This book constitutes the refereed proceedings of the Third International Workshop on Principles and Practice of Semantic Web Reasoning, PPSWR 2005, held in Dagstuhl Castle, Germany in September 2005. The 12 revised full papers presented together with 3 invited contributions were carefully reviewed and selected for inclusion in the book. The major aspects of semantic Web research are addressed in the papers, namely semantic Web architectures, language issues, and formal reasoning methods. The advances are investigated in the context of new design principles and challenging applications.

This volume contains papers selected for presentation at the 31st Annual Conference on Current Trends in Theory and Practice of Informatics – SOFSEM 2005, held on January 22–28, 2005 in Liptovský Ján, Slovakia. The series of SOFSEM conferences, organized alternately in the Czech Republic and Slovakia since 1974, has a well-established tradition. The SOFSEM conferences were originally intended to break the Iron Curtain in scientific change. After the velvet revolution SOFSEM changed to a regular broad-scope international conference. Nowadays, SOFSEM is focused each year on selected aspects of informatics. This year the conference was organized into four tracks, each of them complemented by two invited talks: – Foundations of Computer Science (Track Chair: Bernadette Charron-Bost) – Modeling and Searching Data in the Web-Era (Track Chair: Peter Vojtáš) – Software Engineering (Track Chair: Mária Bieliková) – Graph Drawing (Track Chair: Ondrej Syk) The aim of SOFSEM 2005 was, as always, to promote cooperation among professionals from academia and industry working in various areas of informatics. Each track was complemented by two invited talks. The SOFSEM 2005 Program Committee members coming from 13 countries evaluated 144 submissions (128 contributed papers and 16 student research papers). After a careful review process (counting at least 3 reviews per paper), followed by detailed discussions in the PC, and a co-chairs meeting held on October 8, 2005 in Bratislava, Slovakia, 44 papers (overall acceptance rate 34).

Abstract State Machines 2004. Advances in Theory and Practice

First International Conference, CP '95, Cassis, France, September 19 - 22, 1995. Proceedings

Abstract state machines (ASM) sharpen the Church-Turing thesis by the consideration of bounded resources for computing devices. They view computations as an evolution of a state. It has been shown that all known models of computation can be expressed through specific abstract state machines. These models can be given in a representation-independent way. That is one advantage of transferring these models to ASM. The main advantage is, however, to provide a unifying theory to all of these models. At the same time ASM can be refined to other ASMs. Stepwise refinement supports separation of concern during software development and will support component-based construction of systems thus providing a foundation of new computational paradigms such as industrial programming, programming-in-the-large, and programming-in-the-world. ASM 2004 continued the success story of the ASM workshops. Previous workshops were held in the following European cities: Taormina, Italy (2003); Dagstuhl, Germany (2002); Las Palmas de Gran Canaria, Spain (2001); Monte Verita, Switzerland (2000); Toulouse, France (1999); Magdeburg, Germany (1998); Cannes, France (1998, 1997); Paderborn, Germany (1996); and Hamburg, Germany (1994). The ASM workshops have had predecessors, e.g., the famous Lipari Summer School in 1993, whose influential outcome was the fundamental Lipari Guide.

This new edition continues to promote reflection and critical thinking about the practice of children's nursing and professional development.

This book examines democracy and governance from the unconventional and largely under researched vantage point of information. It looks at the exclusionary informational dynamics in democracy and analyses the role of information capitalism, new technology, virtual networks, cyberspace and media. While emphasizing the foundational value of information as the basis of democracy, the book explains how it is strategically maneuvered in technologies of governance in so-called established and credible democracies. It studies the neutralization and subversion as well as the complex, nuanced and multidimensional act of othering of people, who are supposed to be the repository of power in democracy and in whose interest the business of governance is explained. It also examines the challenges of technocratic interpretations, stunted public policy communication, hyped information society, cooption through the state-of-the-art capitalism, rhetoric of virtual networks and the often-unilateral agenda of mainstream media. A major intervention in understanding the nature of contemporary democracy and polity, this volume will be of great interest to scholars and students of political communication and technology studies.

