A distinguished anthropologist explores the complex mysteries of human evolution in a study that examines how human ancestors learned to walk upright, arguing that bipedalism--even more than a large brain or a facility with language--played a pivotal role in the development of humankind.

A fresh approach that helps students apply scientific principles to solve real-world problems Designed for introductory courses in biological anthropology with laboratory components, Exploring Biological Anthropology can be used with any introductory text. Author Frank L'Engle Williams emphasizes critical thinking and the comparative perspective to understand key concepts in biological anthropology, which helps students to further explore what they learn in the classroom.

Now in its fourth edition, Exploring Medical Anthropology provides a concise and engaging introduction to medical anthropology. It presents competing theoretical perspectives in a balanced fashion, highlighting points of conflict and convergence. Concrete examples and the author ' s personal research experiences are utilized to explain some of the discipline ' s most important insights, such as that biology and culture matter equally in the human experience of disease and that medical anthropology can help to alleviate human suffering. The text has been thoroughly updated for the fourth edition, including fresh case studies and a new chapter on drugs. It contains a range of pedagogical features to support teaching and learning, including images, text boxes, a glossary, and suggested further reading.

What makes humans unique? What makes us the most successful animal species inhabiting the Earth today? Most scientists agree that the key to our success is the unusually large size of our brains. Our large brains gave us our exceptional thinking capacity and led to humans' other distinctive characteristics, including advanced communication, tool use, and walking on two legs. Or was it the other way around? Did

Download Free Exploring Biological Anthropology Stanford

the challenges faced by early humans push the species toward communication, tool use, and walking and, in doing so, drive the evolutionary engine toward a large brain? In this provocative new book, Craig Stanford presents an intriguing alternative to this puzzling question--an alternative grounded in recent, groundbreaking scientific observation. According to Stanford, what made humans unique was meat. Or, rather, the desire for meat, the eating of meat, the hunting of meat, and the sharing of meat. Based on new insights into the behavior of chimps and other great apes, our now extinct human ancestors, and existing hunting and gathering societies, Stanford shows the remarkable role that meat has played in these societies. Perhaps because it provides a highly concentrated source of protein--essential for the development and health of the brain--meat is craved by many primates, including humans. This craving has given meat genuine power--the power to cause males to form hunting parties and organize entire cultures around hunting. And it has given men the power to manipulate and control women in these cultures. Stanford argues that the skills developed and required for successful hunting and especially the sharing of meat spurred the explosion of human brain size over the past 200,000 years. He then turns his attention to the ways meat is shared within primate and human societies to argue that this all-important activity has had profound effects on basic social structures that are still felt today. Sure to spark a lively debate, Stanford's argument takes the form of an extended essay on human origins. The book's small format, helpful illustrations, and moderate tone will appeal to all readers interested in those fundamental questions about what makes us human.

Studyguide for Exploring Biological Anthropology

Can we live with the consequences of wiping our closest relatives off the face of the Earth, and all the biological knowledge about ourselves that would die along with them? Extinction of the great apes threatens to become a reality within a few human generations. Stanford tells us how we can redirect the course of an otherwise bleak future. For courses in Biological Anthropology Present a concise overview of biological anthropology, from early foundations to recent innovations Exploring Biological Anthropology: The Essentials combines concise coverage of the foundations of the field with modern innovations and discoveries, helping students understand, and get excited about, the discipline. Because the authors conduct research in three of the main areas of biological anthropology—the human fossil record (Susan Antón), primate behavior and ecology (Craig Stanford), and human biology and the brain (John Allen)—they offer a specialist approach that engages students and gives them everything they need to master the subject. The Fourth Edition continues to present traditional physical

Download Free Exploring Biological Anthropology Stanford

anthropology within a modern Darwinian framework, and includes coverage of contemporary discoveries to highlight the ever-increasing body of knowledge in biological anthropology. Also available with MyAnthroLab® MyAnthroLab for the Biological Anthropology course extends learning online to engage students and improve results. Media resources with assignments bring concepts to life, and offer students opportunities to practice applying what they've learned. Please note: this version of MyAnthroLab does not include an eText. Tortoises may be the first family of higher animals to become extinct in the coming decades. They are losing the survival race because of what distinguishes them, in particular their slow, steady pace of life and reproduction. *The Last Tortoise* offers an introduction to these remarkable animals and the extraordinary adaptations that have allowed them to successfully populate a diverse range of habitats—from deserts to islands to tropical forests. The shields that protect their shoulders and ribs have helped them evade predators. They are also safeguarded by their extreme longevity and long period of fertility. Craig Stanford details how human predation has overcome these evolutionary advantages, extinguishing several species and threatening the remaining forty-five. At the center of this beautifully written work is Stanford's own research in the Mascarene and Galapagos Islands, where the plight of giant tortoise populations illustrates the threat faced by all tortoises. He addresses unique survival problems, from genetic issues to the costs and benefits of different reproductive strategies. Though the picture Stanford draws is bleak, he offers reason for hope in the face of seemingly inevitable tragedy. Like many intractable environmental problems, extinction is not manifest destiny. Focusing on tortoise nurseries

Download Free Exploring Biological Anthropology Stanford

and breeding facilities, the substitution of proxy species for extinct tortoises, and the introduction of species to new environments, Stanford's work makes a persuasive case for the future of the tortoise in all its rich diversity.

