

## *Expedition 1998 Overhead*

First published in 1855, this is an account of a British government-financed expedition to further European commercial interests in West Africa. It details the surveying of sites for future missions which has a profound effect on the history of Southern Nigeria.

Antarctica is renowned for its extreme cold; yet surprisingly, radar measurements have revealed a vast network of lakes, rivers, and streams several kilometers beneath the Antarctic ice sheet. Sealed from Earth's atmosphere for millions of years, they may provide vital information about microbial evolution, the past climate of the Antarctic, and the formation of ice sheets, among other things. The next stage of exploration requires direct sampling of these aquatic systems. However, if sampling is not done cautiously, the environmental integrity and scientific value of these environments could be compromised. At the request of the National Science Foundation, this National Research Council assesses what is needed to responsibly explore subglacial lakes. *Exploration of Antarctic Subglacial Aquatic Environments* concludes that it is time for research on subglacial lakes to begin, and this research should be guided by internationally agreed upon protocols. The book suggests an initial protocol, which includes full characterization of the lakes by remote sensing, and minimum standards for biological and other types of contamination.

The archaeology of caves in Ireland is a ground-breaking and unique study of the enigmatic, unseen and dark silent world of caves. People have engaged with caves for the duration of human occupation of the island, spanning 10,000 years. In prehistory, subterranean landscapes were associated with the dead and the spirit world, with evidence for burials, funerary rituals and votive deposition. The advent of Christianity saw the adaptation of caves as homes and places of storage, yet they also continued to feature in religious practice. Medieval mythology and modern folklore indicate that caves were considered places of the supernatural, being particularly associated with otherworldly women. Through a combination of archaeology, mythology and popular religion, this book takes the reader on a fascinating journey that sheds new light on a hitherto neglected area of research. It encourages us to consider what underground activities might reveal about the lives lived aboveground, and leaves us in no doubt as to the cultural significance of caves in the past. Marion Dowd is Lecturer in Prehistoric Archaeology at the Institute of Technology Sligo, Ireland. Her doctoral research examined the role of caves in Irish prehistoric ritual and religion. She has directed excavations in many caves, and has published and lectured widely on the subject.

Scott's Last Expedition

How to Rebuild - Revised Edition

The early explorers up through those of the early part of the last century were the supreme users of management practices that have been formalized today. Their expeditions had all the characteristics of a business project: goal setting, strategizing, applying finite resources, risk-taking, keeping people, dealing with competitors, and many others. During actual expeditions, the leaders faced many risks and conflicts that challenge the best leaders today, from small to large enterprises. Like all projects and business ventures, the expeditions met their goal, either partially or entirely, and in some cases exceeded it or failed it completely. *Management Lessons from the Great Explorers* selects the most famous, and in some cases infamous, explorers to discuss and analyze the good and bad management practices—even though these explorers may have never called them management practices—they used before, during, and even after their expeditions. Each chapter provides historical background on the explorer and the details about their explorations. The chapters then discuss the challenges the explorers faced when planning and executing their expeditions and examine their successes and failures from a management perspective. The book will help managers to Manage unexpected and potentially catastrophic risks Set goals that open up new horizons Communicate effectively with team members Lead teams through hardships and difficulties The final chapter gives lessons learned that managers may take from the book and apply to their own business undertakings. These lessons include Learn from experience Having a strong sponsor and team Relying on data and information Applying risk management and adapting to changing circumstances Implementing unity of command and defining roles and responsibilities Identifying and understanding stakeholders Being decisive Being willing to say no

*Without Quarter* is the story of the first major U.S. army expedition against the Comanches between the Mexican and Civil wars. Chalfant first sets the historical context, then traces events to the battle at Crooked Creek on May 13, 1859.

*Popular Science* gives our readers the information and tools to improve their technology and their world. The core belief that *Popular Science* and our readers share: The future is going to be better. Science and technology are the driving forces that will help make it better.

*La Conquistadora* explores Mary's prominence on and off the battlefield in the culturally and ethnically diverse world of medieval Iberia, where Muslims, Christians, and Jews lived side by side, and in colonial Mexico, where Spaniards and indigenous peoples mingled.