EBOOK: PRINCIPLES & PRACTICE M

Explains construction professional practice in an appealing, succinct, and relatively informal way This book details the management of construction projects from beginning to end, concentrating on the principles underlying what construction professionals like architects do. It covers the entire process—from the initial meetings with clients through the design, recruitment of a contractor, contract management, construction, and handover—all without referencing legal cases, contract clause numbers, laws, statutes, or the complex jargon that can muddle comprehension. The first part of Professional Practice for Architects and Project Managers offers enlightening chapters that cover: professional standards, perks of the job, bonds and parent company guarantees, office meetings, letter writing, the RIBA Plan of Work, and Building Information Modelling (BIM). The second section teaches all about dealing with the clients, and includes chapters that discuss the extent of services, fee negotiations, conflicts of interest, and more. Next the book looks at such on-the-job responsibilities as surveys, ground investigations, cost estimates, work schedules, letters of intent, etc. The final section goes over everything readers need to know about dealing with a building contract in progress, informing them about advance payments, insurance, site inspections, contractor disputes, terminations, final certificates, and more. Details the entire process of managing a construction project, including dealing with clients, the design process, running a construction project, and more Highlights what the construction

professionals do in their positions Shows how principles of construction management are applied in practice Written in a reader-friendly and accessible way Professional Practice for Architects and Project Managers is an excellent resource for architects and other construction professionals such as contract administrators, project managers, quantity surveyors, and contractors.

Rediscover the classic guide for recovery with this tenth anniversary edition “that transcends genres by seamlessly integrating the 12-Step approach, Buddhist principles, and a compelling personal struggle with addiction and a quest for spiritual awakening” (Donald Altman, author of Living Kindness). The face of addiction and alcoholism is recognizable to many—it may be a celebrity, a colleague, or even a loved one. And though the 12-step program by itself can often bring initial success, many addicts find themselves relapsing back into old ways and old patterns, or replacing one addiction with another. Working with the traditional 12-step philosophy, Darren Littlejohn first shares his own journey, and how he came to find the spiritual solace that has greatly enhanced his life in recovery. Then, he details out how his work integrating Buddhism into the traditional 12-step programs validates both aspects of the recovery process. With accessible prose and in-depth research, he illustrates how each step—such as admitting there is a problem, seeking help, engaging in a thorough self-examination, making amends for harm done, and helping other addicts who want to recover—fits into the Bodhisattva path. This integration makes Buddhism accessible for addicts, and the 12 steps understandable for Buddhists who may otherwise be at a loss to help those in need. The 12-Step Buddhist is designed to be a complimentary practice to the traditional 12-step journey, not a replacement. While traditional programs help addicts become sober by removing the drug of choice and providing a spiritual path, they rarely delve deep into what causes people to suffer in the first place. In this “unique synthesis of the traditional 12-Step model and the liberating wisdom of Dharma” (Mandala Magazine), addicts can truly find a deep, spiritual liberation from all causes and conditions of suffering—for good.

·In what ways is counselling relevant to contemporary social work? ·How do counselling skills integrate with social work roles and responsibilities? This book examines these skills and their applicability, drawing from social work and counselling theories and methods using clear, practical examples. Skills are discussed with reference to social work knowledge and values illustrating how, when used competently, contextually and sensitively they can appropriately underpin good social work practice. Questions and activities for self development are linked to the practices discussed. This new edition of Counselling Skills in Social Work Practice has been thoroughly revised to reflect the National Occupational Standards for social work which identify the importance of communication skills and a developmental understanding of people in their social contexts. The chapters are linked to the six key roles for social work practice. This book builds on the strengths of the first edition, as well as addressing the challenges of practice in relevant legislative and policy contexts. The book includes: ·Evidence of how the competencies which underpin counselling practice are directly transferable to effective social work practice ·Practical advice on communication skills ·Examples of how to build effective working relationships; a whole chapter is now devoted to the specific skills required for working within inter-agency and multi-disciplinary teams This book is key reading on the subject of ethical and effective social work for those teaching, studying or practising in the field.

Leading psychologist, lecturer, and author Windy Dryden has compiled his most valuable writings on Rational Emotive Behaviour Therapy from the last thirty five years. This collection reveals the thinking, concepts and practical experience that have made Dryden one of the most respected and cited REBT authorities of our time. Dryden has authored or edited over 19 books and established Europe's first Masters in REBT. While his primary allegiance remains with REBT, he has published extensively on CBT and the wider issues of psychotherapy. Dryden's pluralistic perspective on REBT comes through in such seminal pieces as: The therapeutic alliance in rational-emotive individual therapy Compromises in rational-emotive therapy Adapting CBT to a broad clientele Unconditional self-acceptance and self-compassion
