WATCH DOGS: THEIR TRAINING AND MANAGEMENT. By Lieut.-Col. E.H. Richardson. A VINTAGE DOG BOOKS CLASSIC REPRINT. Originally published in 1923, this extremely scarce early work on Guard Dogs is both expensive and hard to find in its first edition. VINTAGE DOG BOOKS have republished it, using the original text and photographs, as part of their CLASSIC BREED BOOKS series. The author was Commandant of the British War Dog School during the Great War and was also responsible for several other books on War Dogs. Although he was familiar with the training and management of many different breeds, he will always be strongly associated with his favoured breed, the Airedale Terrier. The book's three hundred and sixteen pages contain sixteen detailed chapters and are well illustrated with vintage photographs. The Story of the Watch-Dog. The Necessity for a Watch-Dog. Uses of a Watch-Dog. Purchasing a Dog. Training Dogs. Feeding, Exercising and Grooming. A Dog on its Travels. Breeding Dogs and Rearing Pups. The Dog's Health. Kenneling. Man-Tracking as a Protection. Dogs in the Great War. Dogs for the Police. British v. German Police Dogs. Etc. "The first to welcome, the foremost to defend, whose honest heart is still his master's own, Who labours, fights, loves, breathes for him alone." Byron. This is a fascinating read for any historian or enthusiast of the Guard and Watch-Dog types, but especially for lovers of the Airedale Terrier. The book also contains much information and advice that is still useful and practical today. Many of the earliest dog books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. VINTAGE DOG BOOKS are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Here are twelve deeply moving short stories from the perceptive pen of Cynthia Rylant. Each captures the moment when someone's life changes -- when an animal causes a human being to see things in a different way, and, perhaps, changes his life.

Excerpt from *Every Living Creature, or Heart-Training Through the Animal World*
Animal world is something to put to shame our own country, with its boasted Christian civilization and power, there, with a. Population of some three hundred million, there is but one-fourth the amount of crime that there is each year in England, with a population of less than twenty million, and only a small fraction of what it is in the United States, with a population less than one-fourth the population of India. These are most significant facts; they are indeed facts of tremendous import, and we would do wisely to estimate them at their proper value. About the Publisher

Man's Obsessive Quest to Catalog Life, from Nanobacteria to New Monkeys

Excerpt from The Popular Science Monthly
Gnoraunce of the future can hardly be good for any man or nation; nor can forecast of the future in the case of any man or nation well interfere with-the business of the present, though the language of colonial politicians seems often to imply that it may. No Canadian farmer would take his hand from the plough, no Canadian ar tisan would desert the foundery or the loom, no Canadian politician would become less busy in his quest of votes, no industry of any kind would slacken, no source of wealth would cease to flow, if the rulers of Canada and the powers of Down ing Street, by whom the rulers of Canada are supposed to be guided, instead of drifting on in darkness, knew for what port they were steering. For those who are actually engaged in mould ing the institutions of a young country not to have formed a conception of her destiny - not to have made up their minds whether she is to re main forever a dependency, to blend again in a vast confederation with the monarchy of the mother-country, or to be united to a neighboring republic - would be to renounce stateeamsnship. The very expenditure into which Canada is led by her position as a dependency in military and political railways, in armaments and defenses, and other things which assume the permanence of the present system, is enough to convict cana dian rulers of flagrant improvidence if the permanency of the present system is not distinctly established in their minds. He would be completely normal if he didn't live in a graveyard, being raised by ghosts, with a guardian who belongs to neither the world of the living nor the dead. There are adventures in the graveyard for a boy-an ancient Indigo Man, a gateway to the abandoned city of ghouls, the strange and terrible Sleer. But if Bod leaves the graveyard, he will be in danger from the man Jack-who has already killed Bod's family.

