fascinating book,
investigative

A visionary intelligence officer, William Godel, realized that the key to winning the war in Vietnam was not outgunning the enemy, but using new information technology to understand their motives and

anticipate their
movements. This
idea -- using

computers to spy on
people and groups
perceived as a threat,
both at home and
abroad -- drove
ARPA to develop
the internet in the
1960s, and continues
to be at the heart of

the modern internet
we all know and use
today. As Levine
shows, surveillance
wasn't something
that suddenly
appeared on the
internet; it was
woven into the
fabric of the
technology. But this
isn't just a story

about the NSA or other domestic programs run by the government. As the book spins forward in time, Levine examines the private surveillance business that powers tech-industry giants like Google, Facebook, and Amazon,

their users for profit,
all while doing
