Health care expenditures in the U.S. totaled \$1.3 trillion in the year 2000, and spending could reach \$2.8 trillion, or 17% of the nation's gross domestic product (GDP), by 2011, up from 13.2% of GDP in 2000.<sup>1</sup> In addition, the greatest stress will come as baby boomers increasingly join the ranks of the elderly after 2011. From a resource perspective, health care is one of the largest U.S. industries, employing approximately 14 million people. The U.S. health care industry promotes national security by enhancing the quality of human life through use of technology, improved nutrition, disease containment/reduction, education, and research and development. Also, in the aftermath of the 2001 terrorist strikes, there is increased focus on public health monitoring and consequence management across the health care spectrum.

The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).*

insurance program, covers more than 47 million Americans. Although it is a national program, it adjusts payments to hospitals and health care practitioners according to the geographic location in which they provide service, acknowledging that the cost of doing business varies around the country. Under the adjustment systems, payments in high-cost areas are increased relative to the national average, and payments in low-cost areas are reduced. In July 2010, the Department of Health and Human Services, which oversees Medicare, commissioned the IOM to conduct a two-part study to recommend corrections of inaccuracies and inequities in geographic adjustments to Medicare payments. The first report examined the data sources and methods used to adjust payments, and recommended a number of changes. *Geographic Adjustment in Medicare Payment - Phase II: Implications for Access, Quality, and Efficiency* applies the first report's recommendations in order to determine their potential effect on Medicare payments to hospitals and clinical practitioners. This report also offers recommendations to improve access to efficient and appropriate levels of care. *Geographic Adjustment in Medicare Payment - Phase II: Implications for Access, Quality, and Efficiency* expresses the importance of ensuring the availability of a sufficient health care workforce to serve all beneficiaries, regardless of where they live.

promise of early care and education, it has been financed in such a way that high-quality early care and education have only been available to a fraction of the families needing and desiring it and does little to further develop the early-care-and-education (ECE) workforce. It is neither sustainable nor adequate to provide the quality of care and learning that children and families need — a shortfall that further perpetuates and drives inequality. Transforming the Financing of Early Care and Education outlines a framework for a funding strategy that will provide reliable, accessible high-quality early care and education for young children from birth to kindergarten entry, including a highly qualified and adequately compensated workforce that is consistent with the vision outlined in the 2015 report, Transforming the Workforce for Children Birth Through Age 8: A Unifying Foundation. The recommendations of this report are based on essential features of child development and early learning, and on principles for high-quality professional practice at the levels of individual practitioners, practice environments, leadership, systems, policies, and resource allocation. Immediately expand emergency relief and exercise the Defense Production Act. 5. Safely reopen schools, businesses, and travel while protecting workers. 6. Protect those most at risk and advance equity, including across racial, ethnic and rural/urban lines. 7. Restore U.S. leadership globally and build better preparedness for future threats.

Each of these goals are explained and detailed in the book, with evidence about the current circumstances and how we got here, as well as plans and concrete steps to achieve each goal. Also included is the full text of the many Executive Orders that will be issued by President Biden to achieve each of these goals. The National Strategy for the COVID-19 Response and Pandemic Preparedness is required reading for anyone interested in or concerned about the COVID-19 pandemic and its effects on American society.

The first edition of Pharmacy Practice Research Methods provided a contemporary overview of pharmacy practice research, discussing relevant theories, methodologies, models and techniques. It included chapters on a range of quantitative, qualitative, action research and mixed methods as well as management theories underpinning change in pharmacy practice. This new edition of the book is much broader and more diversified. It includes the quality improvement methods in pharmacy practice research, focusing on the key differences between high and low-income countries with regard to pharmacy practice research, as well as the main challenges faced when conducting such research – areas of significant global interest. In addition, a number of the chapters covering fast-moving fields where new methods have been developed and published have been updated. Featuring seven new topics and presenting future trends, the book also explains in detail methods used in covert and overt observations in pharmacy practice, as well as methods involved in realist research, which are important to countries seeking to produce evidence-based information in this area.

