living by contributing to job and wealth creation. These types of ventures, regardless of their outstanding relevance, are the exception rather than the norm in that they account for only a very small percentage of entrepreneurial activity. Although not ignoring these important ventures, the main goal of this title is to fully unleash the wide potential of the entrepreneurial activity, exploring and highlighting the somewhat hidden part, which is ultimately responsible for the largest part of new businesses and, as a consequence, for the wellbeing of millions of people virtually everywhere. The Handbook of Research on Approaches to Alternative Entrepreneurship Opportunities is a collection of innovative research on the methods and applications of entrepreneurial activity beyond the

While highlighting topics including collective business, organizational performance, and generational differences, this book is ideally designed for entrepreneurs, developers, researchers, business managers, industry professionals, academicians, and students seeking to draw attention to distinctive and multifaceted types of entrepreneurship.

This volume explores the complex interrelationships between food and agriculture, politics, and society. More specifically, it considers the political aspects of three basic economic questions: what is to be produced? how is it to be produced? how it is to be distributed? It also outlines three unifying themes running through the politics of answering these societal questions with regard to food, namely: ecology, technology and property.

Instrument Engineers'

Handbook, Volume One

A Handbook of Politics

Evangelicalism, a faith with which 1 in 4 American adults identifies, exerts an enormous impact on American society. Its story typically begins in the Seventies and is portrayed as a reaction to the social revolution of the Sixties. But the beginnings of evangelicalism as a distinctive American subculture date to the dawn of the Media Age.

With the arrival of radio, evangelicals flocked to the airwaves. For the first time, they developed their own mass culture as evangelicals nationwide, across denominational lines, heard the same popular preachers and music. The Master's Radio captures the evangelical media and music culture of this pivotal midcentury era as evangelicals left behind the fundamentalism of the early twentieth century and prepared for the culturally engaged New Christian Right of the late twentieth century. To capture the

spirit of these times, The Master's Radio avoids dry historical writing with a narratively driven "historical ethnography" that presents the era's major radio evangelists and songwriters in the own words--not only from their writings and recordings but from songbooks, record liner notes, and "song story" anthologies of the period. The Master's Radio is sure to become the standard work on the midcentury rise of evangelical mass culture. The Routledge Handbook of Tourism Cities presents an

up-to-date, critical and comprehensive overview of established and emerging themes in urban tourism and tourist cities. Offering socio-cultural perspectives and multidisciplinary insights from leading scholars, the book explores contemporary issues, challenges and trends. Organised into four parts, the handbook begins with an introductory section that explores contemporary issues, challenges and trends that tourism cities face today. A range of topics are explored, including sustainable urban

tourism, overtourism and urbanisation, the impact of terrorism, visitor-host interactions, as well as reflections on present and future challenges for tourism cities. In Part II the marketing, branding and markets for tourism cities are considered, exploring topics such as destination marketing and branding, business travellers and exhibition hosting. This section combines academic scholarship with real-life practice and case studies from cities. Part III discusses product and technology developments

for tourism cities, examining their supply and impact on different travellers, from open-air markets to creative waterfronts, from social media to smart cities. The final Part offers examples of how urban tourism is developing in different parts of the world and how worldwide tourism cities are adapting to the challenges ahead. It also explores emerging forms of specialist tourism, including geology and ecology-based tourism, socialist heritage and post-communist destination

tourism. This handbook fills a notable gap by offering a critical and detailed understanding of the diverse elements of the tourist experience today. It contains useful suggestions for practitioners, as well as examples for theoretical frameworks to students in the fields of urban tourism and tourism cities. The handbook will be of interest to scholars and students working in urban tourism, heritage studies, human geography, urban studies and urban planning, sociology, psychology and business studies.

This handbook provides practical, technological information on the toxicological aspects of dangerously hazardous chemicals, the design and maintenance of facilities for processing them, as well as preventive and mitigative procedures for controlling their accidental release. Key areas of industrial toxicology, including major routes of occupational exposure, and general toxic properties of selected chemicals, are discussed.