He watches with pride as his own children show a knack for medicine, and remarks on the talents and quirks of a string of Watch Dogs: Their Training & Management (a Vintage Dog Books Breed Classic - Airedale Terrier)

Four mind-bending novels from science fiction's most transformative decade in a deluxe collector's edition hardcover, including two long out-of-print classics In this second volume of a two-volume set gathering the best American science fiction from the tumultuous 1960s, R. A. Lafferty's quirky and utterly original Past Master, an unjustly neglected classic, imagines Sir Thomas More transported to the colony Astrobe in the year 2535, where he is made president of a future Utopia. In Picnic on Paradise, Joanna Russ presents her indelible heroine, Alyx, who is hired to protect a group of tourists in a hostile alien world. Samuel R. Delany's proto-cyberpunk space opera Nova, reprinted here for the first time in a text corrected by the author, combines the pacing of a revenge story with the arc of a galil-quest legend. Jack Vance's dystopian thriller Emphyrio is the coming-of-age story of Ghyll, who has been raised in a world barring the use of automation but has a strong sense of subversive individualism. The novel has been restored to the author's original text, without later editorial interventions.

" If you have any interest in life beyond your own, you should read this book. " —Paul R. Ehrlich, author of The Dominant Animal Biologist Rob Dunn ' s Every Little Thing is the story of man ' s obsessive quest to catalog life, from nanobacteria to new monkeys. In the tradition of E.O. Wilson, this engaging and fascinating work of popular science follows humanity ' s unending quest to discover every living thing in our natural world—from the unimaginably small in the most inhospitable of places on earth to the unimaginably far away in the unexplored canals on Mars.

The New York Times bestselling author of Wintering writes a life-affirming exploration of wild landscapes, what it means to be different and, above all, how we can all learn to make peace with our own unquiet minds. . . . In anticipation of her 38th birthday, Katherine May set out to walk the 630-mile South West Coast Path. She wanted time alone, in nature, to understand why she had stopped coping with everyday life, why motherhood had been so overwhelming and isolating; and why the world felt full of expectations she couldn't meet. She was also reeling from a chance encounter with a voice on the radio that sparked her realization that she might be autistic. And so begins a trek along the ruggedly beautiful but difficult path by the sea that takes readers through the alternately frustrating, funny, and enlightening experience of re-awakening to the world around us... The Electricity of Every Living Thing sees Katherine come to terms with that diagnosis leading her to re-evaluate her life so far — with a much kinder, more forgiving eye. We bear witness to a new understanding that finally allows her to be different rather than simply awkward, arrogant or unfeeling. The physical and psychological journeys of this joyous and inspiring book become inextricably entwined, and as Katherine finds her way across the untemeable coast, we learn alongside her how to find our way back to our own true selves.

The globetrotting naturalists of the eighteenth century were the geeks of their day: innovators and explorers who lived at the intersection of science and commerce. Foremost among them was Carl Linnaeus, a radical thinker who revolutionized biology. In What Linnaeus Saw, Karen Magnuson Bell chronicles Linnaeus ' s life and career in readable, relatable prose. As a boy, Linnaeus hated school and had little interest in taking up the religious profession his family had chosen. Though he struggled through Latin and theology classes, Linnaeus was an avid student of the natural world and explored the school ' s gardens and woods, transfixed by the properties of different plants. At twenty-five, on a solo expedition to the Scandinavian Mountains, Linnaeus documented and described dozens of new species. As a medical student in Holland, he moved among leading scientific thinkers and had access to the best collections of plants and animals in Europe. What Linnaeus found was a world with no consistent system for describing and naming living things—a situation he methodically set about changing. The Linnaeus system for classifying plants and animals, developed and refined over the course of his life, is the foundation of modern scientific taxonomy, and inspired and guided generations of scientists. What Linnaeus Saw is rich with biographical anecdotes—from his attempt to identify a mysterious animal given him by the king to successfully growing a rare and exotic banana plant in Amsterdam to debunking stories of dragons and phoenixes.

Thoroughly researched and generously illustrated, it offers a vivid and insightful glimpse into the life of one of modern science ' s founding thinkers.
