Study Guide for Use with Financial Accounting

Financial Accounting: An Integrated Approach is the fourth Australian edition of the introductory financial accounting text originally from Michael Gibbins' text of the same name. The text provides students with a thorough fundamental understanding of the accounting framework whilst simultaneously developing their preliminary technical skills in understanding and interpreting accounting concepts in an Australian and regional context.

This book proposes an integrated approach to sustainability reporting, the goal being to overcome certain limitations of the traditional additive approach, where the reporting of environmental, social and economic issues is sequential, but separate. It argues that to successfully communicate its commitment to sustainability, a company should report on how environmental and social issues affect its business, namely its business model, contributing to value creation. Thus, a reporting framework for business models that integrates sustainability is presented. In turn, a number of illustrative examples are examined to show how business model reporting can be used to provide effective and integrated sustainability reporting. The book also offers a broad analysis of corporate sustainability reporting, which includes a discussion of the theoretical background, an explanation of why companies provide sustainability reporting, the current regulatory framework for sustainability disclosure, and a review of sustainability reporting literature that shows the characteristics of sustainability disclosure practices. Given its scope, the book will be of interest to all researchers and practitioners for companies or organizations that aim to support, implement and improve their sustainability reporting, by adopting a more integrated approach that interconnects environmental and social aspects with the economic and financial results via the business model. The book offers a valuable reference guide for social science researchers, including PhD students, interested in a discussion of the latest developments in sustainability, corporate social responsibility, and the communication of business models.

Other improvements have shortened and simplified chapters, increased the numbers and types of pedagogical supplements, and expanded the international appeal of examples.

This investigation proposes a conceptual framework for measurement necessary for an analysis of household finance and economic development. The authors build on and, where appropriate, modify corporate financial accounts to create balance sheets, income statements, and statements of cash flows for households in developing countries, using an integrated household survey. The authors also

illustrate how to apply the accounts to an analysis of household finance that includes productivity of household enterprises, capital structure, liquidity, financing, and portfolio management. The conceptualization of this analysis has important implications for measurement, questionnaire design, the modeling of household decisions, and the analysis of panel data.
