The relationship between health and law is not new but the relation is multifaceted. Law and health are both subjects with an inherent dynamism. Health and law as a curricular subject of law is a recent addition and is taught in law colleges under many universities. This edited book tries to focus on the intersection between law and health. It is divided into five extensive sections: Concept of Health; Medical Profession, Patient and the Law; Organisation of Public Health Care and Medical Jurisprudence; Insurance and Victim Compensation; and Health Legislative Perspective. The book will be helpful to prepare a foundation for understanding and analysis of advanced knowledge in the field of health and its relationship with law. This book will also be helpful for the teachers, students, researchers, lawyers, judges, law firms, medical professionals, academics, libraries, law universities and anyone interested in the subject.

*The US Department of Justice's National Institute of Justice (NIJ) asked the Institute of Medicine (IOM) of The National Academies to conduct a workshop that would examine the interface of the medicolegal death investigation system and the criminal justice system. NIJ was particularly interested in a workshop in which speakers would highlight not only the status and needs of the medicolegal death investigation system as currently administered by medical examiners and coroners but also its potential to meet emerging issues facing contemporary society in America.*

*Additionally, the workshop was to highlight priority areas for a potential IOM study on this topic. To achieve those goals, IOM constituted the Committee for the Workshop on the Medicolegal Death Investigation System, which developed a workshop that focused on the role of the medical examiner and coroner death investigation system and its promise for improving both the criminal justice system and the public health and health care systems, and their ability to respond to terrorist threats and events. Six panels were formed to highlight different aspects of the medicolegal death investigation system, including ways to improve it and expand it beyond its traditional response and meet growing demands and challenges. This report summarizes the Workshop presentations and discussions that followed them.*

*North-East India, comprising the seven contiguous states around Assam, the principal state of the region, is a relatively unknown, yet very fascinating region. The forest clad peripheral mountains, home to indigenous peoples like the Nagas, Mizos and the Khasis, the densely populated Brahmaputra valley with its lush green tea gardens and the golden rice fields, the moderately populated hill regions and plateaus, and the sparsely inhabited Himalayas, form a unique mosaic of natural and cultural landscapes and human interactions, with unparalleled diversity. The book provides a glimpse into the region's past and gives a comprehensive picture of its physical environment, people, resources and its economy. The physical environment takes into account not only the structural base of the region, its physical characteristics and natural vegetation but also offers an impression of the region's biodiversity and the measures undertaken to preserve it. The people of the region, especially the indigenous population, inhabiting contrasting environments and speaking a variety of regional and local dialects, have received special attention, bringing into focus the role of migration that has influenced the traditional societies, for centuries. The book acquaints the readers with spatial distribution, life style and culture of the indigenous people, outlining the unique features of each tribe. The economy of the region, depending originally on primitive farming and cottage industries, like silkworm rearing, but now greatly transformed with the emergence of modern industries, power resources and expanding trade, is reviewed based on authentic data and actual field observations. The epilogue, the last chapter in the book, summarizes the authors' perception of the region and its future.*

*Textbook of Forensic Medicine and Toxicology is a comprehensive book for undergraduate students of Forensic sciences. The book comprises chapters on thanatology, deaths from other causes, forensic psychiatry, forensic science, corrosive poisons, irritant poisons, and poisons acting on the brain and spinal cord. In addition, the book consists of several diagrams and illustrations to help understand the concepts better. This book is essential for forensic scientists.*

Principles Of Forensic Medicine Including Toxicology

*Principles of Forensic Medicine is a concise, practical guide for anyone working in the field of forensic medicine. Frontline police surgeons, forensic physicians, forensic medical officers and forensic medical examiners will find this book invaluable in defining good practice, as viewed by a senior police surgeon responsible for establishing one of the leading training courses in the UK. Additionally, those involved less directly with police custody or forensic assessment, especially those working purely in child or adult sexual abuse, will benefit from the wealth of information contained in this book. Dr Robinson has placed special emphasis on the importance of communication, consent, confidentiality, record keeping, statement and report writing. His text is fully referenced and provides an immediate source of precedent and vital information for any situation concerning patients in police custody or individuals for whom forensic assessment is required. The role of forensic physicians in court is highlighted and police officers, particularly custody officers and criminal investigation teams, lawyers and judiciary will learn much from Principles of Forensic Medicine and gain a full understanding of the duties and ethical requirements of the doctor within the criminal medicolegal context.*

*Despite a history of more than 30 years, forensic anthropology is, in many ways, still in its infancy. Its early practitioners were by necessity self-taught, and the field has developed in a largely reactionary, ad hoc manner. This text, designed for advanced undergraduate and graduate coursesin forensic anthropology, provides information that reflects the current and future needs of this rapidly professionalizing field. It unites theoretical and methodological knowledge drawn from anthropology and the forensic sciences and offers thought-provoking case studies and discussion. Co-writtenby a foremost authority in the field of forensic anthropology and an anthropologist whose fieldwork for a medical examiner's office has included forensic identification in Bosnia, Kosovo, Iraq, and Darfur, this volume is the first comprehensive forensic anthropology text; it examines medical, legal,ethical, and humanitarian issues associated with forensic anthropology, biohistory (the use of modern forensic methods in identifying remains of prominent historical figures), and current forensic methods.*

*This kind of literary work certainly would be foundation for the major work in future. I am sure that this book would immensely help among the student community those who would like to improve their knowledge in Toxicology*