Present a concise overview of biological anthropology, from early foundations to recent innovations Revel(TM) for Exploring Biological Anthropology: The Essentials combines concise coverage of the foundations of the field with modern innovations and discoveries, helping students understand, and get excited about, the discipline. Because the authors conduct research in three of the main areas of biological anthropology - the human fossil record (Susan Antón), primate behavior and ecology (Craig Stanford), and human biology and the brain (John Allen) - they offer a specialist approach that engages students and gives them everything they need to master the subject. There's a silent epidemic in western civilization, and it is right under our noses. Our jaws are getting smaller and our teeth crooked and crowded, creating not only aesthetic challenges but also difficulties with breathing. Modern orthodontics has persuaded us that braces and oral devices can correct these problems. While teeth can certainly be straightened, what about the underlying causes of this rapid shift in oral evolution and the health risks posed by obstructed airways? Sandra Kahn and Paul R. Ehrlich, a pioneering orthodontist and a world-renowned evolutionist, respectively, present the biological, dietary, and cultural changes that have driven us toward this major health challenge. They propose simple adjustments that can alleviate this developing crisis, as well as a major alternative to orthodontics that promises more significant long-term relief. Jaws will change your life. Every parent should read this book.

As anthropologists, we offer this book about aging in a wide variety of human societies in the hope of its making three contributions. First, this book will help to remedy a massive

Download Free Exploring Biological Anthropology Stanford

neglect of old age by the discipline of anthropology. The pioneering work of Leo Simmons (1945) has remained a lonely monument since the 1940's, for despite recent interest in the subject of aging in modern Western societies on the part of social gerontologists and sociologists, little has been done by anthropologists on aging in non-Western societies. Where it has been treated at all, it has been in the form either of a few final paragraphs in the discussion of the life cycle or of a simple ethnographic fact among other facts about a certain social system. What has been missing has been any attempt to put aging in a cross-cultural or comparative perspective, to give this vital subject the same treatment that has been accorded marriage, for example, or death or inheritance or sex roles. Second, this book will bring a needed cross-cultural perspective to the study of social gerontology. The recent explosion of interest in this field has been largely confined to the study of aging in North America and Europe. But we anthropologists feel that such a culturally limited study, though interesting and productive in its own right, is dangerously narrow if it does not consider what aging is like in other societies. What aspects of aging, for example, are human universals and have to be planned for as inevitable, and what aspects are cultural particulars and can be avoided, modified, or strengthened under certain social conditions? By presenting both a biological account of the universals of human aging (Weiss), and specific ethnographic accounts of aging in a wide variety of societies, we believe we can help to put North American aging into perspective Third, we hope this book will serve as an illustration of a particular anthropological approach to unity and diversity in human societies and cultures. Perhaps the main task of sociocultural

Download Free Exploring Biological Anthropology Stanford

anthropology is a twofold one: the explanation of cross-cultural universals, somehow rooted either in the biological nature of the human species or in universal imperatives of social organization, and the explanation of intercultural variations, rooted in a dialectical interaction between culture and the material conditions (partially created by culture) in which it exists. If unity and diversity can indeed be explained in this way, the cross-cultural study of aging can serve as a paradigm. By first setting out what seem to be the universals determined by the biology of the human species, and by then exploring the range of variation in cultural solutions, we ought to be able to formulate a set of principles that will allow us to explain why variations occur in a certain way. Nine ethnographic case studies are enough, we believe, to enable us to formulate some preliminary hypotheses about the nature and causes of variation in the social process of aging.

A valuable resource for you Biological Anthropology lab Method and Practice in Biological Anthropology: A Workbook and Laboratory Manual for Introductory Courses complements a wide variety of introductory level laboratory courses in biological anthropology. It easily functions with a well-equipped laboratory, or it may be used as a primary source of photos and/or exercises, providing optimum flexibility to suit most laboratory environments. The book is organized into four sections, to reflect the organization of the typical introductory biological anthropology course: genetics and evolution, the human skeleton, non human primates, and our fossil ancestors. MySearchLab is a part of the Hens program. Research and writing tools, including access to academic journals, help students explore biological anthropology in even greater depth. To provide students with

Why do we do the things we do? Over a decade in the making, this game-changing book is Robert Sapolsky's genre-shattering attempt to answer that question as fully as perhaps only he could, looking at it from every angle. Sapolsky's storytelling concept is delightful but it also has a powerful intrinsic logic: he starts by looking at the factors that bear on a person's reaction in the precise moment a behavior occurs, and then hops back in time from there, in stages, ultimately ending up at the deep history of our species and its genetic inheritance. And so the first category of explanation is the neurobiological one. What goes on in a person's brain a second before the behavior happens? Then he pulls out to a slightly larger field of vision, a little earlier in time: What sight, sound, or smell triggers the nervous system to produce that behavior? And then, what hormones act hours to days earlier to change how responsive that individual is to the stimuli which trigger the nervous system? By now, he has increased our field of vision so that we are thinking about neurobiology and the sensory world of our environment and

Download Free Exploring Biological Anthropology Stanford

endocrinology in trying to explain what happened. Sapolsky keeps going--next to what features of the environment affected that person's brain, and then back to the childhood of the individual, and then to their genetic makeup. Finally, he expands the view to encompass factors larger than that one individual. How culture has shaped that individual's group, what ecological factors helped shape that culture, and on and on, back to evolutionary factors thousands and even millions of years old. The result is one of the most dazzling tours de horizon of the science of human behavior ever attempted, a majestic synthesis that harvests cutting-edge research across a range of disciplines to provide a subtle and nuanced perspective on why we ultimately do the things we do...for good and for ill. Sapolsky builds on this understanding to wrestle with some of our deepest and thorniest questions relating to tribalism and xenophobia, hierarchy and competition, morality and free will, and war and peace. Wise, humane, often very funny, Behave is a towering achievement, powerfully humanizing, and downright heroic in its own right. The Essentials by Stanford, Craig, ISBN 9780205907601

"Exploring Biological Anthropology, 2/e," is a core concepts version of the successful text, "Biological Anthropology, 2/e." It provides students with a strong foundation in biological anthropology without some of the extended examples found in the original text. "Exploring Biological

Download Free Exploring Biological Anthropology Stanford

Anthropology, 2/e, " offers concise coverage of core material, while maintaining thorough coverage of traditionally important topics.

The history of research into the lives of wild chimpanzees now spans more than a half-century since Jane Goodall began it all. The past 20 years have seen tremendous advances in our understanding of our closest kin. These include revelations about our very similar genomes, but also many new discoveries about social behavior and ecology. New cultural traditions and forms of tool use, new evidence for the causes of violence, new evidence of patterns of hunting and meat-eating, and much more. Chimpanzees are new and different apes than they were at the close of the last century. The New Chimpanzee synthesizes the findings of the past 20 years and offers new insights and interpretations of what researchers have learned. The New Chimpanzee draws from results of the 7 longest term (25-55 years) research projects from which we've learned the most about the species, augmented by other shorter field projects conducted in recent years, including my own.--

THE ESSENCE OF ANTHROPOLOGY features an experienced and diverse author team with expertise in all subfields of anthropology. With an eye to visual and written clarity, the authors present anthropology from an integrated, holistic

Download Free Exploring Biological Anthropology Stanford

perspective. They use three unifying themes as a framework to tie the book together and keep students focused: systemic adaptation to emphasize that every culture, past and present, is an integrated and dynamic system of adaptation; biocultural connections that highlight the integration of human culture and biology in the steps humans take to meet the challenges of survival; and the emergence of globalization and its disparate impact on peoples and cultures around the world. Pedagogical elements support these main themes and give deeper insight into the meaning and relevance of a wide range of topics covered in the general narrative by tying examples to behavior today. Insightful questions foster critical thinking, additional Visual Counterpoints widen the book's array of compare-and-contrast examples, and a new Digging into Anthropology feature provides a hands-on approach to anthropological methods by giving active learning opportunities related to each chapter's content. In addition, the authors have broadened viewpoints to offer explanations and examples from different points of view. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

In The Alternative Introduction to Biological Anthropology, Second Edition, author Jonathan

Download Free Exploring Biological Anthropology Stanford

Marks presents an innovative framework for thinking about the major issues in the field with fourteen original essays designed to correlate to the core chapters in standard textbooks. Each chapter draws on and complements--but does not reconstitute (except for the sake of clarity)--the major data and ideas presented in standard texts. Marks explores such topics as how we make sense of data about our origins, where our modern ideas come from, our inability to separate natural facts from cultural facts and values as we try to understand ourselves, and the social and political aspects of science as a culturally situated mental activity.
