This volume bears on wireless network modeling and performance analysis. The aim is to show how stochastic geometry can be used in a more or less systematic way to analyze the phenomena that arise in this context. It first focuses on medium access control mechanisms used in ad hoc networks and in cellular networks. It then discusses the use of stochastic geometry for

collection of hands-on lessons that cover key tools and strategies, Penetration Testing is the introduction that every aspiring hacker needs.

Modern database systems enhance the capabilities of traditional database systems by their ability to handle any kind of data, including text, image, audio, and video. Today, databasesystemsare particularlyrelevantto theWeb, astheycanprovidein puttocontent generators for Web pages, and can

handle queries issued over the Internet. The eXtensible Markup Language (XML) is used in applications running the gamut from content management through publishing to Web services and e-commerce. It is used as the universal communication language for exchanging music and graphics as well as purchase orders and technical documentation. As database systems increasingly talk to each other over the Web,

there is a fast-growing standard exchange format. As a result, many relational database systems can export data as XML documents and import data from XML documents and provide query and update capabilities for XML data. In addition, so called native XML database and integration systems are appearing on the database market, whose claim is to be especially tailored to storing, maintaining, and easily accessing XML

documents. After the huge success of the first XML Database Symposium (XSym 2003) last year in Berlin (already then in conjunction with VLDB) it was decided to establish this symposium as an annual event that is supposed to take place as an integral part of VLDB. The goal of this symposium is to provide a high-quality platform for the presentation and discussion of new research results and system developments. It is targeted at scientists, practitioners, vendors
