most thorough investigation and has concluded that the arrangements entered into by Mrs Spelman with Mrs Haynes had the unintended effect of misapplying some of Mrs Spelman's parliamentary allowances for non-parliamentary purposes. In effect there was an element of cross-subsidy. The Commissioner has reached this conclusion on the basis of the high standard of proof adopted by him for this inquiry, i.e. that it is significantly more likely to be true than not to be true. The Committee agrees with the Commissioner's conclusion that for two years from June 1997 Mrs Spelman paid Mrs Haynes from her parliamentary allowances a salary as her part-time administration assistant that enabled Mrs Haynes to work also as her nanny without additional or separate financial reward. This had the effect of misapplying part of Mrs Spelman's parliamentary allowances. This breach, which occurred at a time when both the Rules and expectations were less stringent than they are now, was unintentional. Mrs Spelman has accepted the Commissioner's findings and has agreed to pay back the misapplied sums.

Google generates enormous profits in the UK. But despite an \$18 billion turnover between 2006 and 2011 it paid the equivalent of just \$16 million in taxes to the UK government. Google brazenly argues that its tax arrangements in the UK are defensible and lawful. It claimed that its advertising sales take place in Ireland, not in the UK. This argument is deeply unconvincing and has been undermined by information from whistleblowers, including ex-employees of Google. Google also conceded that its engineers in the UK are contributing to product development. The company's highly contrived tax arrangement has no purpose other than to enable the company to avoid UK corporation tax. Google's reputation has been damaged by these revelations of aggressive tax avoidance. That damage will not be repaired until the company arranges to pay its fair share of tax in the country where it earns the profits from the business it conducts. Confidence in HMRC has also been weakened. The tax avoidance activities of multinational companies as a whole are illustrative of a much wider problem. The Government clearly needs to act to strengthen HMRC and to simplify the tax code so that there are fewer loopholes. The Government has declared that it will use its presidency of the G8 to promote the tackling of aggressive tax avoidance. It must be recognized that the public mood on tax avoidance has changed and that the time has come for big UK accountancy firms to advise their clients responsibly

'The perfect antidote to 2020' Huffington Post 'A must-read if you like funny things' Greg James 'I had no idea Pat Sharp's life story would be so hilarious and I strongly suspect neither did he' Nish Kumar Pat Sharp is a man out of time. For those of a certain generation, he is an iconic figure synonymous with good fun, great hair and excess gunge. For others, he's just that bloke with a mullet. Fame is a fickle beast and, since the cancellation of Fun House in 1999 ('just ten years into its run, when it was finally finding its feet'), Pat has become a reclusive figure, only emerging from his splendid isolation to pop up on things like I'm A Celebrity: Get Me Out Of Here, Never Mind the Buzzcocks and Come Dine with Me. Until now. With time on his hands and now reliant on a fully memory, Pat has expertly blended fact and . . . fiction: revealing all about his adventures with David Hasselhoff at the Berlin Wall in 1989; how he broke up a fight between Damon Albarn and Liam Gallagher at a house party; the time he suggested Geri's dress be a Union Jack; and much more. A definitive work (based on very little fact) that anatomises the cultural trends of the '80s and '90s. Re-run the Fun is just the kind of soft-biography we need in these turbulent times. Finally, the Great British public can learn what life is like just about in sight of the top - the highs, the lows and the hair tips. It's easy to forget, as I had, that Pat Sharp is so much more than an iconic haircut and a helter-skelter - and this well overdue book goes into hilarious, largely-fabricated detail about Pat's critical role in shaping our world today! Rick Edwards 'No previous knowledge of Pat Sharp is required' Paul Sinha
