books, websites, and podcasts emphasize the critical role of the parent in shaping a child's destiny. But the obsession with parenting ignores a fundamental biological fact: that genetics affect every aspect of human behavior, and every child is uniquely "coded" with predispositions that affect everything from fearfulness, to impulsivity, to happiness. In *The Child Code*, award-winning professor Dr. Danielle Dick draws from her research in developmental behavior genetics to debunk the myth that parenting techniques alone can determine a child's behavior and future. Dr. Dick introduces

This powerful and fresh approach not only diminishes friction and stress in families, but sets children up for true, authentic success in life.
