Over the last decade Peru has consistently been the fastest-growing economy in Latin America, and unlike some of its neighbours, has been remarkably resilient to global headwinds, registering positive growth rates for an uninterrupted 18 years through to 2016. While the pace of growth has slowed as the long commodities boom ebbed after 2012, Peru recorded an average annual growth rate of 5.9% in 2005-15, almost double the 3% rate for Latin America as a whole. Stakeholders and investors will now be looking to efforts by the new government, which took office in July 2016, to address problems, implement additional reforms and spur further economic growth.

Understanding Bangladesh’s Unexpected Success

DPE Annual Report

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

From an unpromising start as 'the basket-case' to present day plaudits for its human development achievements, Bangladesh plays an ideological role in the contemporary world order, offering proof that the neo-liberal development model works under the most testing conditions. How were such rapid gains possible in a context of chronically weak governance? The Aid Lab subjects this so-called 'Bangladesh paradox' to close scrutiny, evaluating public policies and their outcomes for poverty and development since Bangladesh's independence in 1971. Countering received wisdom that its gains owe to an early shift to market-oriented economic reform, it argues that a binding political settlement, a social contract to protect against the crises of subsistence and survival, united the elite, the masses, and their aid donors in the wake of the devastating famine of 1974. This laid resilient foundations for human development, fostering a focus on the poorest and most precarious, and in particular on the concerns of women. In chapters examining the environmental, political and socioeconomic crisis of the 1970s, the book shows how the lessons of the famine led to a robustly pro-poor growth and social policy agenda, empowering the Bangladeshi state and its non-governmental organizations to protect and enable its population to thrive in its engagements in the global economy. Now a middle-income country, Bangladesh's role as the world's laboratory for aided development has generated lessons well beyond its borders, and Bangladesh continues to carve a pioneering pathway through the risks of global economic integration and climate change.

Compelled by the extent to which globalization has changed the nature of labor relations, Harry C. Katz, Thomas A. Kochan, and Alexander J. S. Colvin give us the first textbook to focus on the workplace outcomes of the production of goods and services in emerging countries. In Labor Relations in a Globalizing World they draw lessons from the United States and other countries to provide a menu of options for management, labor, and government leaders in emerging countries. They include discussions based in countries such as China, Brazil, India, and South Africa which, given the advanced levels of economic development they have already achieved, are often described as "transitional," because the labor relations practices and policies in these countries are still in a state of flux. Katz, Kochan, and Colvin analyze how labor relations functions in emerging countries in a manner that is useful to practitioners, policymakers, and academics. They take account of the fact that labor relations are much more politicized in emerging countries than in advanced industrialized countries. They also address the traditional role of unions in emerging countries and the recent increased importance of independent unions that have emerged as alternatives. These independent unions tend to promote firm- or workplace-level collective bargaining in contrast to the more traditional top-down systems. Katz, Kochan, and Colvin explain how multinational corporations, nongovernmental organizations, and national borders increasingly influence work and employment outcomes.

Recognising the different ways that capitalism is theorised, this book explores various aspects of contemporary capitalism in India. Using field research at a local level to engage with larger issues, it raises questions about the varieties and processes of capitalism, and about the different roles played by the state. With its focus on India, the book demonstrates the continuing relevance of the comparative political economy of development for the analysis of contemporary capitalism. Beginning with an exploration of capitalism in agriculture and rural development, it goes on to discuss rural labour, small town entrepreneurs, and technical change and competition in rural and urban manufacturing, highlighting the relationships between agricultural and non-agricultural firms and employment. An analysis of processes of commodification and their interaction with uncommodified areas of the economy makes use of the 'knowledge economy' as a case study. Other chapters look at the political economy of energy as a driver of accumulation in contradiction with both capital and labour, and at how the political economy of policy processes regulating energy highlights the fragmentary nature of the Indian state. Finally, a chapter on the processes and agencies involved in the export of wealth argues that this plays a crucial role in concealing the exploitation of labour in India. Bringing together scholars who have engaged with classical political economy to advance the understanding of contemporary capitalism in South Asia, and distinctive in its use of an interdisciplinary political economy approach, the book will be of interest to students and scholars of South Asian Politics, Political Economy and Development Studies.
