*With new standards emphasizing higher-order thinking skills, students will have to demonstrate their ability to do far more than simply remember facts and procedures. But what's the best way for teachers to ensure that students have such skills? In this highly accessible guide, author Susan M. Brookhart shows how to do just that, by providing specific guidelines for designing targeted questions and tasks that align with standards and assess students' ability to think at higher levels. Aided by dozens of examples across grade levels and subject areas, readers will learn how to \* Take a student perspective and view assessment questions and tasks as "problems to solve." \* Design multiple-choice questions that require higher-order thinking. \* Understand the difference between "open" and "closed" questions and how to use open questions effectively. \* Vary and control the features of performance assessment tasks, including cognitive level and difficulty, to target different thinking skills. \* Manage the assessment of higher-order thinking within the larger context of teaching and learning. Brookhart also provides an "idea bank" that teachers can use to jump-start their own thinking as they create assessments. Timely and practical, How to Design Questions and Tasks to Assess Student Thinking is essential reading for 21st century teachers who want their students to excel in the classroom and beyond. Note: This product listing is for the reflowable (ePub) version of the book.*

This study develops and documents a new methodology that uses the Lexile Framework[R] for Reading to determine the proportion of grade 11 Texas public school students whose scores on the exit-level Texas Assessment of Knowledge and Skills for English language arts and reading (TAKS-ELAR) or the TAKS-ELAR Accommodated indicate the ability to read and comprehend textbooks used in entry-level (freshman) English courses in the University of Texas system. The findings show that at the 75 percent comprehension level, 51 percent of students can read 95 percent of first-year English textbooks used in entry-level classes in the University of Texas system, 80 percent can read 50 percent of the textbooks, and 9 percent can read no more than 5 percent of the textbooks. The study demonstrates that the methodology developed and documented in this report can be applied in a real-world context. Providing policymakers with information about the proportion of high school students who are prepared to read entry-level college material at the University of Texas system can help policymakers evaluate and understand the effectiveness of efforts to align high school curriculum and instruction with requirements for postsecondary success. Appendices include: (1) Description of the Lexile Framework[R] for Reading; (2) Description of grade 11 exit-level Texas Assessment of Knowledge and Skills for English language arts and reading; (3) Calculating percentiles for the textbook sample; (4) Using random sampling; (5) Textbooks used by University of Texas system schools; and (6) Complete data tables from application of

linking methodology. (Contains 25 tables, 1 figure and 18 notes.) [For the summary report, see ED513586.]
