pavements based on engineered cementitious composites, which are exhibiting an extreme tensile strain capacity that is much higher than conventional concrete.

Access Free Geometry

Chapter11 Test

This enables the pavement to work without steel reinforcement and to embed a dynamic wireless power transfer technology for charging electric vehicles. At first, the

Access Free Geometry

Chapter11 Test

book presents a modified performance-driven design approach to improve the composites to achieve the optimum pavement design in terms of functional and structural performance. It

Access Free Geometry

Chapter11 Test

shows that the modified composites can be used to fulfil the safety and comfort factors without neglecting the characteristics of conventional ones.

Access Free Geometry

Chapter11 Test

Further, 3D finite element and fluid dynamics models are used to analyse the pavement properties. The validated models can predict the functional performance, including

skid resistance, surface water drainage, and noise. In the remaining part of the thesis, an environmentally-friendly photocatalytic function for pavement made of
