Water is the most valuable resource and the most passionately contested. Drought has become an increasingly extreme problem in many parts of the world, and it is predicted that 60% of the major cities in Europe will run short of water in the next decade. In industrialized countries per capita water usage continues to rise intractably, despite

strenuous efforts by environmentalists and resource managers to encourage conservation. Conflicts over water and environmental degradation from the overuse of resources are intensifying. Water is not merely a physical resource: in every cultural context it is densely encoded with social, spiritual, political and environmental meanings, and these have a powerful effect upon patterns of water use and upon the relationships between water users and suppliers. This book makes an in-depth

analysis of the meanings of water and considers how they are experienced and formed at an individual and societal level. Focusing on the River Stour in Dorset, Strang draws upon a wide range of data: ethnographic research, cultural mapping, local archives and folklore. She explores the controversies surrounding water ownership and management, and the social and political questions raised by water privatization in the UK. The topical nature of these issues and their global relevance make this book a vital

contribution to contemporary research on water and an essential read for anyone with an interest in getting under the surface of one of the worlds most important social and environmental issues.

There is a renewed global commitment to 'water for all'. Yet even though women are usually responsible for domestic water provision, their needs and voices continue to be marginalized in the development process. A close analysis of current policy and practice shows that organizations providing improved

water supplies to poor communities typically neglect the gendered nature of access to and control over water resources. The resulting gender bias causes inefficiencies and injustices in water provision and reduces the effectiveness of well-meant efforts. This book shows how, in different environmental, historical and cultural contexts, gender has been an important element in water provision. It draws on a wide range of first-hand material, analyzed from different disciplinary perspectives. Case studies include analysis of

the role of water in inhibiting the fight against HIV/AIDS in southern Africa, and the challenges of taking gender into account in large water projects in India and Nepal. Water justice is becoming an ever-more pressing issue in times of increasing water-based inequalities and discrimination. It features critical conceptual approaches, including analysis of environmental, social, cultural and legal issues surrounding the distribution and management of water. Illustrated with case studies of historic and contemporary water injustices and contestations around the world, the book lays new ground for challenging current water governance forms and unequal

Ecuador, where 600,000 people lack easy access to potable water, Erik Swyngedouw aims to reconstruct, theoretically and empirically, the political, social, and economic conduits through which water flows, and to identify how power relations infuse the metabolic transformation of water as it becomes urban. These flows of water which are simultaneously physical and social carry in their currents the embodiment of myriad social struggles and conflicts. The excavation of these flows narrates stories about the city's structure and development. Yet these flows also carry the potential for an improved, more just, and more equitable right to the city and its water. The flows of power that are captured

comparative politics, using brief insights from tools such as decision, social choice, and game theory to help you understand clearly why some explanations for political phenomena are stronger than others. Foundations concentrates on describing the core features of regimes and institutions and on analyzing how these fundamental attributes drive variation in the economic and political outcomes we care about most. This approach more closely replicates what comparative scholars do: constructing and testing theories on political phenomena over basic memorization of country-specific facts—to explain, rather than describe. Illustrated with current examples that show the application of theory, you will

Water scarcity is not simply the result of what nature has to offer but always involves power relations and political decisions. This volume discusses the politics of the freshwater crisis, specifically how access to water is determined in different regions and historical periods, how conflict is constructed and managed, and how identity and efforts to control water systems, through development, technologies, and institutions, shape one another. The book analyzes responses to the water crisis as efforts to mitigate water insecurity and as expressions

of collective identity that legitimate, resist, or seek to transform existing inequalities. The chapters focus on different processes that contribute to freshwater scarcity, including land use decisions, pollution, privatization, damming, climate change, discrimination, water management institutions and technology. Case studies are included from North and South America, Africa, Asia, Europe and New Zealand.

Across the South Asian region, water determines livelihoods and in some cases even survival. However, water also creates exclusions. Access to water, and its social organisation, are intimately tied up with power relations. This book provides an overview of gender,

equity and water issues relevant to South Asia. The essays empirically illustrate and theoretically argue how gender intersects with other axes of social difference such as class, caste, ethnicity, age and religion to shape water access, use and management practices. Divided into six thematic sections, each of which starts with an introduction of relevant concepts, debates and theories, the book looks at laws and rights; policies; technologies and intervention strategies. In all, the book clearly shows how understanding and changing the use, distribution and management of water is conditional upon understanding and accommodating gender relations. Published by Zubaan.

Grounded in social science theory and research, it highlights the importance of politics, history and culture in shaping water management practices and reform, and demonstrates how Africa has clearly been a laboratory for IWRM. While a new cadre of professionals made IWRM their mission, we show that poor women and men may not have always benefitted. In some cases IWRM has also offered a distraction from more critical issues such as water and land grabs, privatisation, the negative impacts of water permits, and a range of institutional ambiguities that prevent water allocations to small and poor water users. By critically examining the interpretations and challenges of IWRM, the book

Xinjiang is, like Tibet, one of China's autonomous regions. Despite the overwhelming attention scholars and activists have given to Tibet, Xinjiang has garnered relatively little attention. Never a quiescent place, however, it has seen one uprising after another, most recently in violent flare-ups over the cultural repression and economic exclusion of the local Muslim Uyghurs. Oil and Water, by anthropologist and photographer Tom Cliff, is the first book to turn the lens onto Han Chinese settlers. Using ethnographic vignettes, life histories, and arresting photographs, Cliff shows how large-scale

social and institutional structures, historical narratives, and national political imperatives have shaped the lives of ordinary Han settlers in Xinjiang. The book weaves together the individual threads of life histories to show what it means to be Han in this frontier zone. Along the way, Cliff makes a number of surprising points: for example, that the Communist Party is in fact more concerned with stability among the Han in frontier regions than Uyghur cooperation itself; or that the frontier is simultaneously seen as backward and ahead in that it is the testing ground for policies and practices that may later be put to use in the core. Most important, by shifting the focus away from often-studied state actions and Uyghur reactions and onto the daily experience of