Americans are accustomed to anecdotal evidence of the health care crisis. Yet, personal or local stories do not provide a comprehensive nationwide picture of our access to health care. Now, this book offers the long-awaited health equivalent of national economic indicators. This useful volume defines a set of national objectives and identifies indicators--measures of utilization and outcome--that can "sense" when and where problems occur in accessing specific health care services. Using the indicators, the committee presents significant conclusions about the situation today, examining the relationships between access to care and factors such as income, race, ethnic origin, and location. The committee offers recommendations to federal, state, and local agencies for improving data collection and monitoring. This highly readable and well-organized volume will be essential for policymakers, public health officials, insurance companies, hospitals, physicians and nurses, and

The United States is rapidly transforming into one of the most racially and ethnically diverse nations in the world. Groups commonly referred to as minorities-including Asian Americans, Pacific Islanders, African Americans, Hispanics, American Indians, and Alaska Natives-are the fastest growing segments of the population and emerging as the nation's majority. Despite the rapid growth of racial and ethnic minority groups, their representation among the nation's health professionals has grown only modestly in the past 25 years. This alarming disparity has prompted the recent creation of initiatives to increase diversity in health professions. *In the Nation's Compelling Interest* considers the benefits of greater racial and ethnic diversity, and identifies institutional and policy-level mechanisms to garner

broad support among health professions leaders, community members, and other key stakeholders to implement these strategies. Assessing the potential benefits of greater racial and ethnic diversity among health professionals will improve the access to and quality of healthcare for all Americans.

Disparities in educational attainment among population groups have characterized the United States throughout its history. Education is sometimes characterized as the "great equalizer," but to date, the country has not found ways to successfully address the adverse effects of socioeconomic circumstances, prejudice, and discrimination that suppress performance for some groups. To ensure that the pursuit of equity encompasses both the goals to which the nation aspires for its children and the mechanisms to attain those goals, a revised set of equity indicators is needed. Measures of educational equity often fail to account for the impact of the circumstances in which students live on their academic engagement, academic progress, and educational attainment. Some of the contextual factors that bear on learning include food and housing insecurity, exposure to violence, unsafe neighborhoods, adverse childhood experiences, and exposure to environmental toxins. Consequently, it is difficult to identify when intervention is necessary and how it should function. A revised set of equity indicators should highlight disparities, provide a way to explore potential causes, and point toward possible improvements. Monitoring Educational Equity proposes a system of indicators of educational equity and presents recommendations for implementation. This report also serves as a framework to help policy makers better understand and combat inequity in the United States'

education system. Disparities in educational opportunities reinforce, and often amplify, disparities in outcomes throughout people's lives. Thus, it is critical to ensure that all students receive comprehensive supports that level the playing field in order to improve the well-being of underrepresented individuals and the nation.

Prospects and Challenges of Universal Secondary Education

In today's modern age where information is constantly being shared, intellectual property and protection remains a crucial aspect in economic development. Open access has emerged as a cutting-edge tool that allows writers and authors to share their work freely while still holding protection and security over it. With technology playing a crucial role in economic growth, open access practices could be a key contributor in the innovation and development of information and public policy. What researchers need is a comprehensive approach to the concept

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to*

It features the experiences of eleven countries from the pan-European region that have established baseline measures of their situation with regard to equitable access to water and sanitation. This was achieved through multi-stakeholders self-assessment processes by looking at geographical disparities, specific barriers faced by vulnerable and marginalized groups, affordability concerns, as well as the governance framework.

The USE started in 2007 and was meant to attain specific objectives namely: enhancing the sustainability of Universal Primary Education (UPE); increasing equitable access to Post Primary Educational Training (PPET); reducing the high cost of PPET; improving the quality of PPET and enhancing Public Private Partnership (PPP) in the provision of secondary education. Before USE there was high disparity between male and female student enrollment. The system favored boys more than it did for the girls. While USE brought dramatic increase in the enrollment of students, at the same time there was decline in the quality of education. The purpose of this study was to investigate the extent to which the USE objectives were being attained or not and the challenges involved in the process. The results helped to determine recommendations for the improvement of the policy.
