pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective. The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes, but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts
