The Essential Guide To Turning Your Ph.D. Into a Job

Often the finest artists do not make the best teachers. Many frustrated college students know this all too well as they suffer through unstructured classes with inexperienced

graduate student instructors. In these situations, it is easy to blame the teachers. But the problem is largely institutional: most students graduating with MFAs from art schools receive little if any instruction in teaching art. If you find yourself in this predicament as teacher or student, this book is for you. The first book to provide a comprehensive guide for teaching college-level art, *The Art of Teaching Art* is the culmination of respected artist and instructor Deborah Rockman's two decades of teaching experience. Believing that drawing is the foundation of all of the visual arts, she begins with a complete explanation of drawing concepts that apply to any subject matter, e.g., composition, sighting processes, scaling techniques, and modeling linear and tonal development. She then illustrates these concepts with step-by-step methods that easily translate to classroom exercises. Next, she applies the drawing principles to even the most important and challenging subject, the human figure. After an extended section on understanding and teaching perspective that explores illusionistic form and space, the book shifts to the studio classroom itself and the essential elements that go into creating an effective learning environment and curriculum. From preparing materials lists and syllabi to setting up still-lives, handling difficult classroom situations, critiquing and grading student artworks, and shooting slides of student artworks, she leaves no stone unturned.

An essential guide for succeeding in today's competitive environment, this book provides beginning scientists and experienced researchers with practical advice on writing about their work and getting published. This new, updated edition discusses the latest print and Internet resources. Preparing, submitting and publishing scientific papers is now largely electronic; the book has been revised to reflect this. New material includes more information on preparing supplementary material online, using reference management software, and preparing tables and figures; expanded sections on structuring a discussion section and the strengths and weaknesses of the research; and additional material on international aspects of scientific writing. This book guides readers through the processes involved in writing and publishing for scientific journals, from choosing a suitable journal to presenting results and citing references. It covers current issues in scientific publishing; explains rights and permissions; and discusses writing grant proposals, giving presentations and writing for general audiences.

A Best Book of the Year: NPR and Boston Globe Finally a novel that puts the "pissed" back into "epistolary." Jason Fitger is a beleaguered professor of creative writing and literature at Payne University, a small and not very distinguished liberal arts college in the midwest. His department is facing draconian cuts and squalid quarters, while one floor above them the Economics Department is getting lavishly remodeled offices. His once-promising writing career is in the doldrums, as is his romantic life, in part as the result of his unwise use of his private affairs for his novels. His star (he thinks) student can't catch a break with his brilliant (he thinks) work Accountant in a Bordello, based on Melville's Bartleby. In short, his life is a tale of woe, and the vehicle this droll and inventive novel uses to tell that tale is a series of hilarious letters of recommendation that Fitger is endlessly called upon by his students and colleagues to produce, each one of which is a small masterpiece of high dudgeon, low spirits, and passive-aggressive strategies. We recommend Dear Committee Members to you in the strongest possible terms.

Discusses the challenges of teaching undergraduates and covers such subjects as leading discussions, creating lesson plans, and grading.

How does graduate admissions work? Who does the system work for, and who falls through its cracks? More people than ever seek graduate degrees, but little has been written about who gets in and why. Drawing on firsthand observations of admission committees and interviews with faculty in 10 top-ranked doctoral programs in the humanities, social sciences, and natural sciences, education professor Julie Posselt pulls back the curtain on a process usually conducted in secret. "Politicians, judges, journalists, parents and prospective students subject the admissions policies of undergraduate colleges and professional schools to considerable scrutiny, with much public debate over appropriate criteria. But the question of who gets into Ph.D. programs has by comparison escaped much discussion. That may change with the publication of Inside Graduate Admissions...While the departments reviewed in the book remain secret, the general process used by elite departments would now appear to be more open as a result of Posselt's book." —Scott Jaschik, Inside Higher Ed "Revealing...Provide[s] clear, consistent insights into what admissions committees look for." —Beryl Lieff Benderly, Science

Should I go to graduate school? How do I choose where to apply? Are my grades and accomplishments good enough to get in? Who should I ask to write recommendation letters for me, and how should I approach these people? How do I write my "personal statement?" When will I hear my fate, and how should I make my final decision? These are just a few of the many questions to which this well-researched, thorough, and extremely user-friendly book offers answers. Students who are contemplating graduate training in psychology, counseling, and related fields are often apprehensive and confused about applying to graduate

school, but this book takes the guesswork and anxiety out of the process. The tone and features (such as the Q&A format, timeline for application-related tasks and activities, and special advice for special populations) that made the first edition so successful, eliciting hundreds of thank-you notes and e-mail messages to the author, are just as evident in this new edition. The book has been thoroughly updated to include coverage of new topics such as use of the internet and e-mail, as well as changing trends in the professions. The most obvious difference is that the book is now significantly shorter as a result of meticulous rewriting, making it even easier to use. There have been attempts since the publication of the first edition to copy the format of this book, but none of the others have successfully duplicated the depth of research-based advice and the supportive style that make this book the guide of choice for thousands of graduate-school bound students and their advisors.

Seasoned classroom veterans, pre-tenured faculty, and neophyte teaching assistants alike will find this book invaluable. HHMI Professor Jo Handelsman and her colleagues at the Wisconsin Program for Scientific Teaching (WPST) have distilled key findings from education, learning, and cognitive psychology and translated them into six chapters of digestible research points and practical classroom examples. The recommendations have been tried and tested in the National Academies Summer Institute on Undergraduate Education in Biology and through the WPST. Scientific Teaching is not a prescription for better teaching. Rather, it encourages the reader to approach teaching in a way that captures the spirit and rigor of scientific research and to contribute to transforming how students learn science.

Introductory and capstone experiences in the undergraduate psychology program are crucial ways to engage students in their major and psychology department, impart realistic expectations, and prepare them for life beyond college. Providing the right orientation and capstone courses in psychology education is increasingly a concern of instructors, department chairs, program directors, and deans, and both types of courses have become important sources for gathering pre- and post-coursework assessment data for degree learning outcomes. The strategies presented here have been designed to help educators examine issues around teaching the introductory or careers course and developing a psychology-specific orientation program. The authors also provide concrete suggestions for building capstone experiences designed to fit the needs of a department, its pedagogical philosophy, or the educational agenda of the college or university. Undergraduate psychology curriculum designers and instructors can benefit from learning innovative and effective strategies for introducing the major to first-year students and, at graduation, for bringing closure, reinforcing the overall departmental learning outcomes, and helping students apply their disciplinary knowledge in capstone experiences and post-graduate life. In this collection of articles, psychology instructors involved in the improvement of teaching and learning review the research and share their own successes and challenges in the classroom. Discussions include effective practices for helping students become acclimated to and engaged in the psychology major, application of developmental knowledge and learning communities to course design, and use of quality benchmarks to improve introductory and capstone courses. Other chapters describe innovations in the design of stand-alone courses and offer concrete advice on counseling psychology graduates about how to use what they have learned beyond their higher education experiences.

opportunities. A detailed time line and multiple worksheets help students decide where to apply, build their credentials, develop strong applications, and make an informed final decision.