The *La Salle Expedition on the Mississippi River* presents the definitive English translation of Nicolas de La Salle's diary account of René-Robert Cavelier, Sieur de La Salle's 1682 discovery expedition of the Mississippi River from Canada to the Gulf of Mexico. This previously unknown manuscript copy was discovered recently in the collection of rare books in the Texas State Archives. It provides the most complete and authoritative account

available of this historic North American adventure and territorial claim. By careful cross- document analysis, Foster projects an extended expedition chronology that adds about two weeks to the journey, corrects the date that La Salle's claim was announced, and revises erroneous interpretations made by most contemporary French and American scholars. The work includes maps prepared by the noted Southwest cartographer John V. Cotter  
A powerful account of a famously tragic expedition.

*One Man's Quest to Find the Hidden Treasure of the*

As a boy growing up in rural Arkansas, Bob Brewer often heard from his uncle and his great-uncle about a particular tree in the woods, the "Bible Tree," filled with strange carvings. Years later he would learn that this tree was carved with symbols associated with the Knights of the Golden Circle, a Civil War-era secret society that had buried gold coins and other treasure in various remote locations across the South and Southwest in hopes of someday funding a second War Between the States. These secret caches were guarded by sentinels, men whose responsibility it was to watch and protect these sites. To his astonishment, Bob discovered that both his uncle and his great-uncle had been twentieth-century sentinels, and that he had grown up near an important KGC treasure site. In *Shadow of the Sentinel*, Bob Brewer and investigative journalist Warren Getler tell the fascinating story of the Knights of the Golden Circle and the hidden caches the KGC established across the country. Brewer reveals how, with agonizing effort, he eventually deciphered the fiendishly complicated KGC codes and ciphers, which drew heavily on images associated with Freemasonry. (Many of the key KGC post-Civil War leaders were Scottish Rite Masons, who used the cover of that secret fraternity to conduct their activities.) Using his knowledge of KGC symbolism to crack coded maps, Brewer has located several KGC caches and has recovered gold coins, guns, and other treasure from some of them. *Shadow of the Sentinel* is the most comprehensive account yet of the activities of the KGC after the Civil War and, indeed, into the 1900s. Getler and Brewer suggest that the clandestine network of KGC operatives was far wider than previously thought, and that it included Jesse James, the former Confederate guerrilla whose stage and bank robberies helped to fill KGC treasure chests. This is a rousing and provocative adventure that weaves together one man's personal quest with an intriguing, little-known chapter in America's hidden history.

Since 1991, the popular and highly modifiable Ford 4.6-liter has become a modern-day V-8 phenomenon, powering everything from Ford Mustangs to hand-built hot rods and the 5.4-liter has powered trucks, SUVs, the Shelby GT500, and more. The wildly popular 4.6-liter has created an industry unto itself with a huge supply of aftermarket high-performance parts, machine services, and accessories. Its design delivers exceptional potential, flexibility, and reliability. The 4.6-liter can be built to produce 300 hp up to 2,000 hp, and in turn, it has become a favorite among rebuilders, racers, and high-performance enthusiasts. *4.6-/5.4-Liter Ford Engines: How to Rebuild* expertly guides you through each step of rebuilding a 4.6-liter as well as a 5.4-liter engine, providing essential information and insightful detail. This volume delivers the complete nuts-and-bolts rebuild story, so the enthusiast can professionally rebuild an engine at home and achieve the desired performance goals. In addition, it contains a retrospective of the engine family, essential identification information, and component differences between engines made at Romeo and Windsor factories for identifying your engine and selecting the right parts. It also covers how to properly plan a 4.6-/5.4-liter build-up and choose the best equipment for your engine's particular application. As with all Workbench Series books, this book is packed with detailed photos and comprehensive captions, where you are guided step by step through the disassembly, machine work, assembly, start-up, break-in, and tuning procedures for all iterations of the 4.6-/5.4-liter engines, including 2-valve and 3-valve SOHC and the 4-valve DOHC versions. It also includes an easy-to-reference spec chart and suppliers guide so you find the right equipment for your particular build up.

