Comprehensive and concise review of the essential facts needed to do a successful clinical rotation in physical medicine and rehabilitation (PM&R). Writing to be quickly read and comprehended, the authors spell out the implications of brain injury, the effects of spinal cord injury, the uses of orthotics and prosthetics, and the crucial importance of cardiac and pulmonary rehabilitation to maximize functional independence. Additional chapters detail the principles of pediatric, neuromuscular, cancer, and orthopedic rehabilitation, and demonstrate the use of

cord injury, psychosocial and quality of life issues, and systems-based practice. Each chapter will follow a set format and review underlying pathophysiology and etiology, assessment (examination, testing, differential diagnosis, prognosis, risk factors), management (non-pharmacological, medications, surgical procedures, follow-up and monitoring, primary and secondary prevention, complications, practice pearls) and conclude with a brief summary of recent clinical advances/promising research. Dr. Sabharwal plans to write many of the chapters himself and enlist a small number of expert contributors from leading centers to ensure uniformity of style but diversity of experience.
