Written by leading finance authors Gene Brigham and Phillip Daves, this reader-friendly presentation blends in-depth discussions of core financial management issues with the most current coverage of topics reshaping finance today, including the unfolding impact of the global pandemic and the consequences of the 2017 Tax Cuts and Jobs Act. This comprehensive edition balances theory with practical application, using corporate valuation as a unifying theme to emphasize the theoretic groundwork for value maximization. Financial Management: Theory & Practice Cengage Learning

The first course in finance for finance and business majors has traditionally focused solely on managerial (or corporate) finance. Now, many schools are indicating a need to introduce these students -- particularly the non-finance business majors -- to the other two major components of finance -- institutions and investments -- in this first course but at the same level of rigour as traditional financial management texts. The Dryden Press has answered this call with Principles of Finance. This text begins with a discussion of the principles of financial systems and business organizations, moves on to valuation concepts, and then corporate decision making (managerial finance). It concludes with coverage of investment fundamentals. Key chapters may be covered in a one-term course or supplemented with cases and outside readings for a two-term course. Chapters are written in a flexible, modular format, allowing instructors to cover the material in a different sequence if desired.

The eighth edition of this successful text provides a comprehensive and contemporary introduction to financial management, focusing on shareholder wealth maximization and cash flow management, the international aspects of financial management, the ethical behavior of managers, and the increased impact of the Internet in business practice. In addition, content has been added or enhanced to reflect the changing focus on finance areas including topics such as discounted payback period, dividend practices of foreign firms, risk management, and real options.