Report of the Exploring Expedition to the Rocky Mountains in the Year 1842

An account of Heyerdahl's journey on the rivers, oceans, and seas that connected the various centers of ancient Middle Eastern civilization, which are seen to have exchanged many aspects of their economics, arts, sciences, and ways of life

After a night of celebrating his graduation from law school, young John Stevens wakes to find himself in the bathtub, bleeding from the head and suffering the worst hangover he has ever had. His pain is just a precursor of the agony that awaits him when he discovers his beautiful girlfriend slaughtered on his kitchen floor. As the prime suspect, John's life is thrown into turmoil; and his family is drawn into a nightmare that destroys everything his middle class parents have struggled to achieve. With limited resources, Tom Stevens, John's middle aged, hard working father, hires an inept attorney to defend his son. The trial is a disaster, and the father, committed to saving his son takes matters into his own hands. The results are explosive. This incredible saga grabs you from the grizzly opening scene and holds you spellbound to the last page. Set in colorful New Orleans, Burgess's story of family love, struggle, loss, and a father's promise to his imprisoned son blends the history and customs of this unique city with the unforgettable characters who are caught up in John Steven's nightmare.

Differentiating for the Young Child is designed to help primary teachers cope with the increase of diverse knowledge sets and different learning styles. This book addresses early identification by using differentiation and offers strategies and methods for intellectual discovery and creative thinking. It tackles issues relating to undeserved students, emphasizes key discipline areas, and discusses differentiated technology use. Forms, charts, samples, and appendices are included throughout the book to help general education teachers apply the material to their classrooms. This book to inspire educators to move in new directions to meet the diverse needs of young students

An Expedition Into Community Psychology

American and Import, 1992-2001

Max Esser was an adventurous young merchant banker, a Rhinelander, who became the first managing director of the largest German plantation company in Cameroon. This volume gives a vivid account of the antecedents and early stages as experienced and described by Esser. In 1896 he ventured, with the explorer Zintgraff, into the hinterland to seek the agreement of Zintgraff's old ally, the ruler of Bali, for the provision of laborers for his projected enterprise. The consequences, many optimistically unforeseen, are illustrated with the help of contemporary materials. Esser's account is preceded by a look at his and his family's connections, added to by an account of newspaper campaigns against him, and completed by an examination of his Cameroon collection, which he gave to the Linden Museum in Stuttgart.

Features accurate, up-to-date wholesale and retail prices on used cars and trucks from 1992 to 2001, covering both domestic and imported makes and models, as well as detailed information about automobile specifications, fuel efficiency, standard and optional equipment, ratings and reviews, and much more. Original.

From a recognized authority on the High Plains Indians wars comes this narrative history blending both American Indian and U.S. Army perspectives on the attack that destroyed the village of Northern Cheyenne chief Morning Star. Of momentous significance for the Cheyennes as well as the army, this November 1876 encounter, coming exactly six months to the day after the Custer debacle at the Little Bighorn, was part of the Powder River Expedition waged by Brigadier General George Crook against the Indians. Vital to the larger context of the Great Sioux War, the attack on Morning Star's village encouraged the eventual surrender of Crazy Horse and his Sioux followers. Unbiased in its delivery, Morning Star Dawn offers the most thorough modern scholarly assessment of the Powder River Expedition. It incorporates previously unsynthesized data from the National Archives, the Library of Congress, the U.S. Army Military History Institute, and other repositories, and provides an examination of all facets of the campaign leading to

and following the destruction of Morning Star's village.

A reference for anyone looking to buy a used car gives ratings and standard prices for cars, pickups, sport utilities, and vans, as well as useful information about safety data and options.**

**Atmospheric Research in Antarctica: Present Status and Thrust Areas in Climate Change** represents a panoramic view of the developments in the field of Antarctic atmospheric sciences and meteorology broadly covering geomagnetism and aeronomy, middle atmospheric studies and global and climate change studies. It includes greenhouse gases, ozone monitoring as well as very low frequency (VLF) phenomena, and space weather, Antarctic meteorology, and mathematical modeling of atmosphere and ocean processes around Antarctica. Atmospheric electricity and aerosols investigations over Antarctica along with the total solar eclipse-related studies, calibration of AWIFS Sensor, and measurements of positive ions, are also discussed. This book is aimed at researchers and graduate students in atmospheric studies, meteorology, Antarctic studies, climate change. **FEATURES:** Covers scientific aspects of Antarctic meteorology and atmospheric sciences under climate change scenario Contains diverse set of information with strong bearing on recent and past polar processes Presents integrated research on polar science coupled with meteorological, climatological and atmospheric sciences Thoroughly reviews geomagnetism and aeronomy, middle atmospheric studies including global and climate change studies Helps readers understand how Antarctica's climate has changed in the past and is being affected by 'global warming' and how might we expect its climate to change in the future?
