This volume explores the twenty-first century classroom as a uniquely intergenerational space of religious disaffiliation, and questions about how our work in the classroom can be, and is being, re-imagined for the new generation. The culturally hybrid identity of Millennials shapes their engagement with religious "others" on campus and in the classroom, pushing educators of comparative theology to develop new pedagogical strategies that leverage ways of seeing and interacting with their teachers and classmates. Reflecting on religious traditions such as Islam, Judaism, African Traditional Religions, Hinduism, Christianity, and agnosticism/atheism, this volume theorizes the theological outcomes of current pedagogies and the shifting contours of comparative theological discourse.

The essential introduction to the principles and applications of feedback systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback

systems. Now more user-friendly than ever, this revised and expanded edition of Feedback Systems is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory

This collective volume takes a social scientific approach to the subject of violence. Violence manifests itself on different levels, often beyond our comprehension. The book comprises 15 chapters in which experts from different academic disciplines and backgrounds examine violence carefully, logically, and in a challenging way. Although it is written from South African perspectives, it is relatable to other countries. As a source aimed at local and international scholars, researchers, and peers, it invites open and critical discussion. The arguments are presented systematically, intersectionally and constructively. It focuses on violence as an evolutionary phenomenon; on how it affects children; on interpersonal, collective, and structural violence; on ecological violence, and on violence as metaphor, amongst others.

This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.