Analysing how water development projects unfolded in five rural communities in Mozambique, Emily Van Houweling offers an alternative perspective on water and the politicised nature of water management in the region. Using a hydro-social cycle framework, she demonstrates how water is tied to everyday life in matrilineal Nampula and how social relations, gender roles, and local politics were reconfigured during the project. While centring the experience of community members, Van Houweling also includes the perspectives of project implementers, showing how project plans were translated and negotiated as they worked their way down to the

Employing the concept of organisational culture, Van Houweling reveals the tensions that resulted from different actors' decision-making processes and motivations, and illuminates possible explanations for the gaps between policy and practice. Southeast Asia contains four urban conglomerates of the sort that this study characterizes as Mega-Urban Regions â€" Jakarta, Manila, Bangkok and Ho Chi Minh. These locations are examined in this book, along with Taipei and Shanghai. Because the administrative boundaries of the cities at the core of these zones do not include the entire urban area, the significance of the broader urban community has largely escaped scholarly attention. The authors base their analysis on actual agglomeration size

In a world in which millions of people, particularly in developing countries, continue to lead lives plagued by illiteracy and ill-health, understanding the conditions that promote social welfare is of critical importance to political scientists and policy makers alike. Drawing on a multi-method study, from the late-nineteenth century to the present, of the stark variations in educational and health outcomes within a large, federal, multiethnic developing country - India - this book develops an argument for the power of collective identity as an impetus for state prioritization of social welfare. Such an argument not only marks an important break from the dominant negative perceptions of identity politics but also presents a novel

Water is a basic human need and a scarce commodity with increasing value to farmers, industries, and cities in an urbanizing world. It is unpredictable in supply and quality,

difficult to contain or direct, and notoriously difficult to manage well. Several trends -- climate change, the endurance of widespread global water poverty, intensifying competition among rival uses and users, and the vulnerability of critical freshwater ecosystems -- combine to intensify the challenges of governing water wisely, fairly, and efficiently. The twenty-seven chapters in *The Oxford Handbook of Water Politics and Policy* address such issues over the course of seven thematic sections. These themes reflect familiar frameworks in the water policy world, including water, poverty, and health; water and nature; and water equity and justice. Other sections look at emergent and contentious policy arenas, including the water/energy/food nexus and management of uncertainty in

students and a resource for researchers and practitioners engaged in the design and scaling of technologies for low-resource communities. The scope is broad, ranging from the development of mobile applications for low-literacy users to hardware and software solutions for providing electricity and water in remote settings. It is also highly interdisciplinary, drawing on methods and theory from the social sciences as well as engineering and the natural sciences. The opening section reviews the history of “ technology-for-development ” research, and presents a framework that formalizes this body of work and begins its transformation into an academic discipline. It identifies common challenges in development and explains the book ’ s iterative approach of “ innovation,

These thematic sections contain case studies from landmark research that directly integrates engineering innovation with technically rigorous methods from the social sciences. Each case study describes the design, evaluation, and/or scaling of a technology in the field and follows a single form, with common elements and discussion questions, to create continuity and pedagogical consistency. Together, they highlight successful solutions to development challenges, while also analyzing the rarely discussed failures. The book

concludes by reiterating the core principles of development engineering illustrated in the case studies, highlighting common challenges that engineers and scientists will face in designing technology interventions that sustainably accelerate economic development. Development Engineering provides, for the first time, a coherent intellectual framework for attacking the challenges of poverty and global climate change through the design of better technologies. It offers the rigorous discipline needed to channel the energy of a new generation of scientists and engineers toward advancing social justice and improved living conditions in low-resource communities around the world.

recently became a reality in many economies and societies. Yet the dimensions in which power regulation, social equity and democracy-building are connected with participation have been only tangentially analyzed for the water sector.

Understanding the growing interest in social participation involves appreciating the specificity of the contemporary period within its historic and geographic contexts as well as uncovering larger political, economic and cultural trends of recent decades which frame participatory actions. The book's five sections highlight key dimensions of contemporary water management that influence, and in turn are influenced by, social participation. These sections are: participation and indigenous water governance; participation and the dynamics of gender in water management; participation and river basin governance; participation and implementation of water management and

That passion is shared and made legible here, not just for other anglers, but for those who have never yet cast a line in the water. Why is it that catching fish—or even thinking about catching fish—can be so thrilling, so captivating? Why is it that time spent beside water can be imprinted so sharply in the memory? Why is it that what seems a simple act of casting a line and hoping can feel so rich in mystery? In this fascinating and challenging work, the author analyses the way water for drinking is produced, distributed, owned, acquired, and consumed in contrasting ways in different settings. From the taken-for-granted, all-purpose water, flowing out of taps in advanced economies to extreme inequalities of access to water of variable qualities, drinking water tells its own interesting story, but also reflects some of the centrally important characteristics of the state and economies of the different countries. From sparkling mineral water in Germany, to drinking water garages in Taiwan, from water tankers in Mexico City to street vendors in Delhi markets, comparisons are made to

stretch our understanding of what we mean by 'an economy', quality, and property rights, of water. In addition, the study of socio-economics of drinking water provides a route into understanding interactions between polity, economy and nature. One of the major themes of the book is to analyse the 'sociogenic' nature of sustainability crises of economies of water in their environmental settings: epidemics, droughts, pollution, land subsidences and floods. Overall it develops an economic sociology, neo-Polanyian approach in a comparative and historical exploration of water for domestic consumption.
