*** Getting the most out of new storage and networking technologies**

Effective resource management and reliable equipment are essential for optimum plant performance. Computer-Managed Maintenance Systems goes beyond the simple selection and implementation of a CMMS. It also defines the changes in infrastructure, management philosophy and employee skills that must be implemented to gain maximum benefits from the CMMS. The book is designed to address the information needs of all levels of plant management. In this new edition, the authors have added a chapter specifically on the latest technology, Application Solution Providers (ASP) that has revolutionized the way CMMS are used and the benefits they can offer to a business. This solution provides integrated software, hardware and networking technology along with Information Technology (IT) consulting services into an outsourced package. A new appendix on Key Performance Indicators has also been added. Comprehensive, practical guide that covers selection, justification, and implementation of an effective CMMS in any facility All levels of plant management will find useful information in this step-by-step guide Includes a new chapter on ASP technologies Provides information on career development, the online office, document creation, telecommunications, business English, business law, information management, and other topics.

Quarterly Abstract Bulletin

Annotation "With the acceptance of computers in our everyday life, a new line of crime has emerged revolving around the computer. Just as computers make daily transactions more efficient, they have also made many crimes more efficient. This trend is likely to continue, and for that reason alone police investigators should make themselves better prepared for computer related crime investigations. Divided into four sections, this book proposes theoretical and practical information, interventions, directives, and ideas. This text will be a useful resource for law enforcement professionals, criminal justice students, security professionals, and private business."--BOOK JACKET. With the growth of the Internet, the personal finance industry has equally boomed, allowing individuals who previously had no control of their money to take the reins and start banking, investing, and controlling funds online without the need for pricey professional help. In 2002, the number of people investing online was around 20 million. In 2006, that number had ballooned to almost 55 million and the estimates for the 2007 fiscal year show that it has risen as much as 40 percent higher as more people realize the potential that online services provide. But for

many people, the complexities of finance are still too much. For that reason, this book was written

The New Office Professional's Handbook

In the news on a daily basis are reports of lost or stolen computer data, hacker successes, identity thefts, virus and spyware problems, and network incursions of various kinds. Many people, especially nonprofessional administrators of home or small business networks, feel helpless. In this book, technical security expert Philip Alexander explains in layman's terms how to keep networks and individual computers safe from the bad guys. In presenting solutions to these problems and many others, the book is a lifeline to those who know their computer systems are vulnerable to smart thieves and hackers—not to mention tech-savvy kids or employees who are swapping music files, stealing software, or otherwise making a mockery of the word security. In his job protecting data and combating financial fraud, Philip Alexander knows well which power tools are required to keep hackers and thieves at bay. With his gift for putting technical solutions in everyday language, Alexander helps readers with home and/or small business networks protect their data, their identities, and their privacy using the latest techniques. In addition, readers will learn how to protect PDAs and smartphones, how to make hardware thefts more unlikely, how to sniff out scammers and the motives of offshore tech support personnel who ask too many questions, and how to keep personal information safer when shopping over the Internet or telephone.
